KEY WORLD ENERGY STATISTICS

IEA member countries:

- Australia
- Austria
- Belgium
- Canada
- Czech Republic
- Denmark
- Estonia
- Finland
- France
- Germany
- Greece
- Hungary
- Ireland
- Italy
- Japan
- Korea
- Luxembourg
- Netherlands
- New Zealand
- Norway
- Poland
- Portugal
- Slovak Republic
- Spain
- Sweden
- Switzerland
- Turkey
- United Kingdom
- United States

The European Commission
also participates in
the work of the IEA.

Foreword

The IEA was established in November 1974 to promote energy security and provide authoritative analysis on energy for its member countries and beyond. From the beginning, energy statistics have been and remain at the heart of all the work of the IEA. They provide a comprehensive view on energy production, transformation and final use, the factors that influence energy choices such as prices and RD&D and the wider impact of energy use on CO₂ emissions. Over the years with the cooperation of energy statisticians around the world, the IEA has gained recognition as one of the world's most authoritative sources for energy statistics.

The purpose of producing energy statistics is to use them to monitor changes in energy production and use, inform debate and provide a wider understanding of energy. In *Key World Energy Statistics (KWES)*, we look to highlight some of the key facts and trends from across the vast number of datasets the IEA produces to enable everyone to know more about energy. So if you want to know who are the top ten producers of oil or coal or the leading exporters of gas, what has been the evolution of electricity production since 1971, how energy use contributes to CO₂ emissions or if you simply want to see the world picture of energy production and use – that information and more is in *KWES*.

KWES is a summary of the comprehensive data made available by the IEA via its website: <http://www.iea.org/statistics/>. It is also available in app form for all major mobile devices.

Because energy plays such a vital role in our lives today, I hope that these statistics will not only inform but also help policymakers and others to make wise decisions so that energy is produced and consumed in a secure, affordable, efficient and sustainable manner.

As I like to say, in the world of energy, data always wins. I would therefore like to thank Duncan Millard, the IEA Chief Statistician and his excellent team for their work in ensuring we all have the data needed to gain a comprehensive understanding of energy.

Dr. Fatih Birol
Executive Director, International Energy Agency

Glossary

Total primary energy supply by fuel

World

World¹ total primary energy supply (TPES) from 1971 to 2014 by fuel (Mtoe)

1973 and 2014 fuel shares of TPES

1973

6 101 Mtoe

2014

13 699 Mtoe

1. World includes international aviation and international marine bunkers.
2. In these graphs, peat and oil shale are aggregated with coal.
3. Includes geothermal, solar, wind, heat, etc.

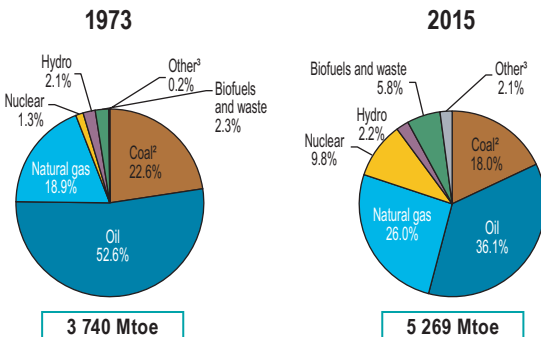

Total primary energy supply by fuel

OECD

OECD total primary energy supply¹ from 1971 to 2015 by fuel (Mtoe)

1973 and 2015 fuel shares of TPES¹

1. Excludes electricity trade.

2. In these graphs, peat and oil shale are aggregated with coal.

3. Includes geothermal, solar, wind, heat, etc.

Total primary energy supply by region

World

World total primary energy supply from 1971 to 2014
by region (Mtoe)

1973 and 2014 regional shares of TPES

1. Asia excludes China and OECD countries of Asia.

2. Includes international aviation and international marine bunkers.

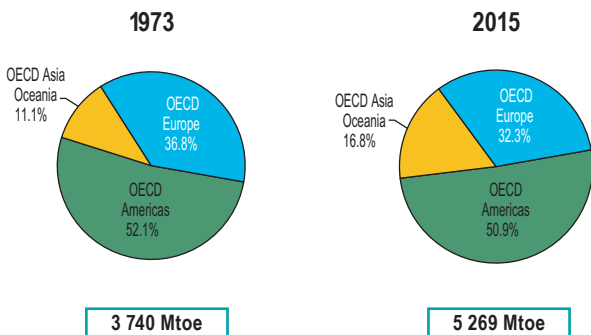

Total primary energy supply by region

OECD

OECD total primary energy supply¹ from 1971 to 2015
by region (Mtoe)

