# Foreword

This annual publication provides information on tax levels and tax structures in OECD countries. It was prepared under the auspices of the Working Party on Tax Policy Analysis and Tax Statistics of the Committee on Fiscal Affairs and is published under the responsibility of the Secretary-General of the OECD.

# Acknowledgements

*Revenue Statistics 2019* has been produced by the Organisation for Economic Cooperation and Development (OECD)'s Centre for Tax Policy and Administration (CTPA) under the auspices of Working Party No.2 on Tax Policy Analysis and Tax Statistics (WP2) of the Committee on Fiscal Affairs. The authors of this edition were Michelle Harding, Nicolás Miranda and Michael Sharratt. The special feature was written by Miguel Cárdenas Rodríguez and Ivan Hašič in the Environment Directorate and by Michelle Harding.

The authors would like to thank colleagues in the OECD for their invaluable comments and practical support in finalising the publication, including David Bradbury, Karena Garnier, Natalie Lagorce, and Violet Sochay in CTPA; Frederic Parrot and Bettina Wistrom in the Statistics and Data Directorate and the Statistical Editors and Content Management Team in the Press and Communications Directorate. Marie-Aurélié Elkurd at CTPA assisted with the production and publication of this report and Stephanie Coic in the Development Cooperation Directorate (DCD) designed the cover. The authors would also like to thank WP2 delegates and their colleagues working in national administrations for their input and comments.

# Executive Summary

In 2018, the average OECD tax-to-GDP ratio remained virtually unchanged compared to 2017, with almost no increase (a change of 0.02 percentage points). This ends the trend of annual increases in the OECD average tax-to-GDP ratio observed since 2009, following the financial crisis. The slowing in the growth of the OECD average was predominantly driven by the impact of the significant fall in the tax-to-GDP ratio of the United States as a result of their tax reforms. However, due to rounding the OECD average tax-to-GDP ratio was 34.3% in 2018 compared to 34.2% in 2017.

In this publication, taxes are defined as compulsory, unrequited payments to general government. They are unrequited in that the benefits provided by governments to taxpayers are not normally allocated in proportion to their payments. Taxes are classified by their base: income, profits and capital gains; payroll; property; goods and services; and other taxes. Compulsory social security contributions (SSCs) paid to general government are also treated as taxes. Revenues are analysed by level of government: federal or central; state; local; and social security funds. Detailed information on the classifications applied is set out in the Interpretative Guide in Annex A.

## Tax levels in 2018

Across OECD countries, tax-to-GDP ratios in 2018 ranged from 16.1% in Mexico to 46.1% in France. Half of the OECD countries had tax-to-GDP ratios between 32% and 40% of GDP in 2018, with one-quarter of countries having ratios above this level and one-quarter below. Between 2017 and 2018, the OECD average tax-to-GDP ratio remained virtually unchanged (a change of 0.02 percentage points), although due to rounding the headline figures increased from 34.2% (34.24%) to 34.3% (34.26%).

An increase in tax-to-GDP ratios from 2017 to 2018 is observed in 19 of the 34 countries for which preliminary 2018 data is available. In all of these countries, the increase was due to nominal tax revenues increasing more than the nominal increase in GDP. The increase in the tax-to-GDP ratio was largest in Korea and Luxembourg (1.5 and 1.3 percentage points, respectively) due to higher corporate income taxes in both countries as well as higher revenues from personal income taxes in Luxembourg. There were no other increases above one percentage point.

Fifteen countries experienced a decrease in tax-to-GDP ratios in 2018 relative to 2017. The largest fall was seen in the United States (2.5 percentage points), following the reforms to corporate and personal income taxes and the one-off repatriation tax on foreign earnings implemented in the Tax Cuts and Jobs Act. Falls of over one percentage points were also observed in Hungary and Israel (1.6 and 1.4 percentage points, respectively). Smaller decreases were seen in Denmark, Finland, France, Greece, Iceland, Ireland, Italy, Latvia, the Slovak Republic, Sweden, Switzerland and Turkey. In most countries the decreases were due to nominal tax revenues increasing by less than the increase in GDP, except in the United States and Israel, where nominal tax revenues fell relative to 2017, but nominal GDP rose.

Across the last decade, 26 OECD countries reported higher tax-to-GDP ratios in 2018 than in 2008, with the greatest increases in Greece and the Slovak Republic. Among the remaining 10 countries, tax levels

in 2018 remained more than six percentage points lower in Ireland and more than two percentage points lower in Hungary and Norway.

## Tax structure in 2017

In 2017, the latest year in which final data is available for all countries, social security contributions (SSCs) amounted to the largest share of tax revenues in the OECD, at just over one-quarter (26.0%) of total revenues, and together with personal income taxes (23.9%) the two categories amounted to nearly one-half of tax revenues in OECD countries, on average. Value Added Tax (VAT) accounted for a further one-fifth of total revenues (20.2%). Other consumption taxes and taxes on corporate income accounted for smaller shares of tax revenues (12.2% and 9.3% respectively), with property taxes (5.8%) and residual taxes accounting for the remaining share.

Since 2016, the share of income taxes to total revenue has increased by 0.7 percentage points. This was relatively evenly split between personal and corporate income taxes (0.4 and 0.3 percentage points, respectively). This continues the recent increase in the share of corporate tax revenues, from 8.8% of total tax revenues in 2014 and 2015, to 9.0% in 2016 and 9.3% in 2017. Since 2016, the share of revenues from taxes on goods and services decreased slightly, with an increase in VAT revenues of 0.2 percentage points outweighed by a fall in the share of revenues from other goods and services taxes (0.3 percentage points). The largest fall between 2016 and 2017 was seen in property tax revenues (0.7 percentage points) although this reflects the impact of the one-off stability contributions in Iceland, which had increased their share in 2016.

## Changes by level of government

Tax revenues at different levels of government remained stable in 2017 relative to 2016, both on an OECD average basis and in individual countries. The central share of revenues in 2017 remained at 53.8% of general government revenue in federal countries and at 63.8% in unitary countries. In federal countries, 25.1% of revenues were received at subnational level on average (ranging from 4.6% in Austria to 50.2% in Canada), with roughly two-thirds of revenues being received by state governments and one-third by local governments. In unitary countries, the share of local government revenues was 11.2% on average, ranging from less than 0.9% in Estonia to 35.3% in Sweden.

## Environmentally related tax revenues in OECD countries

A special feature in this report details a reconciliation of data on environmentally related taxes in Revenue Statistics with data in the OECD Policy Instruments for the Environment (PINE) database and in Eurostat's National Tax Lists. Reconciling these sources ensures coherence and comparability of the data and thus improves the quality of data available for policy analysis.

The special feature finds that environmentally related tax revenues (ERTRs) in OECD countries in 2017 ranged from 2.8% of total tax revenues in the United States to 12.5% in Slovenia and Turkey, accounting for 6.9% on a simple average basis. Environmentally related tax revenues accounted for 2.3% of GDP, on average, with country shares ranging from 0.7% of GDP in the United States to 4.5% in Slovenia. Since 1995, OECD countries have not moved toward sourcing a greater share of tax revenues from environmentally related tax bases. Across the OECD, the largest share of ETRTs in 2017 was derived from energy taxes, both on average and in nearly every OECD country.

# Introduction

The purpose of this annual publication is to provide internationally comparative data on tax levels and tax structures in member countries of the OECD. The taxes imposed in each country are presented in a standardised framework based upon the OECD classification of taxes and its Interpretative Guide as contained in Annex A to this Report.

The data for the Report has, for the most part, been provided by Delegates to Working Party No.2 on Tax Policy Analysis and Tax Statistics of the Committee on Fiscal Affairs. The OECD acknowledges the co-operation of the International Monetary Fund, whose classification of tax revenues — although in a number of respects less detailed — is in many respects similar to that of the OECD.<sup>1</sup> The most important of the other classifications currently in use is the System of National Accounts (henceforth referred to as SNA) and the European System of Integrated Economic Accounts of EU member states (henceforth referred to as ESA), which is primarily an elaboration of SNA, though differing from it in certain respects. Subject to a few exceptions, SNA/ESA figures can be reconciled with the figures in the present Report, since SNA criteria and definitions have been adopted unless the contrary is specifically indicated.

