## Foreword

**T**his annual publication gathers detailed statistics for inward and outward foreign direct investment flows and positions (stocks) of OECD countries. Comparative tables and charts for OECD countries and eight non-OECD G20 countries complement the information included for the statistics of each OECD country broken down by partner countries worldwide and by economic activity. The aim is to provide a reliable and comprehensive source of information to OECD governments, potential investors, globalization analysts and the public at large. FDI database used for this publication is updated regularly from national sources of OECD countries and provides the basis for periodical analyses of direct investment trends and for regular examinations of policies towards international direct investment in Member countries.

This publication was prepared by Emilie Kothe with the supervision of Michael Gestrin of the Investment Division but could not have been achieved without the contributions of the experts of the OECD Working Group on International Investment Statistics of the Investment Committee and the national administrations which they represent.

## Introduction

**P**reliminary estimates for 2013 indicate that the recovery of cross-border investments is proving elusive after the 24% decline recorded in 2012: global foreign direct investment flows increased by only 4.5% in 2013, to USD 1 333 billion, and remain over 30% below the pre-crisis levels reached in 2007.

This sluggish performance would seem to owe to a number of sources of uncertainty that are discouraging Multinational Enterprises (MNEs) from investing, including persistent Eurozone sluggishness, slowing growth in China, and fears regarding the financial stability of emerging markets in general. Recently heightened geopolitical tensions in eastern Ukraine, the Korean peninsula, and the Middle East are probably also moderating the international investment ambitions of MNEs. This would seem to be reflected in international M&A activity, a strong leading indicator for FDI, which was down sharply in the first quarter of 2014.

In 2013, almost 50% of global FDI inflows were hosted by only five countries: China, the United States, Brazil, Canada and Russia. The United States maintained its position as the leading investing economy, although it recorded an annual decline for the second consecutive year. Other significant investing countries in 2013 were Japan, China and Russia. FDI inflows and outflows of Russia reached particularly significant levels in 2013, boosted by the TNK-BP Rosneft deal involving the British Virgin Islands.

In the OECD area as a whole, FDI inflows to the region increased by 11% in 2013 (to USD 641 billion), while OECD investment abroad remained stable at USD 933 billion (a decline of only 2%). Furthermore, the equity component of FDI flows shrank in 2013, in part due to heightened disinvestments, while inter-company debt and re-invested earnings increased. Similarly, G20 inflows grew by 11% while outflows declined by 6%, although in this case the decline was completely due to the OECD-G20 countries. FDI outflows by other G-20 countries increased by 41%. European Union inflows increased by 14% while outflows increased by 6% in 2013.

The increase in FDI flows to many OECD countries was mainly due to intra-company loans, as equity transactions in the area as a whole decreased by around 13% partly as a result of disinvestments. For example, FDI inflows increased by 45% in Canada (from USD 43 billion to USD 62 billion) and they doubled in Germany. Some countries, like Italy, Mexico or the United States, did experience increases in FDI inflows due to equity transactions rather than intercompany loans. In all, FDI inflows in Italy, Mexico and the United States reached respectively USD 17 billion (as compared to USD 0.1 billion in 2012), USD 35 billion (as compared to USD 17 billion) and USD 193 billion (as compared to USD 166 billion).

One of the effects of the economic crisis would seem to have been an increase in international divestment. This is reflected in the increase in reported negative FDI inflows, e.g. Belgium at USD -2 billion, Finland at USD -1 billion, Poland at USD -6 billion and Switzerland at USD -5 billion. Not all declined were due to disinvestments though. The case of France highlights how different components of FDI can affect overall flows. Although equity transactions in France remained stable between 2012 and 2013, overall FDI inflows fell by 80% (from USD 25 billion to USD 5 billion), mostly due to significant loans extended by foreign affiliates to their parents (as a result, net inflows of intercompany debt were negative).

At USD 933 billion, OECD's FDI outflows represented 73% of global outflows in 2013. In the same period, the United States, the largest single investing economy world-wide, recorded USD 360 billion outflows which accounted for around 30% of global outflows (or 39% of OECD or 42% of G20 economies). Other significant investing countries in 2013 were Japan (at USD 138 billion), China (at USD 73 billion) and Russia (at USD 70 billion) boosted by the TNK-BP-Rosneft deal involving the British Virgin Islands. FDI outflows of Japan increased for the second consecutive year (11% in 2013 and 7% in 2012): the increase observed in 2013 was due to equity transactions, while in 2012 it was boosted by intercompany loans and reinvested earnings.