1973 and 2015 regional shares of TPES¹

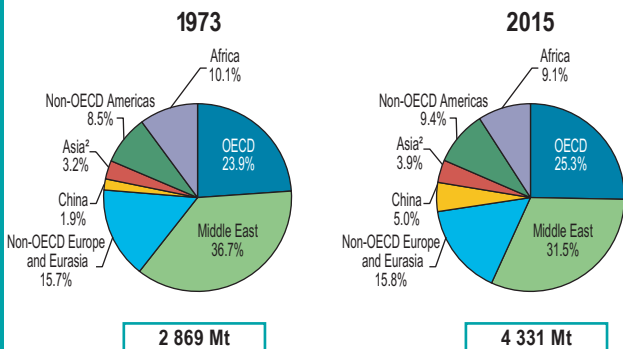

1. Excludes electricity trade.

Crude oil production

Crude oil¹ production from 1971 to 2015
by region (Mt)

1973 and 2015 regional shares of
crude oil¹ production

1. Includes crude oil, NGL, feedstocks, additives and other hydrocarbons.

2. Asia excludes China and OECD countries of Asia.

Producers, net exporters and net importers of crude oil¹

Producers	Mt	% of world total
Saudi Arabia	572	13.2
United States	567	13.1
Russian Federation	533	12.3
Canada	221	5.1
People's Rep. of China	215	5.0
Iraq	175	4.0
Islamic Rep. of Iran	168	3.9
United Arab Emirates	160	3.7

CO₂ Emissions by fuel

World¹ CO₂ emissions from fuel combustion²
from 1971 to 2014 by fuel (Mt of CO₂)

1973 and 2014 fuel shares of CO₂ emissions
from fuel combustion²

15 458 Mt of CO₂

32 381 Mt of CO₂

1. World includes international aviation and international marine bunkers.
2. CO₂ emissions from fuel combustion are based on the IEA energy balances and on the 2006 IPCC Guidelines, excluding emissions from non-energy.
3. In these graphs, peat and oil shale are aggregated with coal.
4. Includes industrial waste and non-renewable municipal waste.

CO₂ Emissions by region

World¹ CO₂ emissions from fuel combustion²
from 1971 to 2014 by region (Mt of CO₂)

1973 and 2014 regional shares of
CO₂ emissions from fuel combustion²

1. World includes international aviation and marine bunkers, which are shown together as Bunkers.
2. CO₂ emissions from fuel combustion are based on the IEA energy balances and on the 2006 IPCC Guidelines, excluding emissions from non-energy.
3. Asia excludes China and OECD countries of Asia.

Outlook for world TPES

(based on policies needed to limit global average temperature increase to 2 °C)

Total final consumption by sector in 2040

New Policies Scenario

12 244 Mtoe

450 Scenario

10 551 Mtoe

- In these graphs, peat and oil shale are aggregated with coal.
- Includes international aviation and marine bunkers.
- Includes biofuels and waste, geothermal, solar, wind, tide, etc.
- Based on a plausible post-2015 climate-policy framework to stabilise the long-term concentration of global greenhouse gases at 450 ppm CO₂-equivalent.

Outlook for world TPES

(Source: IEA, World Energy Outlook 2015)

TPES Outlook by region to 2040

NPS: New Policies Scenario
(based on policies under consideration)

450S: 450 Scenario³
(based on policies needed to limit global average temperature increase to 2 °C)

CO₂ emissions by region in 2040

New Policies Scenario

36 673 Mt of CO₂

450 Scenario

18 777 Mt of CO₂

1. Asia excludes China and OECD countries of Asia.
2. Includes international aviation and international marine bunkers.
3. Based on a plausible post-2015 climate-policy framework to stabilise the long-term concentration of global greenhouse gases at 450 ppm CO₂-equivalent.
CO₂ emissions are from fossil fuel combustion only.

² Defaults for OECD Europe were also applied to non-OECD Europe and Eurasia countries.

Selected country-specific gross calorific values

Natural gas

Top-ten producers in 2015	kJ/m ³
United States	38 267
Russian Federation	38 230
Islamic Republic of Iran	39 356
Qatar	41 400
Canada	39 000
People's Rep. of China	38 931
Norway	39 237
Saudi Arabia	38 000
Turkmenistan	37 889
Algeria	39 565

Note: To calculate the net calorific value, the gross calorific value is multiplied by 0.9.