The material is organised in six chapters. Chapter 1 summarises tax trends of the past 50 years focusing in turn on tax-to-GDP ratios (section 1.1), tax structures (section 1.2) and taxes by level of government (section 1.3). Section 1.4 discusses the impact of alternate treatments of non-wastable tax credits. This year's issue also carries in Chapter 2 a special feature on "Identifying environmentally related tax revenues in Revenue Statistics". Chapter 3 contains a set of comparative statistical tables for years 1965-2018. Chapter 4 provides country tables with tax revenue and tax-to-GDP ratios broken down by selected tax categories and by level of government for years between 1990 and 2017 (section 4.1).<sup>2</sup> Two memorandum tables show how countries finance their social benefits, and report taxes and social security contributions paid by general government (section 4.2). Chapter 5, which is available on line only provides statistical tables with a detailed breakdown of tax revenues by country for years between 1965 and 2017 (section 5.1). Two memorandum tables show how countries finance their social benefits, and report taxes and social security contributions paid by general government (section 5.2). Chapter 6, which is also only available on line, attributes tax revenues to general government by the following sub-sectors: central, state; local and social security funds. It contains a set of comparative statistical tables for years 1975-2017 (section 6.1) and a second series of tables with a detailed breakdown of tax revenues by country for years between 1975 and 2017 (section 6.2).

## Notes

<sup>1</sup> See IMF, *Government Finance Statistics Manual 2014* (Washington D.C.: International Monetary Fund, 2014).

<sup>2</sup> Because of space limitations, data are shown for selected years between 1965 and 2017. Data for years not shown are available online.

# **1** Tax revenue trends 1965-2018

---

Chapter 1 provides information on trends in tax revenues in OECD countries from 1965 to 2018, including changes in tax-to-GDP ratios, tax structures, taxes by level of government and non-wastable tax credits.

---

*Revenue Statistics 2019* presents detailed internationally comparable data on tax revenues of OECD countries for all levels of government. The latest edition provides final data on tax revenues in 1965-2017. In addition, provisional estimates of tax revenues in 2018 are included for almost all OECD countries.<sup>1</sup>

### Box 1.1. Revenue Statistics in OECD Countries – definitions & classifications

In *Revenue Statistics 2019*, taxes are defined as compulsory, unrequited payments to general government. Taxes are unrequited in the sense that benefits provided by government are not normally in proportion to their payments.

In the OECD classification, taxes are classified by the base of the tax:

- Income and profits (heading 1000)
- Compulsory social security contributions paid to general government, which are treated as taxes (heading 2000)
- Payroll and workforce (heading 3000)
- Property (heading 4000)
- Goods and services (heading 5000)
- Other (heading 6000)

Much greater detail on the tax concept, the classification of taxes and the accrual basis of reporting is set out in the OECD Interpretative Guide at annex A of *Revenue Statistics 2019*.

All of the averages presented in this summary are unweighted.

## Tax-to-GDP ratios

### ***Tax ratios for 2018 (provisional data)***

New OECD data in the annual *Revenue Statistics 2019* publication show that on average, tax revenues as a percentage of GDP (i.e. the tax-to-GDP ratio) were virtually unchanged in 2018, with a very slight increase of just under 0.02 p.p. of GDP relative to 2017. This ends the trend of annual increases observed in the OECD average since the financial crisis in 2009, excluding 2016, which was a special case due to the one-off stability contributions in Iceland in that year.<sup>2</sup> The small change in 2018 was largely due to the fall of 2.5 percentage points in the tax-to-GDP ratio of one country (the United States, following the reforms described below) (Figure 1.1). However, due to rounding, the OECD average tax-to-GDP ratio was 34.3% in 2018, compared to 34.2% in 2017 (34.24 % and 34.26%, respectively).

Figure 1.1. Trends in tax-to-GDP ratios, 1965-2018p (as % of GDP)

Notes: Data for 2018 are preliminary. The OECD average in 2018 is calculated by applying the unweighted average percentage change for 2018 in the 34 countries providing data for that year to the overall average tax to GDP ratio in 2017.

The 2016 OECD average tax-to-GDP ratio includes the one-off revenues from stability contributions in Iceland. Without these revenues included, the OECD average tax-to-GDP ratio in 2016 would have been 34.0.

1. 2018 provisional average calculated by applying the unweighted average percentage change for 2018 in the 34 countries providing data for that year to the overall average tax to GDP ratio in 2017. The 2016 OECD average tax-to-GDP ratio includes the one-off revenues from stability contributions in Iceland.

2. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes.

3. From 1991 the figures relate to the united Germany.

4. The data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

5. 2018 provisional: Secretariat estimate, including expected revenues collected by state and local governments.

6. Corporate income tax revenues for the United Kingdom are based on data provided in July; this was prior to revisions made to the historic Corporation tax data in September, so the revisions are not reflected here. For the latest UK Corporation tax data, please see [www.gov.uk/government/statistics/corporation-tax-statistics-2019](http://www.gov.uk/government/statistics/corporation-tax-statistics-2019) the main revisions are explained on page 13 of [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/833371/Aug19\\_Receipts\\_NS\\_Bulletin\\_Final.odt](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/833371/Aug19_Receipts_NS_Bulletin_Final.odt).

7. Calculated as 5000 Taxes on goods and services less 5111 Value added taxes.

8. Includes 1300 Unallocable between personal and corporate income tax, 3000 Taxes on payroll and workforce and 6000 Other taxes.

StatLink  <http://dx.doi.org/10.1787/888934054645>

Country tax-to-GDP ratios in 2018 varied considerably (Table 1.1), both across countries and since 2017. Key observations include:

- France had the highest tax-to-GDP ratio in 2018 (46.1%). Denmark, which had the highest tax-to-GDP ratio of OECD countries from 2002 to 2016, had the second-highest tax-to-GDP ratio in 2018 (44.9%). Mexico had the lowest tax-to-GDP ratio (16.1%).
- Of the 34 countries for which data for 2018 are available, the ratio of tax revenues to GDP compared to 2017 rose in 19 and fell in 15.
- Between 2017 and 2018, the largest tax ratio increases were in Korea and Luxembourg at 1.5 p.p. and 1.3 p.p. respectively. In Korea, the rise was due to increases in income taxes (1.1 percentage points, predominantly from corporate tax revenues following the increase in the corporate tax rate from 24.2% in 2017 to 27.5% in 2018), as well as small increases in SSCs and property taxes. In Luxembourg, the increase was predominantly due to higher revenues from income taxes (1.0 percentage points, split between personal and corporate income taxes) and smaller increases in property taxes and VAT. There were no other countries with increases of more than 1 percentage points. (Figure 1.2).
- The largest fall in the tax-to-GDP ratio between 2017 and 2018 was in the United States (2.5 p.p.). The decrease in the United States were due to the tax reforms implemented in the Tax Cuts and Jobs Act, which lowered the corporate tax rate from 38.9% in 2017 to 25.8% in 2018 and also reduced the tax wedge on labour income via reductions to income tax rates and increases in the standard deduction and the child tax credit. These changes lead to a 1.1 percentage point decrease in income taxation (0.5 pp in personal income tax revenues and 0.7 percentage points in corporate income tax revenues). In addition, there was a decrease in property tax revenues of 1.3 percentage points, due to the one-off deemed repatriation tax on foreign earnings under the Tax Cuts and Jobs Act, which increased property tax revenues in 2017.<sup>3</sup>
- Decreases of over 1 percentage points were also seen in Hungary (1.6 p.p.) and Israel (1.4 p.p.). The decrease in Hungary was due to a reduction in revenues from corporate income taxes (0.9 percentage points) as well as slight reductions in personal income taxes, social security contributions and VAT. There were no other countries with a decrease of over one percentage point.

Over a longer timeframe, the OECD average tax-to-GDP ratio was higher in 2018 than in 2008, when it was 32.9% of GDP on average. Across countries, the tax-to-GDP ratio was higher in 2018 than in 2008 in 26 countries. The largest increase was seen in Greece (6.9 percentage points) and increases of over 3 percentage points were also seen in Korea, Luxembourg, Portugal, Mexico, France and the Slovak Republic). Decreases since 2008 were seen in the remaining 10 countries. The largest fall has been in Ireland, from 28.5% in 2008 to 22.3% of GDP in 2018, largely due to the exceptional increase in GDP in 2015. Larger decreases were also seen in Hungary (2.9 percentage points), Norway (2.3) and the United States (1.4) (Figure 1.2).

Figure 1.2. Changes in tax-to-GDP ratios, p.p., 2017-18p and 2008-18p

Note: Preliminary data for 2018 was not available for Australia and Japan. For these countries the comparison shown is 2016-2017 and 2008-2017 data.

Source: Secretariat calculations based on Table 3.1.

StatLink  <http://dx.doi.org/10.1787/888934054493>

Changes in the tax-to-GDP ratio are driven by the relative changes in nominal tax revenues and in nominal GDP. From one year to the next, if tax revenues rise more than GDP (or fall less than GDP) the tax-to-GDP ratio will increase. Conversely, if tax revenues rise less than GDP, or fall further, the tax-to-GDP ratio will go down. Therefore, the tax-to-GDP ratio does not necessarily mean that the amount of tax revenues have increased in nominal, or even real, terms.