Outward investments from Italy, Luxembourg and the Netherlands recovered from the drop observed in 2012. Alternatively, Canada, France, Germany and the United Kingdom recorded severe declines of their FDI outflows in 2013, while Belgium recorded negative FDI outflows for the second consecutive year. Most of these developments were due to disinvestments in equity.

OECD countries continue to be exporters of capital with net outflows of USD 376 billion in 2012 and of USD 293 billion in 2013. While the OECD area remains the major source of FDI flows worldwide, in 2012 only 62% of OECD outflows (90% in 2000) were targeted to other OECD countries, a development which confirms the growing diversification of OECD investments in terms of host countries. On the other hand, 83% (96% in 2000) of inflows in the OECD area was sourced by OECD countries. Nevertheless, as host of investment worldwide, the OECD's relative importance has been decreasing by almost one third in the last decade or so, when a growing number of non-OECD countries attracted foreign direct investment flows.

At end-2013, the stock of inward FDI for the OECD area as a whole was USD 15.2 trillion (or 32% of its GDP) while outward investments reached USD 20.1 trillion (or 43% of its GDP). The stock of OECD's direct investment at end-2013 was approximately ten times more than at end-1990. Regarding the economic sectors attracting FDI, the most dominant sector for OECD's direct investment is the service sector which accounted for 60% of its inward investment stocks at end-2012 and 65% of outward investments. This is followed by the manufacturing sector which represents 23% of inward investment stocks and 21% of outward investments.

The present publication relies on a database developed by the OECD Directorate for Financial and Enterprise Affairs for comprehensive statistics on foreign direct investment. The database is sourced by official FDI statistics of thirty-four OECD members published by Central Banks and/or National Statistical Offices. The statistics cover FDI transactions (financial and income flows) and positions (stocks). Data are broken down by bilateral partner countries (worldwide) and by economic activity. All the statistics in this publication are presented in United States dollars to facilitate cross-country comparison. However, the same data series can be accessed electronically in national currencies at <http://dx.doi.org/10.1787/idi-data-en>.

The publication is organized in two parts:

- i) **Part 1. Comparative tables** comprises tables and charts, in broad aggregates, providing an overview for the period 2004-13 of inward and outward FDI flows and positions of thirty four OECD countries and eight non-OECD members of the G-20. The data presented in this part are mostly derived from balance of payments and international investment position statistics and, therefore, may have minor differences from detailed foreign direct investment statistics presented in Part 2 and in some of the charts. In particular, in this section (except in Table 6 and in some of the charts), FDI flows of Luxembourg exclude Special Purpose Entities (SPEs) which are hosted in the country, while they include SPEs in Part 2. For most recent data, the reader may access quarterly releases of the FDI in Figures which may be downloaded from the OECD investment statistics web site: <http://www.oecd.org/investment/statistics.htm>.

ii) **Part 2. Country tables** represent the bulk of the publication. Its focus is FDI statistics of individual countries. For each OECD country, there are four standard tables on inward and outward FDI flows and positions for the period 2008-2012. The first two tables are geographical breakdowns of flows and positions by partner country; the other two tables present sectoral breakdowns according to ISIC3 (International Standard for Industry Sectors) classification. The publication covers a large selection of geographical and sectoral information; additional breakdowns are available and can be accessed at: <http://dx.doi.org/10.1787/idi-data-en>.

The methodology for foreign direct investment statistics is based on the OECD Benchmark Definition of Foreign Direct Investment, 3rd edition and the IMF Balance of Payments Manual, Fifth Edition. OECD Members have made efforts since the issuance of these manuals in 1995 to improve international comparability and in 2008 issued the Benchmark Definition of Foreign Direct Investment, 4th edition (BMD4), a significantly revised methodology. BMD4 comes into effect beginning in Q4 of 2014.

Direct investment is a category of cross-border investment made by a resident in one economy (the direct investor) with the objective of establishing at least 10% ownership interest in an enterprise (the direct investment enterprise) that is resident in an economy other than that of the direct investor.