Conventions for electricity

Figures for electricity production, trade, and final consumption are calculated using the energy content of the electricity (i.e. at a rate of 1 TWh = 0.086 Mtoe). Hydro-electricity production (excluding pumped storage) and electricity produced by other non-thermal means (wind, tide/wave/ocean, photovoltaic, etc.) are accounted for similarly using 1 TWh = 0.086 Mtoe. However, the primary energy equivalent of nuclear electricity is calculated from the gross generation by assuming a 33% conversion efficiency, i.e. 1 TWh = (0.086 ÷ 0.33) Mtoe. For geothermal and solar thermal, if no country-specific information is reported, the primary energy equivalent is calculated as follows:

- 10% for geothermal electricity;
- 50% for geothermal heat;
- 33% for solar thermal electricity;
- 100% for solar thermal heat.

Glossary

Coal	<i>Coal</i> includes all coal, both primary (including coking coal, steam coal and lignite) and derived fuels (including patent fuel, coke oven coke, gas coke, BKB, gas works gas, coke oven gas, blast furnace gas and other recovered gases). For presentational purposes, peat (including peat products) and oil shale are also included in this category where applicable.
Steam coal	<i>Steam coal</i> comprises anthracite, other bituminous coal and sub-bituminous coal.
Crude oil	<i>Crude oil</i> comprises crude oil, natural gas liquids, refinery feedstocks and additives as well as other hydrocarbons.
Oil products	<i>Oil products</i> comprises refinery gas, ethane, LPG, aviation gasoline, motor gasoline, jet fuels, kerosene, gas/diesel oil, fuel oil, naphtha, white spirit, lubricants, bitumen, paraffin waxes, petroleum coke and other oil products.
Natural gas	<i>Natural gas</i> includes both "associated" and "non-associated" gas.
Nuclear	<i>Nuclear</i> shows the primary heat equivalent of the electricity produced by a nuclear power plant with an average thermal efficiency of 33%.
Hydro	<i>Hydro</i> shows the energy content of the electricity produced in hydro power plants. Hydro output excludes output from pumped storage plants.
Biofuels and waste	<i>Biofuels and waste</i> comprises solid biofuels, liquid biofuels, biogases, industrial waste and municipal waste. Biofuels are defined as any plant matter used directly as fuel or converted into fuels (e.g. charcoal) or electricity and/or heat. Included here are wood, vegetal waste (including wood waste and crops used for energy production), ethanol, animal materials/wastes and sulphite lyes. Municipal waste comprises wastes produced by residential, commercial and public services, that are collected by local authorities for disposal in a central location for the production of heat and/or power.
Other	<p><i>Other</i> includes geothermal, solar, wind, tide/wave/ocean energy, electricity and heat. Unless the actual efficiency of geothermal and solar thermal is known, the quantity of geothermal and solar energy entering electricity generation is inferred from the electricity/heat production at geothermal and solar plants assuming an average thermal efficiency of:</p> <ul style="list-style-type: none">■ 10% for geothermal electricity;■ 50% for geothermal heat;■ 33% for solar thermal electricity;■ 100% for solar thermal heat. <p>For solar PV, wind and tide/wave/ocean energy, the quantities entering electricity generation are equal to the electrical energy generated. Direct use of geothermal and solar heat is also included here. Electricity is accounted for at the same heat value as electricity in final consumption (i.e. 1 GWh = 0.000086 Mtoe). Heat includes heat that is produced for sale and is accounted for in the transformation sector.</p>

Production	<i>Production</i> is the production of primary energy, i.e. coking coal, steam coal, lignite, peat, oil shale, crude oil, NGLs, natural gas, biofuels and waste, nuclear, hydro, geothermal, solar and the heat from heat pumps that is extracted from the ambient environment. Production is calculated after removal of impurities (e.g. sulphur from natural gas).
Imports and exports	<i>Imports</i> and <i>exports</i> comprise amounts having crossed the national territorial boundaries of the country, whether or not customs clearance has taken place. a) Oil and natural gas Quantities of crude oil and oil products imported or exported under processing agreements (i.e. refining on account) are included. Quantities of oil in transit are excluded. Crude oil, NGL and natural gas are reported as coming from the country of origin; refinery feedstocks and oil products are reported as coming from the country of last consignment. Re-exports of oil imported for processing within bonded areas are shown as exports of product from the processing country to the final destination. b) Coal <i>Imports</i> and <i>exports</i> comprise the amount of fuels obtained from or supplied to other countries, whether or not there is an economic or customs union between the relevant countries. Coal in transit is not included. c) Electricity Amounts are considered as imported or exported when they have crossed the national territorial boundaries of the country.
International marine bunkers	<i>International marine bunkers</i> covers those quantities delivered to ships of all flags that are engaged in international navigation. The international navigation may take place at sea, on inland lakes and waterways, and in coastal waters. Consumption by ships engaged in domestic navigation is excluded. The domestic/international split is determined on the basis of port of departure and port of arrival, and not by the flag or nationality of the ship. Consumption by fishing vessels and by military forces is also excluded.
International aviation bunkers	<i>International aviation bunkers</i> covers deliveries of aviation fuels to aircraft for international aviation. Fuels used by airlines for their road vehicles are excluded. The domestic/international split should be determined on the basis of departure and landing locations and not by the nationality of the airline. For many countries this incorrectly excludes fuel used by domestically owned carriers for their international departures.
Stock changes	<i>Stock changes</i> reflects the difference between opening stock levels on the first day of the year and closing levels on the last day of the year of stocks on national territory held by producers, importers, energy transformation industries and large consumers. A stock build is shown as a negative number, and a stock draw as a positive number.
Transfers	<i>Transfers</i> includes both interproduct transfers, products transferred and recycled products.