In 2018, 19 OECD countries had an increase in their tax-to-GDP ratio relative to 2017. In all of these countries, GDP growth was positive, although to a lesser degree than tax revenue growth. Of the 15 OECD countries that experienced a decline in their tax-to-GDP ratio in 2018, thirteen had higher levels of tax revenues in nominal terms than the preceding year, but the increase in nominal tax revenues was less than the increase in nominal GDP levels. Two countries (the United States and Israel) had positive nominal GDP growth and negative tax revenue growth; no countries experienced declines in nominal GDP (Figure 1.3). In Figure 1.3, changes between 2016 and 2017 are shown for Australia and Japan, where the tax-to-GDP ratio is not available in 2018. In both countries, nominal tax revenues grew faster than GDP, leading to increases in the tax-to-GDP ratio.

### Box 1.2. Methodology: the tax-to-GDP ratio

The tax-to-GDP ratios shown in *Revenue Statistics 2018* express aggregate tax revenues as a percentage of GDP. The value of this ratio depends on its denominator (GDP) as well as its numerator (tax revenue), and that the denominator – GDP – is subject to historical revision.

#### The numerator (tax revenue)

- For the numerator, the OECD Secretariat uses revenue figures that are submitted annually by correspondents from national Ministries of Finance, Tax Administrations or National Statistics Offices. Although provisional figures for most countries become available with a lag of about six months, finalised data become available with a lag of around one and a half years. Final revenue data for 2017 were received during the period May-August 2019.
- In thirty-three OECD countries the reporting year coincides with the calendar year. Three countries — Australia, Japan and New Zealand — have different reporting years. Reporting year 2017 includes Q2/2017–Q1/2018 (Japan) and Q3/2017–Q2/2018 (Australia, New Zealand) respectively (Q = quarter).

#### The denominator (GDP)

- For the denominator, the GDP figures used for *Revenue Statistics 2019* are the most recently available in September 2019. By that time, the 2017 and 2018 GDP figures were available for all OECD countries.
- Using these GDP figures ensures a maximum of consistency and international comparability for the reported tax-to-GDP ratios.
- The GDP figures are based on the OECD Annual National Accounts (ANA – SNA) for the thirty-two OECD countries where the reporting year is the actual calendar year.

Where the reporting year differs from the calendar year, the annual GDP estimates are obtained by aggregating quarterly GDP estimates provided by the OECD Statistics Directorate for those quarters corresponding to each country's fiscal (tax) year.

Figure 1.3. Relative changes in nominal tax revenues and nominal GDP (%), 2017-18p

Note: Data for Australia and Japan show the change between 2016 and 2017, as preliminary data for 2018 was not available for Australia and Japan. Data for Mexico in 2018 show a Secretariat estimate, including expected revenues collected by state and local governments. Source: Secretariat calculations based on chapter 4 (tax revenues) and table 3.19 (GDP).

### Tax-to-GDP ratios for 2017 (final data)

The latest year for which tax-to-GDP ratios are based on final revenue data and available for all OECD countries is 2017 (Figure 1.4). These data show that tax ratios vary considerably across countries:

- In 2017, France had the highest tax-to-GDP ratio (46.1%), followed by Denmark (45.7%). Five other countries also had tax-to-GDP ratios above 40% (Belgium, Sweden, Finland, Italy and Austria).
- Mexico had the lowest ratio at 16.1% followed by Chile (20.1%), Ireland (22.5%) and Turkey (24.9%). No other countries had a tax-to-GDP ratio of less than 25% in 2017, but five other countries had ratios below 30% (United States, Korea, Switzerland, Australia and Lithuania)
- The tax-to-GDP ratio in the OECD area as a whole (un-weighted average) was 34.2% in 2017. In 2016, it was 34.4% when the impact of the one-off stability contributions in Iceland is included, or 34.0% if calculated without including these one-off contributions.<sup>4</sup>
- Relative to 2016, overall tax ratios rose in 22 OECD member countries and fell in 14.
- The largest increases in the tax-to-GDP ratio were in Israel (1.4 percentage points) and in Australia and the United States (0.9).
- The largest reductions were in Iceland (13.3 percentage points, due to the one-off stability contributions received in 2016), Hungary (1.0) and in Estonia and Ireland (0.8).

Between 2016 and 2017, the key changes in the tax-to-GDP ratio were largely driven by increases in revenues from income taxes (0.2 percentage points, evenly split between personal and corporate income taxes). Revenues from social security contributions, taxes on property and taxes on goods and services

were unchanged, although within taxes on goods and services, the share of VAT increased slightly and the share of specific goods and services decreased slightly. Revenues from taxes on property decreased by 0.4 percentage points between 2016 and 2017, almost entirely due to the one-off stability contributions in Iceland in 2016.

### **Tax ratio changes between 1965 and 2017**

Between 1965 and 2017, the average tax-to-GDP ratio in the OECD area increased from 24.9% to 34.2% (an increase of 9.4 percentage points, with the difference due to rounding) (Figure 1.1).

Before the first oil shock (1973 to 1974), strong, almost uninterrupted income growth enabled tax levels to rise in all OECD countries. In part, tax levels rose automatically through the effect of fiscal drag on personal income tax schedules. From 1975 to 1985, the tax burden in the OECD area increased by 2.9 percentage points. After the mid-1970s, the combination of slower real income growth and higher levels of unemployment apparently limited the revenue raising capacity of governments. But during and after the deep recession following the second oil shock (1980), countries in Europe saw tax levels rise further, to finance higher spending on social security and rein in budget deficits.

After the mid-1980s, most OECD countries substantially reduced the statutory rates of their personal and corporate income tax, but the negative revenue impact of widespread tax reforms was often offset by reducing or abolishing tax reliefs. By 1999, the average OECD tax-to-GDP ratio had risen to 33.8%, the highest recorded level at that time. It fell back slightly between 2001 and 2004, but then rose again between

2005 and 2007 before falling back following the crisis. Taking these changes together the average tax level in the OECD area increased by 1.2 percentage points between 1995 and 2017 (Figure 1.1).

The OECD average conceals the great variety in national tax-to-GDP ratios. In 1965, tax-to-GDP ratios in OECD countries ranged from 10.6% in Turkey to 33.7% in France. By 2017 the corresponding range was from 16.1% in Mexico to 46.1% in France. The trend towards higher tax levels over this period reflects the need to finance a significant increase of public sector outlays in almost all OECD countries.

## Tax structures

Tax structures are measured by the share of major taxes in total tax revenue. In 2017, the tax structures of OECD countries varied. Eighteen countries raised the largest part of their revenues from income taxes (both corporate and personal), eleven countries raised the largest part of their revenues from SSCs, and seven countries raised the largest part of their revenues from consumption taxes (including VAT). Taxes on property and payroll taxes played a smaller role in the revenue systems of OECD countries in 2017, both on average and within most countries (Figure 1.5).

**Figure 1.5. Tax structures in 2017 (as % of total tax revenue)**

Note: Countries are grouped and ranked by those where income tax revenues (personal and corporate) form the highest share of total tax revenues, followed by those where social security contributions, or taxes on goods and services, form the highest share.

Source: Secretariat calculations based on data in chapter 4.

StatLink  <http://dx.doi.org/10.1787/888934054550>

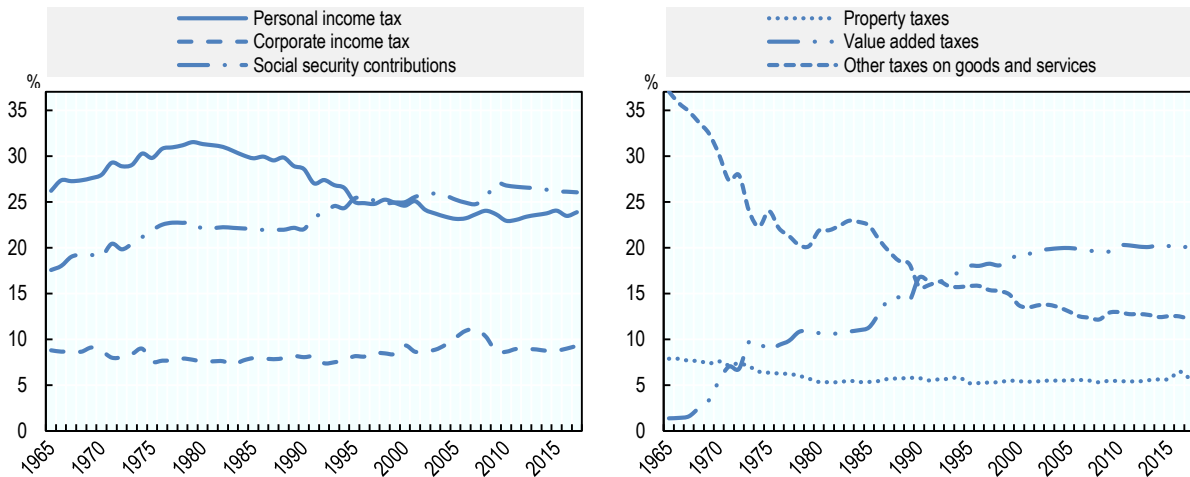

While on average tax levels have generally been rising, the tax structure or tax ‘mix’ has been remarkably stable over time. Nevertheless, several trends have emerged up to 2017 – the latest year for which data is available for all 36 OECD countries. These trends are discussed further below.