Direct investment statistics cover all cross-border transactions and positions between enterprises which are a part of the same group of enterprises. FDI statistics include direct investment positions (equity and other capital), direct investment income flows (distributed earnings, reinvested earnings, interest income) and direct investment financial flows (equity, reinvested earnings and debt). While FDI financial flows inform on investment trends in a given period, FDI positions provide the basis for structural analysis.

The geographical allocation of FDI in this publication represents transactions/positions recorded for the first counterpart, i.e. for the immediate partner country (as opposed to ultimate investor or ultimate host). The classification for economic activity should, in principle, represent the activity of the direct investment enterprise, i.e. the activity of the resident direct investment enterprise for inward investments and the activity of the non-resident direct investment enterprise for outward investments.

## Notes

### **General notes:**

- Data in this publication are current up to 14 April 2014.
- FDI flows and FDI positions are converted using average exchange rates and end of period exchange rates, respectively. Data in national currencies are available and can be accessed at: <http://dx.doi.org/10.1787/idi-data-en>.
- Data exclude Special Purpose Entities (SPEs) for Austria, Hungary, Luxembourg (except in Comparative Table 6 and Country Tables 1 and 3) and the Netherlands.
- Global FDI: By definition, inward and outward FDI worldwide should be equal. However, in practice, there are statistical discrepancies between inward and outward FDI. Global FDI flows and stocks are estimated as the average of these two figures.

### **The following applies to Cyprus as partner country:**

- *Footnote by Turkey:* The information in this document with reference to “Cyprus” relates to the southern part of the Island. There is no single authority representing both Turkish and Greek Cypriot people on the Island. Turkey recognises the Turkish Republic of Northern Cyprus (TRNC). Until a lasting and equitable solution is found within the context of the United Nations, Turkey shall preserve its position concerning the “Cyprus issue”.
- *Footnote by all European Union member States of the OECD and the European Commission:* The Republic of Cyprus is recognised by all members of the United Nations with the exception of Turkey. The information in this document relates to the area under the effective control of the Government of the Republic of Cyprus.

### **The following applies to Israel as reporting country:**

- The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

### **Notes to Comparative Tables:**

- Tables 1, 2 and 4 are based on balance of payments (BOP) and international investment position (IIP) statistics and, hence, may be slightly different from disaggregated data provided in Country tables and some of the charts.
- OECD aggregate includes 34 member countries.

- G20 aggregate includes 19 countries: Argentina, Australia, Brazil, China, Canada, France, Germany, India, Indonesia, Italy, Japan, Korea, Mexico, Russia, Saudi Arabia, South Africa, Turkey, the United Kingdom, the United States.

**Notes to Country Tables:**

- Data for 2012 are preliminary.
- Tables 1 and 2:
  - ❖ “Total World” is the sum of FDI to/from all continents (Europe, Africa, America, Asia, and Oceania and Polar regions) and unallocated.
  - ❖ Partner area “OECD” includes 30 member countries until end 2009 and 34 members from 2010 onwards.
  - ❖ “Unallocated”: Investments not allocated to any specific continent.
- Tables 3 and 4: “Unallocated investment”: investment not allocated to any specific economic sector.

## **ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT**

The OECD is a unique forum where governments work together to address the economic, social and environmental challenges of globalisation. The OECD is also at the forefront of efforts to understand and to help governments respond to new developments and concerns, such as corporate governance, the information economy and the challenges of an ageing population. The Organisation provides a setting where governments can compare policy experiences, seek answers to common problems, identify good practice and work to co-ordinate domestic and international policies.

The OECD member countries are: Australia, Austria, Belgium, Canada, Chile, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The European Union takes part in the work of the OECD.

OECD Publishing disseminates widely the results of the Organisation's statistics gathering and research on economic, social and environmental issues, as well as the conventions, guidelines and standards agreed by its members.

## OECD International Direct Investment Statistics

Driven by technological change, global competition and the liberalisation of markets, intentional direct investment plays a key role in the process of global economic integration. OECD compiles and disseminates reliable and up-to-date statistics which are essential for a meaningful interpretation of investment trends for informed policy making. These statistics are based on official reports by OECD countries for investments world-wide. Internationally comparable data makes it possible to measure the degree of economic integration and competitiveness of markets.