Total primary energy supply (TPES)	<i>Total primary energy supply (TPES)</i> is made up of production + imports – exports – international marine bunkers – international aviation bunkers ± stock changes. For the world total, international marine bunkers and international aviation bunkers are not subtracted from TPES.
Statistical differences	<i>Statistical differences</i> includes the sum of the unexplained statistical differences for individual fuels, as they appear in the basic energy statistics. It also includes the statistical differences that arise because of the variety of conversion factors in the coal and oil columns.
Electricity plants	<i>Electricity plants</i> refers to plants which are designed to produce electricity only. If one or more units of the plant is a CHP unit (and the inputs and outputs can not be distinguished on a unit basis) then the whole plant is designated as a CHP plant. Both main activity producers and autoproducer plants are included here.
Oil refineries	<i>Oil refineries</i> shows the use of primary energy for the manufacture of finished oil products and the corresponding output. Thus, the total reflects transformation losses. In certain cases the data in the total column are positive numbers. This can be due to either problems in the primary refinery balance or to the fact that the IEA uses regional net calorific values for oil products.
Other transformation	<i>Other transformation</i> covers non-specified transformation not shown elsewhere, such as the transformation of primary solid biofuels into charcoal.
Energy industry own use	<i>Energy industry own use</i> contains the primary and secondary energy consumed by transformation industries for heating, pumping, traction and lighting purposes [ISIC 05, 06, 19 and 35, Group 091 and Classes 0892 and 0721].
Losses	<i>Losses</i> includes losses in energy distribution, transmission and transport.
Total final consumption (TFC)	<i>Total final consumption (TFC)</i> is the sum of consumption by the different end-use sectors. Backflows from the petrochemical industry are not included in final consumption.
Industry	<i>Industry</i> consumption is specified in the following subsectors (energy used for transport by industry is not included here but reported under transport): <ul style="list-style-type: none">■ <i>Iron and steel industry</i> [ISIC Group 241 and Class 2431];■ <i>Chemical and petrochemical industry</i> [ISIC Divisions 20 and 21] excluding petrochemical feedstocks;■ <i>Non-ferrous metals</i> basic industries [ISIC Group 242 and Class 2432];■ <i>Non-metallic minerals</i> such as glass, ceramic, cement, etc. [ISIC Division 23];■ <i>Transport equipment</i> [ISIC Divisions 29 and 30];■ <i>Machinery</i> comprises fabricated metal products, machinery and equipment other than transport equipment [ISIC Divisions 25 to 28];

- Industry (ctd.)**
- *Mining (excluding fuels) and quarrying* [ISIC Divisions 07 and 08 and Group 099];
 - *Food and tobacco* [ISIC Divisions 10 to 12];
 - *Paper, pulp and printing* [ISIC Divisions 17 and 18];
 - *Wood and wood products* (other than pulp and paper) [ISIC Division 16];
 - *Construction* [ISIC Divisions 41 to 43];
 - *Textile and leather* [ISIC Divisions 13 to 15];
 - *Non-specified* (any manufacturing industry not included above) [ISIC Divisions 22, 31 and 32].
- Transport** *Transport* includes all fuels used for transport [ISIC Divisions 49 to 51]. It includes transport in industry and covers domestic aviation, road, rail, pipeline transport, domestic navigation and non-specified transport. Fuel used for ocean, coastal and inland fishing (included under fishing) and military consumption (included in other non-specified) are excluded from transport. Please note that international marine and international aviation bunkers are also included here for world total.
- Other** *Other* covers residential, commercial and public services [ISIC Divisions 33, 36-39, 45-47, 52, 53, 55, 56, 58-66, 68-75, 77-82, 84 (excluding Class 8422), 85-88, 90-99], agriculture/forestry [ISIC Divisions 01 and 02], fishing [ISIC Division 03] and non-specified consumption.
- Non-energy use** *Non-energy use* covers those fuels that are used as raw materials in the different sectors and are not consumed as a fuel or transformed into another fuel. Non-energy use also includes petrochemical feedstocks. Non-energy use is shown separately in final consumption under the heading *non-energy use*.