### **Taxes on income and profits**

On average, in 2017, OECD countries collected 34.0% of their tax revenues through taxes on income and profits (personal and corporate income taxes taken together). Taxes on personal and corporate incomes remain the most important source of revenues used to finance public spending in 18 OECD countries, and

in nine of them – Australia, Canada, Denmark, Iceland, Ireland, Mexico, New Zealand, Switzerland and the United States – the share of income taxes in the tax mix in 2017 exceeded 40%.

**Figure 1.6. Trends in tax structures (1965-2017, as % of total tax revenue)**

Note: The OECD average tax revenue in 2016 from main categories includes the one-off revenues from stability contributions in Iceland. This predominately affects the average revenues from property taxes, as a percentage of total tax revenues, in that year only.

Source: Secretariat calculations based on tables 3.8 to 3.14.

StatLink  <http://dx.doi.org/10.1787/888934054569>

Within taxes on income and profits, the share of PIT and CIT varies:

- Revenues from personal income taxes are 23.9% of total taxes on average in 2017 compared with around 30% in the 1980s. About two percentage points of this reduction can be attributed to the impact on the average of a number of relatively new entrants to the OECD from Eastern Europe for which tax revenue data is only available from the 1990s onwards. These countries tend to have relatively low personal income tax revenues and high revenues from social security contributions, but this impact is observed in the post 1990 data only.
- The variation in the share of the personal income tax between countries is considerable. In 2017, it ranged from a low of 9.7% in Chile to 40.3% in Australia and 52.9% in Denmark (Figure 1.5).
- Corporate income tax revenues represented between 7% and 9% of total tax revenues, on average, throughout the period 1965 to 2003. They then increased to a high of 11.1% in 2007, before dropping to 8.6% in 2010, directly after the financial crisis. They remained at between 8.6 and 9.0% of total revenues until 2017, when they increased to 9.3% of total tax revenues, on average.
- The share of the corporate income tax in total tax revenues varied considerably across countries from less than 5% (Estonia, Italy and Slovenia) to 21.8% (Mexico) and 21.1% (Chile) in 2017. Apart from the spread in statutory rates of the corporate income tax, these differences are at least partly explained by institutional and country specific factors, for example:
  - the degree to which firms in a country are incorporated,
  - the breadth of the corporate income tax base, for example some narrowing may occur as a consequence of generous depreciation schemes and of tax incentives,

- the degree of cyclicity of the corporate tax system, for which one of the important elements are loss offset provisions,
- the extent of reliance upon tax revenues from the exploitation of oil and/or mineral deposits, and
- other instruments to postpone the taxation of earned profits.

### Social security contributions

Social security contributions as a share of total tax revenues on average across the OECD accounted for 26.0% in 2017. They were highest in the Slovak Republic and the Czech Republic (43.9% and 43.0%, respectively). In contrast, Australia and New Zealand do not levy social security contributions.

There is also wide variation across OECD countries in the relative proportions of social security contributions paid by employees and employers (Figure 1.7):

- Seven countries (Chile, Denmark, Greece, Hungary, Israel, Luxembourg, the Netherlands, Poland, and Slovenia) raise more revenues from employee SSCs, whereas the remainder raise more from employer SSCs.
- The highest share of employee SSC revenues are found in Slovenia, at 20.8% of total revenues. Germany, Greece, Hungary, Japan and Poland also have employee SSC revenues of over 15% of total tax revenues. Denmark had the lowest share, at 0.1% of total revenues. Apart from Denmark, only Estonia had revenues from employee SSCs of less than 5% of total revenues.
- The highest share of employer social security contribution revenues are found in Estonia, at 32.4% of total revenues. Lithuania (28.2%), the Czech Republic (27.5%) and the Slovak Republic (25.6%) also had employer SSC revenues of over 25% of total tax revenues. Denmark and Chile had the lowest shares, at 0.03% and 0.2% of total revenues respectively.
- The highest share of self-employed or non-employed social security contribution revenues are found in the Netherlands and the Slovak Republic, at 8.6% and 7.8% of total revenues respectively.

**Figure 1.7. Composition of social security contributions, as % of total social security contributions, 2017**

Note: Australia, Iceland, Mexico and New Zealand are not included within figure 1.7. Although Iceland and Mexico collect social security contributions, disaggregated data is not available. New Zealand and Australia do not levy social security contributions.

StatLink  <http://dx.doi.org/10.1787/888934054588>

## Property taxes

Between 1965 and 2017, the share of taxes on property fell from 7.9% to 5.8% of total tax revenues on average across the OECD (Figure 1.6). The United States had the highest share of property tax revenues in 2017 (16.0% of total revenues), although this was due to the one-off deemed repatriation tax which is recorded in 2017.<sup>5</sup> Australia, Canada, the United Kingdom and Korea also had property tax revenues that amounted to more than 10% of total tax revenues. By contrast, property taxes accounted for 0.7% of total revenues in Estonia, the lowest of OECD countries and were also less than 2% in six other countries (Austria, Czech Republic, Lithuania, Mexico, Slovenia and the Slovak Republic).

## Consumption taxes

- The share of taxes on consumption (general consumption taxes plus specific consumption taxes) fell from 38.4% to 32.4% between 1965 and 2017 (Figure 1.6).
- During this period, the composition of taxes on goods and services has fundamentally changed. A fast-growing revenue source has been general consumption taxes, especially the value-added tax (VAT) which is now imposed in thirty-five of the thirty-six OECD countries.<sup>6</sup>
- General consumption taxes presently account for 20.8% of total tax revenue, compared with only 11.5% in the mid-1960s. In 2017, the vast majority of this was from VAT (20.2% of total tax revenues) (Figure 1.6)
- The substantially increased importance of the value-added tax has served to counteract the diminishing share of specific consumption taxes, such as excises and custom duties.
- Between 1975 and 2017 the share of specific taxes on consumption (mostly on tobacco, alcoholic drinks and fuels, as well as some environment-related taxes) have almost halved from 17.7% to 9.6% of total revenues. In 2017, excises were the largest single category of total revenues, accounting for 7.6% of total revenues (Figure 1.8).
- Rates of taxes on imported goods were considerably reduced across all OECD countries, reflecting a global trend to remove trade barriers.
- Nevertheless, countries such as Estonia, Mexico, Poland, and Slovenia (around 13%) and Turkey (around 22%) still collect a relatively large proportion of their tax revenues through taxes on specific goods and services.

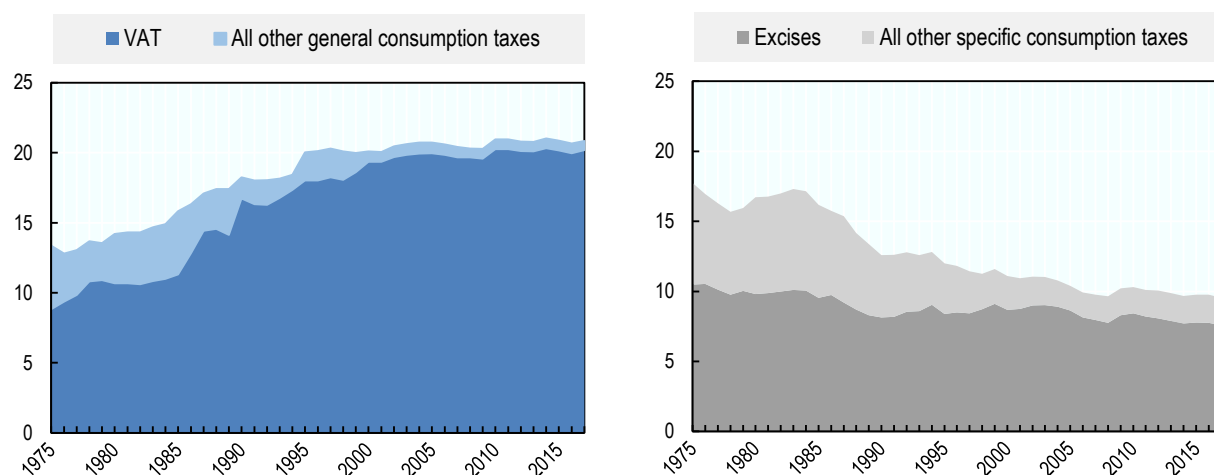

## Taxes by level of government

This section discusses the relative share of tax revenues attributed to the various sub-sectors of general government in 2017. The different sub-sectors are:

- Central government
- State government (federal and regional countries only)
- Local government
- Social security funds
- Supranational (EU countries only)

The guidelines for attributing these revenue shares to the different levels of government are based on the final version of the 2008 System of National Accounts. These guidelines are discussed in the special feature S.1 in the 2011 edition of OECD *Revenue Statistics*.

**Figure 1.8. Share of general consumption tax revenues (left panel) and specific consumption revenues (right panel) as % of total revenues, 1975-2017**

Note: The unweighted average for each year includes all countries which report revenue in the categories shown in that year. The OECD averages for 2016 include the one-off revenues from stability contributions in Iceland.

### **Revenues of sub-national governments**

Eight OECD countries have a federal structure. Among these countries, central governments received 53.8% of total revenues in 2017 on average. The second-highest share of revenues on average was received by social security funds, which are a sub-sector of general government, at 21.0% of total revenues, followed by 17.3% at the state level and 7.7% at the local level (Table 1.3). However, within countries there was considerable variation around these means:

- In 2017, the share of central government receipts in the eight federal OECD countries varied from 29.5% in Germany to 80.6% in Australia.
- In 2017, the share of the states varied from 1.6% in Austria, 4.1% in Mexico and 10.8% in Belgium to 39.8% in Canada. The share of local government varied from 1.6% in Mexico to 15.3% in Switzerland.
- Between 1975 and 2017 the share of federal government revenues declined by nearly fifteen percentage points in Belgium and to a lesser extent in Canada and Germany.
- The share of federal government revenues increased in Austria by around 15 and five percentage points respectively. There was little change in Australia and Mexico.
- Of the seven federal countries with social security funds, five increased the share of revenue between 1975 and 2017. The exceptions were Canada and Mexico, where the share slightly declined between 1975 (1980 for Mexico due to data availability) and 2017.

Spain is classified as a regional rather than a unitary country because of its highly decentralised political structure. In 2017 the share of central government receipts was 41.3% compared with 15.2% for the regional government. Between 1975 and 2017, the share of local government receipts increased from around 4% to 10% and the share of social security funds declined from 47.5% to 33.1%.

1. Spain is constitutionally a non-federal country but has a highly decentralised political structure.

2. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes.

StatLink  <http://dx.doi.org/10.1787/888934054683>

The remaining twenty-six OECD countries have a unitary structure. In these countries, an average of 63.8% of revenues were derived at the central level, with 24.6% accounted for by social security funds. A further 11.2% were raised by local governments. Among unitary OECD countries:

- The share of central government receipts in 2017 varied from 34.2% in France and 36.5% in Switzerland to 93.4% in New Zealand.
- The local government share varied from 0.9% in Estonia to 35.3% in Sweden.
- Between 1975 and 2017 there have been shifts to local government of 5 percentage points or more in five countries – France, Iceland, Italy, Korea, Portugal and Sweden and a smaller increase in the Netherlands. Shifts of 5 percentage points or more in the other direction occurred in three countries – Ireland, Norway and the United Kingdom.<sup>7</sup>
- Between 1975 and 2017, there were increases in the share of social security funds of 7 or more percentage points in four countries – Finland, France, Japan and Korea and corresponding decreases in four other countries – Italy, Norway, Portugal and Sweden.

StatLink  <http://dx.doi.org/10.1787/888934054702>

The twenty-three EU member states that are also members of the OECD collect taxes on behalf of the European Union (EU). These include customs duties (Table 1.5) and Single Resolution Fund contributions (Table 1.6). For years prior to 1998, customs duties collected on behalf of the EU by national tax administrations of the EU member states are included under heading 5123. From 1998 onwards they are shown as a memorandum item since they represent a tax imposed by the EU and collected by national administrations.

1. For euro area countries, the figures are in euros for all years.

StatLink  <http://dx.doi.org/10.1787/888934054721>

In addition, the Single Resolution Fund (SRF) has been in place since 2015 and countries in the Eurozone are required to make SRF contributions under the Single Resolution Mechanism (Regulation (EU) No 806/2014). Contributions are paid on an ex-ante basis and contributions are transferred from the national authorities to the SRF. So far, contributions have been collected for the years 2015 to 2018. These contributions are included in *Revenue Statistics*, typically under category 5126, and their amounts are summarised in Table 1.6.

**Table 1.6. Single resolution fund contributions collected on behalf of the European Union**

Millions of national currency

	2015	2016	2017	2018
Austria	198	204	188	199
Belgium	235	278	250	285
Estonia	..	5	5	5
Finland	76	112	122	55
France	910	1565	1910	2277
Germany	1578	1760	1710	1986
Greece	..	98	89	..
Ireland <sup>1</sup>	..	175	98	107

### **Composition of central and sub central revenues**

Figure 1.9 shows the revenues from each major category of tax revenue for central and sub central governments. For federal and regional countries, the sub central level includes revenues received by both state and local governments. Figure 1.9 demonstrates that:

- Central government revenues in almost all OECD countries are predominantly derived from income and goods and services taxes, with a negligible share from property taxes.
- At the subnational level, revenue from property taxes provides a much larger share of revenues than at the central level, and accounts for over 90% of revenues in four countries (Israel, Ireland, Greece and the United Kingdom).
- By contrast, the share of income taxes and goods and services taxes is lower at the sub-central level, the exceptions being Finland, Luxembourg and Sweden, where over 90% of sub-central revenues are derived from income taxes.

Figure 1.9. Composition of revenues of federal or central government (left) and sub-national government (right), 2017

Note: The left-hand panel (a) refers to only those taxes which are classified as central government taxes. Social security contributions paid to social security funds are excluded. The right-hand panel (b) refers only to those taxes which are classified as sub-central taxes (local and (where relevant) state taxes). Social security contributions paid to social security funds are excluded.

## Non-wastable tax credits

There are two kinds of tax credits that apply to income taxes (both personal and corporate):

- Non-payable or wastable tax credits are those that can only ever be used to reduce or eliminate a tax liability. They cannot be paid out to either taxpayers or non-tax payers as a benefit. They are, therefore, the same as a tax allowance or relief.
- In contrast, payable or non-wastable tax credits can be partitioned into two parts. One part is used to reduce or eliminate a tax liability in the same way as a wastable tax credit. The other part can be paid directly to recipients as a benefit payment, when the benefit exceeds the tax liability.

The OECD methodology for classifying non-wastable tax credits is set out in paragraphs 19 and 20 of the *Interpretative Guide*. This states that only the part of a non-wastable tax credit that is used to reduce or eliminate a taxpayer's tax liability should be subtracted in the reporting of tax revenues. This is referred to as the 'tax expenditure component' of the credit. In contrast, the part of the tax credit that exceeds the taxpayer's tax liability and is paid to that taxpayer is treated as an expenditure item and not subtracted in the reporting of tax revenues. This part is referred to as the 'transfer component'.

**Table 1.7. Effect of alternative treatments of non-wastable tax credits, 2017**

	Non-wastable tax credits in billions of national currency			Total tax revenue in billions of national currency			Total tax revenue as a percentage of GDP		
	Total value	Transfer component	Tax expenditure component	Net basis	Split basis (per current guidance)	Gross basis	Net basis	Split basis (per current guidance)	Gross basis
Australia	9.5	7.0	2.4	520.1	527.2	529.6	28.2	28.5	28.7
Austria <sup>1</sup>	0.3	0.1	0.2	154.5	154.6	154.8	41.8	41.8	41.9
Belgium	0.9	0.3	0.5	195.0	195.3	195.8	44.4	44.5	44.6
Canada <sup>2</sup>	11.6	10.5	1.1	692.2	702.7	703.8	32.3	32.8	32.9
Chile <sup>3</sup>	213.5	151.4	62.1	36 238.6	36 390.0	36 452.1	20.1	20.2	20.2

Germany	43.5	15.3	28.2	1 216.0	1 231.3	1 259.4	37.1	37.6	38.4
Iceland	2.8	2.3	0.4	979.0	981.4	981.8	37.4	37.5	37.5
Ireland	0.5	0.0	0.5	..	66.9	67.4	..	22.5	22.7
Israel <sup>5</sup>	1.6	1.6	0.0	411.8	413.4	413.4	32.4	32.5	32.5
Italy	10.3	1.2	9.1	726.6	727.8	736.8	42.1	42.1	42.7
Luxembourg <sup>6</sup>	0.2	..	..	..	..	21.4	..	..	38.7
Mexico	46.8	1.0	45.8	3 526.1	3 527.1	3 572.9	16.1	16.1	16.3
New Zealand	2.2	1.0	1.2	91.7	92.7	93.9	31.7	32.1	32.5
Norway	4.0	3.2	0.8	1 278.7	1 282.0	1 282.7	38.7	38.8	38.8
Slovak Republic <sup>6</sup>	0.3	..	..	..	..	28.1	..	..	33.1
Spain <sup>4</sup>	1.8	1.0	0.8	391.9	392.9	393.7	33.6	33.7	33.8
United Kingdom	29.5	26.0	3.5	655.9	681.9	685.4	32.0	33.3	33.4
United States	177.0	127.6	49.4	5 099.7	5 227.3	5 276.7	26.1	26.8	27.0

Note: In *Revenue Statistics*, the tax revenue data are reported on a split basis, unless indicated otherwise.