Unit abbreviations

bcm	billion cubic metres	MBtu	million British thermal units
Gcal	gigacalorie	Mt	million tonnes
GCV	gross calorific value	Mtoe	million tonnes of oil equivalent
GW	gigawatt	MWh	megawatt hour
GWh	gigawatt hour	PPP	purchasing power parity
kb/cd	thousand barrels per calendar day	t	metric ton = tonne = 1 000 kg
kcal	kilocalorie	TJ	terajoule
kg	kilogramme	toe	tonne of oil equivalent = 10 ⁷ kcal
kJ	kilojoule	TWh	terawatt hour
kWh	kilowatt hour	USD	United States dollar

Geographical coverage

OECD¹	Australia, Austria, Belgium, Canada, Chile, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, United Kingdom and United States.
Middle East	Bahrain, Islamic Republic of Iran, Iraq, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syrian Arab Republic, United Arab Emirates and Yemen.
Non-OECD Europe and Eurasia	Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus ² , Former Yugoslav Republic of Macedonia, Georgia, Gibraltar, Kazakhstan, Kosovo ³ , Kyrgyzstan, Latvia ⁴ , Lithuania, Malta, Republic of Moldova, Montenegro ³ , Romania, Russian Federation, Serbia ³ , Tajikistan, Turkmenistan, Ukraine and Uzbekistan.
China	People's Republic of China and Hong Kong (China).
Asia	Bangladesh, Brunei Darussalam, Cambodia, India, Indonesia, Democratic People's Republic of Korea, Malaysia, Mongolia, Myanmar, Nepal, Pakistan, Philippines, Singapore, Sri Lanka, Chinese Taipei, Thailand, Viet Nam and Other Asia.
Non-OECD Americas	Argentina, Bolivia, Brazil, Colombia, Costa Rica, Cuba, Curaçao ⁵ , Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Jamaica, Nicaragua, Panama, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay, Venezuela and Other Non-OECD Americas.
Africa	Algeria, Angola, Benin, Botswana, Cameroon, Congo, Côte d'Ivoire, Democratic Republic of Congo, Egypt, Eritrea, Ethiopia, Gabon, Ghana, Kenya, Libya, Mauritius, Morocco, Mozambique, Namibia, Niger, Nigeria, Senegal, South Africa, South Sudan, Sudan, Tanzania, Togo, Tunisia, Zambia, Zimbabwe and Other Africa.

1. OECD includes Estonia and Slovenia starting in 1990. Prior to 1990, data for these two countries are included in Non-OECD Europe and Eurasia.

2. Note by Turkey:

The information in this document with reference to "Cyprus" relates to the southern part of the Island. There is no single authority representing both Turkish and Greek Cypriot people on the Island. Turkey recognises the Turkish Republic of Northern Cyprus (TRNC). Until a lasting and equitable solution is found within the context of United Nations, Turkey shall preserve its position concerning the "Cyprus issue".

Note by all the European Union Member States of the OECD and the European Union:

The Republic of Cyprus is recognised by all members of the United Nations with the exception of Turkey. The information in this document relates to the area under the effective control of the Government of the Republic of Cyprus.

3. Serbia includes Kosovo from 1990 to 1999 and Montenegro from 1990 to 2004.

4. Latvia was not an OECD Member at the time of the preparation of this publication. Accordingly, Latvia does not appear in the list of OECD Members and is still included in the non-OECD aggregate.

5. The Netherlands Antilles was dissolved on 10 October 2010, resulting in two new constituent countries, Curaçao and Sint Maarten, with the other islands joining the Netherlands. However, due to a lack of detailed data, the IEA secretariat's data and estimates under the Netherlands Antilles still refer to the whole territory of the Netherlands Antilles as it was known prior to 10 October 2010 up to the end of 2011. Data refer only to the island of Curaçao from 2012. The other islands of the former Netherlands Antilles are added to Other Non-OECD Americas from 2012.