1. The children's tax credit is not regarded as a tax credit in the *Revenue Statistics 2018* and is treated entirely as an expenditure provision.
2. Some non-wastable tax credits cannot be split into the transfer and tax expenditure components. Their total values have been added to the transfer component.
3. In *Revenue Statistics*, the tax revenue data for Chile are reported on a net basis.
4. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes.
5. The data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.
6. In *Revenue Statistics*, the tax revenue data for Luxembourg and Slovak Republic are reported on a gross basis.

StatLink  <http://dx.doi.org/10.1787/888934054759>

Table 1.7 provides information on the non-wastable tax credits in 2017 for those countries reporting them in the *Revenue Statistics 2018* (though it may be that some countries with non-wastable tax credits do not appear in the table). It shows the amounts of the non-wastable tax credits and their two components together with the results of using the figures to calculate tax revenue values and the associated tax-to-GDP ratios. Table 1.7 also shows two alternative treatments:

- The ‘net basis’ which treats non-wastable tax credits entirely as tax provisions, so that the full value of the tax credit reduces reported tax revenues, as shown in columns 4 and 7.
- The ‘gross basis’ is the exact opposite, treating non-wastable tax credits entirely as expenditure provisions, with neither the transfer component nor the tax expenditure component being deducted from tax revenue, as shown in columns 6 and 9. This is the approach followed by the GFSM and the SNA.

Table 1.7 shows that, with some exceptions, the choice of method for reporting non-wastable tax credits has only a small impact on the ratio of total tax revenue to GDP. For the countries with available data, the differences between the ratios on a net basis and on a gross basis are one percentage point or more in only France, Germany and the United Kingdom, and between half a percentage point and one percentage point in Australia, Canada, Czech Republic, Italy, New Zealand and the United States.

## Notes

<sup>1</sup> Provisional 2018 figures are not available for Australia and provisional figures on social security contributions in Japan are also not available as at the time *Revenue Statistics* was published.

<sup>2</sup> In 2016, Iceland received revenues from one-off stability contributions from entities that previously operated as commercial or savings banks and were concluding operations. The revenue from these contributions led to unusually high tax revenues for a single year and consequently, Iceland’s tax-to-GDP ratio rose from 35.4% in 2015 to 50.8% in 2016, before dropping to 37.5% in 2017. This led to an artificial high in the OECD average tax-to-GDP ratio in 2016 of 34.4%. Without these one-off revenues in Iceland, the OECD average tax-to-GDP ratio would have been 34.0%, an increase of 0.2 p.p. relative to 2015.

<sup>3</sup> In 2017, U.S. taxpayers that had un-repatriated accumulated earnings abroad incurred a tax liability on those earnings due to the new tax law. However, U.S. taxpayers may pay any tax on the deemed repatriations in instalments over eight years so there may be a significant difference in the tax liability in 2017 represented in these figures from the actual receipt of tax revenue.

<sup>4</sup> See endnote 2 above.

<sup>5</sup> See endnote 3 above.

<sup>6</sup> The terms “value added tax” and “VAT” are used to refer to any national tax that embodies the basic features of a value added tax by whatever name or acronym it is known e.g. “Goods and Services Tax” (“GST”).

<sup>7</sup> For 1975, please see Table 1.4 of *Revenue Statistics*.

# **2** **Special feature: Identifying environmentally-related tax revenues in Revenue Statistics**

---

This chapter provides a special study on identifying environmentally related taxes in OECD countries from 1995-2017.

---

## Introduction

Environmentally related taxes are key policy instruments available to policy makers to influence environmental outcomes, in addition to their function in raising government revenues. They have received increasing attention from policymakers and researchers in recent years. Internalising the external environmental costs that remain unpriced by the market is a key element of cost-effective environmental policy (OECD, 2017<sup>[1]</sup>). There is a broad consensus in the economics literature that taxes allow this goal to be achieved in a manner that is environmentally effective, economically efficient<sup>1</sup> and socially inclusive (provided possible negative distributional impacts on vulnerable households are addressed through targeted measures). Many countries also use these taxes in complement to other measures to address pollution externalities.

Data on environmentally related tax revenue (ERTR) are used extensively in OECD country reviews (e.g. Environmental Performance Reviews, Economic Surveys), indicator reports (e.g. *Environment at a Glance*, *Green Growth Indicators*) and work on policy integration and structural policies.

This Special Feature builds on the work of the OECD's Environment Policy Committee (EPOC) to reconcile data on environmentally related taxes in the OECD *Policy Instruments for the Environment* (PINE) database with the OECD's *Revenue Statistics* and with Eurostat's National Tax Lists. Related work has focused on developing the OECD methodological guidelines on compiling accounts of ETRs in line with the System of Environmental Economic Accounting, SEEA (OECD, 2019<sup>[2]</sup>).

Reconciling the data in *Revenue Statistics* and in the PINE and Eurostat databases will ensure coherence and comparability of data from multiple sources across countries and thus improve the quality of data used for policy analysis.

This chapter discusses differences in reporting and classifications between the key sources of data on ETRs in OECD countries. It then highlights challenges in identifying ETRs in *Revenue Statistics*, and presents information on environmentally related taxes in OECD countries based on the *Revenue Statistics* database and the PINE database. The chapter concludes by presenting proposals aimed at facilitating the identification of ETRs in future editions of *Revenue Statistics*.

## Definition of taxes and environmentally-related taxes

The OECD Interpretative Guide (OECD, 2018<sup>[3]</sup>) includes a definition of taxes<sup>2</sup> which is consistent with the System of National Accounts (SNA) (United Nations, 2009<sup>[4]</sup>), the System of Environmental Economic Accounting (SEEA) (United Nations, 2014<sup>[5]</sup>) as well as the OECD PINE database (<http://oe.cd/pine>) and the OECD guidelines for compiling ETR accounts (OECD, 2019<sup>[2]</sup>):

In the OECD classification, the term “taxes” is confined to compulsory unrequited payments to general government. (OECD, 2018<sup>[3]</sup>)

This definition also includes revenue generated from permit schemes (e.g. auctioning or selling permits or certificates for greenhouse gas emissions or water effluents), which are classified as “non-recurrent taxes on the use of goods and on permission to use goods or perform activities” in the OECD classification.

### **Identifying environmentally related taxes in Revenue Statistics**

The OECD classification of tax revenues used in *Revenue Statistics*, set out in the Interpretative Guide at Annex A of *Revenue Statistics*, classifies taxes according to the economic function of their base (income, property, provision or consumption of goods and services), rather than according to the sector of the economy that they apply to or to the intended purpose of the tax. For example, a tax on fuels is recorded as an excise tax (category 5121) on the basis that it is a tax on a specific good or service, whereas

revenues from recurrent motor vehicle taxes are recorded as a recurrent tax on the use of goods (5210). The wide variety of forms taken by environmental taxes means that there is no single, nor even a common set, of classifications that can be used to identify ETRs in the *Revenue Statistics* classification. It is necessary to look beyond a classification according to the economic function of tax bases to identify these revenues within the *Revenue Statistics* framework.

In the economics literature, *environmental* taxes are motivated by internalising externalities through the alignment of tax rates with marginal external costs, or – more loosely – by using taxes to reduce environmentally harmful behaviour.<sup>3</sup> In practice, the identification of *environmentally related taxes* is made by considering the environmental relevance of tax bases ( (OECD, 2006<sup>[6]</sup>)), i.e. independent of the economic function of the base, and without requiring environmental motives for the application of the taxes, or the alignment of tax rates with marginal external costs. These considerations, in line with existing OECD work on this issue, yield the following definition of environmentally related taxes:

“*Environmentally related taxes are taxes whose tax base is a physical unit (or a proxy of it) of something that has a proven, specific, negative impact on the environment.*” (United Nations, 2014<sup>[5]</sup>)

Ideally, environmentally related tax bases will comprise physical units that are directly linked to environmental pressures (e.g. emissions, pollutant concentrations). However, for practical or administrative reasons, these tax bases are sometimes not directly taxed. Instead, inputs or outputs of activities closely linked to environmental pressures (e.g. fuel consumption, ownership of cars) are used. In such cases and in line with existing approaches, these tax bases should be used to identify environmentally related taxes. (Annexe 2.A., drawing on Table 1 in (OECD, 2019<sup>[2]</sup>)) provides a list of tax bases to identify environmentally related taxes. The list describes the currently identified tax bases with environmental relevance. There is no straightforward objective criterion that could be used to define what is “environmentally related” since such taxes cut across the standard tax classifications in the OECD Interpretative Guide.<sup>4</sup> Therefore, the list of environmentally related tax bases is a practical way to identify relevant taxes. The guidelines distinguish four environmentally related tax base categories: energy, transport, pollution and resources; with two sub-categories covering energy-related greenhouse gas (GHG) emissions (under *energy* taxes) and non-energy-related GHG emissions (under *pollution* taxes).