Note: The countries listed above are those for which the IEA secretariat has direct statistics contacts. This document is without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area. In this publication "country" refers to country or territory, as the case may be.

Statistics publications

Eight annual publications

World Energy Statistics 2016

A new publication from the IEA presenting comprehensive world energy statistics, previously presented in *Energy Statistics of OECD Countries* and *Energy Statistics of Non-OECD Countries*, *World Energy Statistics* contains detailed data on all energy sources – coal, gas, oil, electricity, renewables and waste. It covers energy supply and consumption for 150 countries and regions, including all OECD countries, over 100 other key energy producing and consuming countries, as well as world and regional totals. The book includes detailed tables by country in original units for the year 2014, and summary time series on production, trade, and final consumption by sector. It also presents provisional 2015 supply data for OECD countries, and initial 2015 estimates for non-OECD countries' production and trade of natural gas, primary coal and oil.

Published August 2016 - Price: Print €120; PDF €96

World Energy Balances 2016

A new release from the IEA presenting comprehensive energy balances for all the world's largest energy producing and consuming countries, *World Energy Balances* is formed by merging *Energy Balances of OECD Countries* and *Energy Balances of Non-OECD Countries*, previously published separately. The volume contains detailed data on the supply and consumption of energy for all OECD countries, over 100 other key energy producing and consuming countries, as well as world and regional totals. The book includes graphs and detailed data by country for all energy sources – coal, gas, oil, electricity, renewables and waste - expressed in balance format, for the year 2014. Alongside this, there are summary time series on production, trade, final consumption by sector, as well as key energy and economic indicators. The volume also presents provisional 2015 supply data for OECD countries, and initial 2015 estimates for non-OECD countries' production and trade of natural gas, primary coal and oil.

Published August 2016 - Price: Print €120; PDF €96

Electricity Information 2016

Electricity Information provides a comprehensive review of historical and current market trends in the OECD electricity sector, including 2015 provisional data. It provides an overview of the world electricity developments in 2014 covering world electricity and heat production, input fuel mix, supply and consumption, and electricity imports and exports. More detail is provided for the 34 OECD countries with information covering production, installed capacity, input energy mix to electricity and heat production, consumption, electricity trades, input fuel prices and end-user electricity prices. It provides comprehensive statistical details on overall energy consumption, economic indicators, electricity and heat production by energy form and plant type, electricity imports and exports, sectoral energy and electricity consumption, as well as prices for electricity and electricity input fuels for each country and regional aggregate.

Published August 2016 - Price: Print €150; PDF €120

Coal Information 2016

Coal Information provides a comprehensive review of historical and current market trends in the world coal sector, including 2015 provisional data. It provides a review of the world coal market in 2015, alongside a statistical overview of developments, which covers world coal production and coal reserves, coal demand by type, coal trade and coal prices. A detailed and comprehensive statistical picture of historical and current coal developments in the 34 OECD member countries, by region and individually is presented in tables and charts. Complete coal balances and coal trade data for selected years are presented on 22 major non-OECD coal-producing and -consuming countries, with summary statistics on coal supply and end-use statistics for about 40 countries and regions worldwide.

Published August 2016 - Price: Print €165; PDF €132

Natural Gas Information 2016

Natural Gas Information is a detailed reference work on gas supply and demand covering not only the OECD countries but also the rest of the world, this publication contains essential information on LNG and pipeline trade, gas reserves, storage capacity and prices.

The main part of the book concentrates on OECD countries, showing a detailed supply and demand balance for each country and for the three OECD regions: Americas, Asia-Oceania and Europe, as well as a breakdown of gas consumption by end user. Import and export data are reported by source and destination.

Published August 2016 - Price: Print €165; PDF €132

Oil Information 2016

Oil Information is a comprehensive reference book on current developments in oil supply and demand. This publication contains key data on world production, trade, prices and consumption of major oil product groups, with time series back to the early 1970s.

Its core consists of a detailed and comprehensive picture of oil supply, demand, trade, production and consumption by end-user for each OECD country individually and for the OECD regions. Trade data are reported extensively by origin and destination.

Published August 2016 - Price: Print €165; PDF €132

Renewables Information 2016

Renewables Information provides a comprehensive review of historical and current market trends in OECD countries, including 2015 provisional data. It provides an overview of the development of renewables and waste in the world over the 1990 to 2014 period. A greater focus is given to the OECD countries with a review of electricity generation and capacity from renewable and waste energy sources, including detailed tables. However, an overview of developments in the world and OECD renewable and waste market is also presented. The publication encompasses energy indicators, generating capacity, electricity and heat production from renewable and waste sources, as well as production and consumption of renewables and waste.

Published August 2016 - Price: Print €110; PDF €88

CO₂ Emissions from Fuel Combustion 2016

In recognition of the fundamental importance of understanding energy related environmental issues, the IEA *CO₂ Emissions from Fuel Combustion* provides a full analysis of emissions stemming from energy use. This annual publication has become an essential tool for analysts and policy makers in many international fora such as the Conference of the Parties, which will be meeting in Marrakesh, Morocco, from 7 to 18 November 2016.

The data in this book are designed to assist in understanding the evolution of the emissions of CO₂ from 1971 to 2014 for 150 countries and regions by sector and by fuel. Emissions were calculated using IEA energy databases and the default methods and emission factors from the 2006 *IPCC Guidelines for National Greenhouse Gas Inventories*.

Published November 2016 - Price: Print €165; PDF €132

Two quarterlies

Oil, Gas, Coal and Electricity

This publication provides up-to-date, detailed quarterly statistics on oil, coal, natural gas and electricity for OECD countries. Oil statistics cover production, trade, refinery intake and output, stock changes and consumption for crude oil, NGL and nine selected oil product groups. Statistics for electricity, natural gas and coal show supply and trade. Import and export data are reported by origin and destination. The gas trade data from 1st quarter 2011 onwards corresponds to physical flows (entries/exits). Moreover, oil as well as hard coal and brown coal production are reported on a worldwide basis.

*Published Quarterly - Price: single edition Print €120;
annual subscription Print € 380;
single edition PDF €96;
annual subscription PDF € 304*

Energy Prices and Taxes

This publication responds to the needs of the energy industry and OECD governments for up-to-date information on prices and taxes in national and international energy markets. It contains crude oil import prices by crude stream, industry prices and consumer prices. The end-user prices for OECD member countries cover main petroleum products, gas, coal and electricity. Every issue includes full notes on sources and methods and a description of price mechanisms in each country. Time series availability varies with each data series.

*Published Quarterly - Price: single edition Print €120;
annual subscription Print € 380;
single edition PDF €96;
annual subscription PDF € 304*

Electronic editions

CD-ROMs and Online Data Services

To complement its publications, the Energy Data Centre produces CD-ROMs containing the complete databases which are used for preparing the statistics publications. State-of-the-art software allows you to access and manipulate all these data in a very user-friendly manner and includes graphic facilities. These databases are also available on the internet from our online data service.

■ Annual CD-ROMS / Online Databases

- World Energy Statistics 2016 Price: €800
- World Energy Balances 2016 Price: €800
- **World Energy Statistics and Balances 2016** Price: €1 400
(Combined subscription of the above two series)
- Electricity Information 2016 Price: €550
- Coal Information 2016 Price: €550
- Natural Gas Information 2016 Price: €550
- Oil Information 2016 Price: €550
- Renewables Information 2016 Price: €400
- CO₂ Emissions from Fuel Combustion 2016 Price: €550

■ Quarterly CD-ROMs / Online Databases

- Energy Prices and Taxes Price: (four quarters) €900

A description of these services is available on our website:

<http://data.iea.org>

All the annual and quarterly online databases are also accessible over the internet on a pay-per-view basis. The databases can be accessed either for a single data point or for time series.

Other online services

The Monthly Oil Data Service

The IEA *Monthly Oil Data Service* provides the detailed databases of historical and projected information which is used in preparing the IEA monthly *Oil Market Report (OMR)*. The IEA *Monthly Oil Data Service* comprises three packages available separately or combined as a subscriber service on the Internet. The data are available at the same time as the official release of the *Oil Market Report*.

The packages include:

- | | |
|---------------------------------------|----------------------|
| • Supply, Demand, Balances and Stocks | Price: €6 150 |
| • Trade | Price: €2 050 |
| • Field-by-Field Supply | Price: €3 150 |
| • Complete Service | Price: €9 200 |

A description of this service is available on our website:

www.iea.org/statistics/mods

The Monthly Gas Data Service

The *Monthly Gas Data Service* provides monthly natural gas data for OECD countries:

- Supply balances in terajoules and cubic metres;
- Production, trade, stock changes and levels where available, gross inland deliveries, own use and losses;
- Highly detailed trade data with about 50 import origins and export destinations;
- LNG trade detail available from January 2002;
- From 2011 onwards, transit volumes are included and trade data corresponds to entries/exits.

The databases cover the time period January 1984 to current month with a time lag of two months for the most recent data.