As ETRs cross-cut the standard tax classification used in *Revenue Statistics*, the four tax base categories are not directly comparable to the tax categories in the SNA and *Revenue Statistics*. However, the large majority of ETRs are likely to be included in the disaggregated tax categories on production and imports in the SNA (e.g. excise taxes, car registration taxes, pollution taxes) and on goods and services in *Revenue Statistics* (category 5000 of the classification, e.g. excise taxes, recurrent taxes on motor vehicle taxes, and revenues from trading permits).

## Existing sources of data on environmentally related tax revenue

The key sources of data on ETRs include *Revenue Statistics*, the PINE database and the Eurostat National Tax Lists. They are detailed below.

### **Revenue Statistics**

*Revenue Statistics* provides harmonised and detailed data on all tax revenues for OECD countries from 1965 to 2018, although data for all countries is not available until 1995 and data for 2018 is still preliminary. More recently, the *Revenue Statistics* series has expanded to include three regional publications in Africa, Asia and the Pacific, and Latin America and the Caribbean. Data for all countries from 1990 (where available) is included in the *Global Revenue Statistics Database*. As of 2018, detailed tax revenue statistics are available for over 95 countries.

The wide country coverage and the use of the OECD Interpretative Guide to classify the data in all countries included in the *Global Revenue Statistics Database* provide a unique source of comparable and reliable tax revenue data for use in tax policy analysis and reform.

Although data on ERTs does not fall within the common tax categories set out in the OECD Interpretative Guide, there is a high level of breakdown shown in country-specific taxes underneath the common categories set out in the Interpretative Guide. These country-specific taxes allow many environmentally related taxes to be identified in each individual country.

### **OECD PINE database**

The OECD *Policy Instruments for the Environment* (PINE) database, which was established in 1998, hosts a unique set of detailed information on more than 3500 environmental policy instruments in over 100 countries. PINE currently contains information on six types of market-based policy instruments (taxes, fees and charges, tradable permits, environmentally motivated subsidies, deposit refund schemes and voluntary agreements) tagged into 12 environmental domains: biodiversity, land management, natural resource management, air pollution, water pollution, waste management, land or soil contamination, noise, ozone layer, climate change, transport and energy efficiency. For more information, see <http://oe.cd/pine>.

The greatest value of the PINE database is that it collects detailed and structured information at the instrument level, usefully complementing other sources of more aggregated statistics. For tax instruments, in addition to annual revenue, other information is included such as the tax base, tax rate and exemptions. Such information is indispensable for an evaluation of the environmental impacts of the tax. The information is collected via a network of country experts, mostly in government agencies. Identification of environmentally related tax bases and their categorisation follows the guidelines described in (OECD, 2019<sup>[2]</sup>) see Box 2.1.

Annex 2.B provides an example of the correspondence between data reported to the OECD PINE database and *Revenue Statistics*.

### **EUROSTAT National Tax Lists**

Eurostat publishes revenue data for individual taxes (the National Tax Lists or NTL) imposed by 28 EU-member states as well as Iceland, Norway and Serbia from 1995 onwards.<sup>5</sup> Data are collected based on the European System of National and Regional Accounts (ESA 2010).

Information on the economic functions and categories of individual taxes is particularly helpful for this reconciliation exercise. Eurostat NTLs distinguish different categories of taxes: property taxes, recurrent taxes on immovable property, alcohol and tobacco taxes, and environmentally related taxes.<sup>6</sup> The recording of these data is fully compatible with the OECD definition of environmentally related taxes and the System of National Accounts.

The compilation of Eurostat tax lists is done with the National Tax Lists (the numbers presented here were extracted on 14 January 2019). The identification of the relevant taxes is done using the four different categories of environmentally related taxes: energy, transport, pollution and resources. In total, 650 tax revenue entries out of the 6700 are categorised as environmentally related.

Annex 2.B provides an example of the correspondence between data reported to the OECD PINE database and Eurostat NTLs.

### Box 2.1. OECD work on SEEA-compliant ERTR accounts

The System of Environmental Economic Accounting (SEEA) is an internationally agreed statistical framework that integrates economic and environmental data in a systematic, consistent and internationally comparable way to provide a comprehensive and multipurpose view of the interrelationships between the economy and the environment.

Environmentally related tax revenue (ERTR) accounts form part of the SEEA. ERTR accounts can be seamlessly integrated with a large range of conventional economic, environmental and social data, thus facilitating international comparisons and integrated policy analyses. Additionally, ERTR accounts are disaggregated by industries and households and can therefore be used in input-output and other industry-level studies.

The OECD has a long tradition of working on environmentally related taxation and has recently developed practical methodological guidelines for compiling ERTR accounts (OECD, 2019<sup>[2]</sup>). These guidelines intend to support building global SEEA databases and further advancing the implementation of the SEEA. The OECD guidelines are in line with the SEEA and the System of National Accounts (SNA), and build on existing guidance for applications in countries. They ensure, to the extent possible, coherence with available national and international data sources and manuals, including *Revenue Statistics*, the OECD Policy Instruments for the Environment (PINE) database and the IMF Government Finance Statistics Manual.

Therefore, the ERTR accounts are generally aligned with *Revenue Statistics* by sharing a common definition of taxes, applying accrual accounting and recording revenue acquired at different levels of government. Nevertheless, ERTR accounts cut across the standard tax categories set out in the OECD Interpretative Guide, given their focus on environmentally related taxes. Thus, the tax categories in the ERTR accounts (i.e. energy, transport, pollution and resource taxes) are not directly comparable to most tax categories in *Revenue Statistics*. However, the ERTR are implicitly covered in the more aggregated tax categories on goods and services recorded in *Revenue Statistics* (e.g. excise taxes, recurrent taxes on motor vehicles).

Work on the OECD guidelines started in 2018 and provided an opportunity to reflect on the conceptual foundations of existing accounting methods and identify aspects that might deserve to be further developed in the future:

- greater focus on taxes levied on greenhouse gas (GHG) emissions;
- four *memo items* (i.e. information items not included in the total) on certain land taxes, taxes on oil and natural gas extraction, resource rent taxes, and elevated value-added taxes levied on environmentally related tax bases; and
- a common platform between compilers of the industry-level ERTR accounts and the instrument-level information reported in the PINE database.

The guidelines were successfully tested in four pilot countries. The next steps will involve the collection of ERTR accounts from OECD members and interested accession and partner countries, starting in October 2019, with a view to integrating such reporting into the OECD's regular data collection process under the auspices of the Working Party on Environmental Information.

### Identifying environmentally related taxes in *Revenue Statistics*

A reconciliation between data on environmentally related taxes in *Revenue Statistics*, the PINE database and the EU National Tax Lists was conducted in 2018, drawing on ENV/EPOC/WPEI(2018)7. The

concordances have been validated by countries (WP2 delegates and PINE contacts) and the revised results on ERTs in *Revenue Statistics* and the PINE database are summarised below.

### ***Environmentally related tax revenue data reported to Revenue Statistics and PINE***

Differences between *Revenue Statistics* and the PINE database arise primarily due to (i) lack of suitable disaggregation of revenue streams in *Revenue Statistics* to allow ERTs to be identified and (ii) generic labels of taxes in *Revenue Statistics* that do not permit a match to the more detailed description of the environmentally related tax in the PINE database.

In order to reconcile the differences between these sources, the following approach is adopted:

1. Identify environmentally related taxes in *Revenue Statistics* and, for EU member countries, in National Tax Lists submitted to Eurostat (hereafter Eurostat-NTLs).
2. Compare with the list of taxes in OECD PINE and construct correspondence tables.
3. Compare the level of the revenue reported.

The first step of the exercise is specific to each data source and was done independently. Once the lists of environmentally related taxes were compiled, the comparison with PINE tax lists, the building of the correspondence table and the comparison of revenue levels are done with all data sources simultaneously.

The identification of *environmentally related* taxes in *Revenue Statistics* is done using (i) the hierarchical nomenclature of the OECD Interpretative Guide (set out in Annex A of *Revenue Statistics*) and (ii) a keyword search through the names of the 8250 taxes included in the global *Revenue Statistics* databases (data was extracted on 13 December 2018). The following keywords were used to pre-screen potential *candidates* of environmentally related tax:

- **Energy**, CO<sub>2</sub>, Power, Hydro, Oil, Coal, Gas, Diesel, Fuel, Electric, Petrol, Nuclear, Benzol, Pipeline.
- **Transport**, Motor, Car, Road, Air, Driving, Flight, Park, Driver, Highway, Aviation, Departure, Travel, Exit, Automobile, Boat, Vehicle, Passenger, Traffic, Dock, Rail, Ship, Tonnage, Plate, Tractor, Aero.
- **Pollution**, Hazard, Disposable, CFC, Lead, Insect, Plastic, Herb, Ozone, Fertilizer, Pesticide, Manure, Emission, Tyre, Waste, Sulphur, Nitrogen, PVC, Batter, Packaging, Packing, Rubber, Noise.
- **Resources**, Water, Hunt, Fish, Raw, Marine, Mining, Mine, Wood, Timber, Stump, Forest, Wild, Bauxite, Titanium, Gold, Silver, Metal, Logging, Protected, Fur, Animal.
- **Ecology**, Environment, Green, Natural, Climate, Kyoto.