- Monthly Gas Data Service: Natural Gas Balances & Trade
Historical plus 12 monthly updates Price: €800

A description of this service is available on our website:

www.iea.org/statistics/mgds

The IEA statistics website contains a wealth of free statistics covering oil, natural gas, coal, electricity, renewables, energy-related CO₂ emissions and more for over 140 countries and historic data for the last 20 years. It also contains Sankey flows to enable users to explore visually how a country's energy balance shifts over up to 40 years, starting with production and continuing through transformation to see important changes in supply mix or share of consumption. The website also includes a range of monthly data.

The IEA statistics site can be accessed at:

www.iea.org/statistics/

***Note:** The prices quoted for Electronic Editions are for single-user licences. Please contact us for information on multi-user licence prices.*

Oil Market Report

Each month, *the* primary source of data on supply, demand, stocks, prices and refining

Since its appearance in 1983, the International Energy Agency's *Oil Market Report (OMR)* has become *the* definitive source of information on world oil market fundamentals, covering supply, demand, OECD stocks, prices and refining as well as OECD and selected non-OECD trade.

The *OMR* provides the most extensive, up-to-date statistical data available on current world oil market trends. It is the first and exclusive source to present official government statistics from all OECD countries, as well as selected data from non-OECD countries.

The main market movements of the month are highlighted in a convenient summary, while detailed analysis explains recent market developments and provides an insight into the months ahead. It is the *only* regular short-term analysis of the oil industry available based on information obtained from the extensive IEA network of contacts with government and industry.

The *OMR* provides both historical data and supply/demand forecasts for the year ahead. Featuring tables, graphs and statistics, it provides all the data and analysis necessary to track the oil market and to identify trends in production, consumption, refining, inventories in OECD countries and prices for both crude and products.

Additionally, subscribers to the *OMR* receive a copy of the annual *Medium-Term Oil Market Report (MTOMR)* which examines key industry themes. These include the impact of the global economic slowdown on oil demand, upstream and downstream investment levels, the likely pace of development of biofuels and non-conventional oil supplies, likely oil products availability and oil price formation. The *MTOMR* provides detailed supply and demand forecasts for crude oil and oil products looking five years forward, and since its inception in 2006 the report has become a standard industry reference.

To subscribe electronically, please see our website at
www.oilmarketreport.org

Annual subscription rate for single electronic copy: €2 200

World Energy Outlook 2016

The successful outcome of COP21 has raised hopes and expectations of concerted global efforts to tackle climate change, but how will this affect the efficiency and carbon footprint of the energy sector? When and how will market dynamics change for oil, natural gas and coal – or might lower prices for some fuels be here to stay? How can governments address the impact of local pollution, often energy-related, on air quality?

The *World Energy Outlook 2016 (WEO-2016)* series – including a special report in June and the full Outlook in November – will seek to shed light on these questions and more, all with the customary mix of rigorous quantitative modelling and insightful analysis. The *WEO-2016* series will include a particular focus on the following topical issues:

- **The impact of COP21:** *WEO-2016* will track progress with the implementation of the different country climate pledges made in Paris and judge what they mean for long-term energy trends. Based on this assessment, it will examine and present policy options to bridge the gap and reach climate objectives in full.
- **Major focus on renewables:** renewable energy is vital to steer the energy system to the lowcarbon future envisioned in the Paris agreement. This analysis will assess the rapid improvement in the competitiveness and economics of renewables, relative to fossil-fuels and other low carbon options, as well as the opportunities and questions that a rising share of renewable energy open up for the energy system as a whole.
- **The road ahead for fossil fuels:** coal, oil and natural gas remain the bedrock of global energy use but all face an uncertain period of adjustment, both to today's market conditions and – over the longer term – to the prospect of a new policy landscape post-COP21. With lower prices bringing down the axe on many new projects, *WEO-2016* will assess the impact on tomorrow's market balances and the different pathways and risks that lie further ahead.
- **Mexico's energy outlook:** the comprehensive energy reform package passed in Mexico will have profound effects on the country's energy sector development. This analysis will evaluate the potential impact of the reforms for Mexico's upstream as well as its power sector and wider economy.
- **Energy and water:** are interdependent. This analysis will assess current and future freshwater requirements for energy production and the amount of energy required for the water sector, highlighting potential vulnerabilities and key stress points.
- **Special Report on Energy and Air Pollution** (Released in June 2016): Energy-related air pollution leads to millions of premature deaths and costs the global economy trillions of dollars each year; with growing demand for energy services in the future, the already high costs of air pollution risk increasing dramatically. This special report, the first of its kind, will provide new analysis to help decision-makers tackle an issue of pressing social and political concern.