The objective of the keyword search was to identify potential candidates for inclusion in PINE, and to easily spot *new* candidates in future releases of *Revenue Statistics*. Note that these *new* taxes could be either newly introduced, or a disaggregation of taxes that were previously reported under an aggregate heading.

Several categories of the OECD Interpretative Guide are important for the identification of environmentally related taxes. In particular, the classification of *Taxes on goods and services* (5000) is the most relevant. It includes all *Taxes and duties levied on the production, extraction, sale, transfer, leasing or delivery of goods, and the rendering of services* (5100), or *in respect of the use of goods or permission to use goods or to perform activities* (5200). In addition, some taxes of environmental relevance fall under *Other taxes* (6000), and few others concern some *Property taxes* (4000); e.g., forest tax, property tax on boats, payments for the change of use of forest land, forestry levies. Annex 2.B provides an example of the correspondence between data reported to *Revenue Statistics* and to the OECD PINE database.

## Challenges and correspondence found

The main challenge for the reconciliation exercise is the aggregation of reported revenue streams in *Revenue Statistics*. Some countries report only at the third or fourth level of the OECD Interpretative Guide classification hierarchy without providing country-specific breakdowns. At these levels, the only environmentally related revenue that can be directly identified in the standard classification is found in the fourth-level classifications 5211 and 5212: *recurrent taxes in respect of motor vehicles*. This aggregation in reporting is partly due to the nature of the OECD classification of taxes which is organised according to the economic characteristics of taxes (e.g. income, payroll, property, goods), whereas the identification of environmentally related taxes is done according to the environmental relevance of the tax base (e.g. freshwater abstraction, pesticide use, energy products, waste management). Ideally, environmentally related information in *Revenue Statistics* should be available at the individual-tax level, with environmentally related taxes reported separately, i.e. the lowest level of the hierarchy, which is country-specific.

Even where country-specific breakdowns are available, some individual-tax revenue streams are reported as aggregates and grouped with other items. For instance, *Revenue Statistics* includes country-specific entries such as “Ecological taxes”, “Taxes on pollution/resources”, “Other environmental taxes” and “Other taxes on the environment”, that do not allow the individual taxes to be easily identified. Similar issues arise in the Eurostat NTLs with generic entries labelled as “Pollution taxes”, “Other environmental taxes”, “Taxes and charges on environment and pollution”. In these cases, the revenue level of multiple PINE entries was compared against these aggregated revenue streams, and a tentative breakdown was developed.

In addition, individual-tax revenue streams are sometimes reported under rather generic labels that do not allow the precise nature of the tax-base (e.g. “Environmental tax”, “Environmental charge”, “Environmental incentive fee” or “Ecological tax”) to be reliably identified. In such cases, revenue streams from *Revenue Statistics* were considered for the reconciliation if they belonged to the OECD Interpretative Guide category 5000, while revenue streams from Eurostat-NTLs were considered only on the basis of their environmental category, independently of the label. The comparison of revenue levels with data in the PINE database allowed for some of the taxes with generic labels to be identified and even some mislabelled data to be detected (e.g., “Excise duties on petrol” in PINE and *Revenue Statistics* correspond to “Excise duties on gas” in Eurostat NTL for the Netherlands).<sup>7</sup> Slightly more descriptive labels of the reported taxes would facilitate the identification of the environmentally related revenue streams.

Another challenge for the reconciliation arises from differences across these data sources on how they report revenue at different levels of government. *Revenue Statistics* reports revenue collected by federal or central government, plus the combined aggregate of states/regions and the combined aggregate of local government revenues. The policy instruments included in the OECD PINE database are entered at the level of the government that introduces and controls the policy. As such, in the OECD PINE database, most of the revenue information is collected at the national level for nation-wide economic instruments (and some supra-national ones, such as European Union Emission Trading System (EU-ETS)), while sub-national tax revenue data are available for individual states or regions in respect of sub-national policies (e.g. Belgium).

The results of the 2018 reconciliation exercise are:

- Construction of a correspondence table, which maps individual tax entries among the three sources: *Revenue Statistics*, OECD PINE and Eurostat NTLs. The table contains about 700 PINE-*Revenue Statistics* and PINE-NTL correspondences. The remainder are unmatched entries, of which, about two thirds are sub-national policy instruments (e.g. India, United States) and one third are national instruments. Annex 2.B includes an example of the correspondences.
- The reconciliation exercise also allowed the inclusion of the revenue from auctioning of tradable permits, which had been previously excluded from the aggregates for most countries. In particular,

this concerns the inclusion of the revenue from auctions of permits under the EU-ETS. It is important to mention that the PINE database captures information on tradable permits separately to taxes; this is different to *Revenue Statistics* and Eurostat NTLs, where such revenue is reported as a tax item.

### **Calculation of country-level statistics**

The reconciled list of taxes is aggregated at the country-level across distinct environmentally related tax categories (see Annex 2.A for a more complete list of tax bases):

- **Energy:**
  - Energy products (fossil fuels and electricity) including those used in transportation (petrol and diesel).
  - CO<sub>2</sub> taxes
- **Transport:** One-off import or sales taxes on transport equipment, recurrent taxes on ownership, registration or road use of motor vehicles, and other transport-related taxes. (Note that this definition excludes all taxes on automotive fuels.)
- **Pollution:**
  - *Air pollution:* Taxes on e.g. SO<sub>x</sub> and NO<sub>x</sub> emissions.
  - *Ozone-depleting substances:* Taxes on specific substances, such as chlorofluorocarbons (CFCs), carbon tetrachloride, chlorofluoromethane (HCFCs) and other ozone-depleting substances.
  - *Water pollution:* Taxes on discharge of wastewater; pesticides and fertilisers.
  - *Waste management:* Taxes on final disposal of solid waste, on packaging (e.g. plastic bags) and other waste-related taxes (e.g. batteries, tyres).
- **Resources:**
  - *Mining and quarrying:* Mining royalties, excavation taxes (e.g. sand, gravel).
  - *Freshwater:* Taxes on freshwater abstraction and piped water. (Fees and charges related to water supply are not included.)
  - *Hunting and fishing taxes.*

The correspondence of taxes and tradable permits to the environmental categories presented above is done according to the tax base of each instrument. Information from PINE on the introduction and discontinuation of instruments is used to impute zero revenues. In particular, the field “year of introduction” is used to impute zero revenue before the introduction of the instrument. The last year marked in the “year of revision” is used for those instruments which have been discontinued, and zeros are imputed for subsequent years.

### **Trends in environmentally related taxes in OECD countries**

Environmentally related tax revenues (ERTRs) in OECD countries form a small but important part of total tax revenues, accounting for 5.1% of total tax revenues on a weighted average<sup>8</sup> basis and 6.9% on a simple average basis in 2017, with a range from 2.8% in the United States to 12.5% in Slovenia and Turkey. Similarly, as a share of GDP, ETRTs account for 1.6% of GDP on a weighted average basis and 2.3% on a simple average basis, with their shares in GDP ranging from 0.7% in the United States to 4.5% in Slovenia (Table 2.1).

Since 1995, the earliest year for which Revenue Statistics data is available for all OECD countries, most countries have seen a decline in ETRTs as a share of tax revenues. Because of this, both the weighted

and simple average shares of ETRs to total tax revenue fell significantly (from 7.3% to 6.9% of tax revenues on a simple average basis and from 6.1% to 5.1% on a weighted average basis). In 2017, ETRs were lower as a share of total taxation than in 1995 in 26 OECD countries, with an average decrease of 1.7 percentage points in these countries. (Figure 2.1, Table 2.1). This fall may be due to a number of factors, discussed further in Box 2.1.

**Figure 2.1. Environmentally related tax revenues in OECD countries, 1995 & 2017**

% of tax revenues

Note: OECD-W refers to the weighted average (as shown in PINE) and OECD-S to the simple average. For Canada, Korea and Israel, data for 2014 are used for subsequent years as data for later years are not available in the PINE database and ETRs cannot be identified in Revenue Statistics with sufficient precision to be included. For the same reason, data for 2016 are used for 2017 in Australia and the United States.

Source: OECD (2019c) OECD Environment Statistics (database).

StatLink  <https://doi.org/10.1787/888934054778>

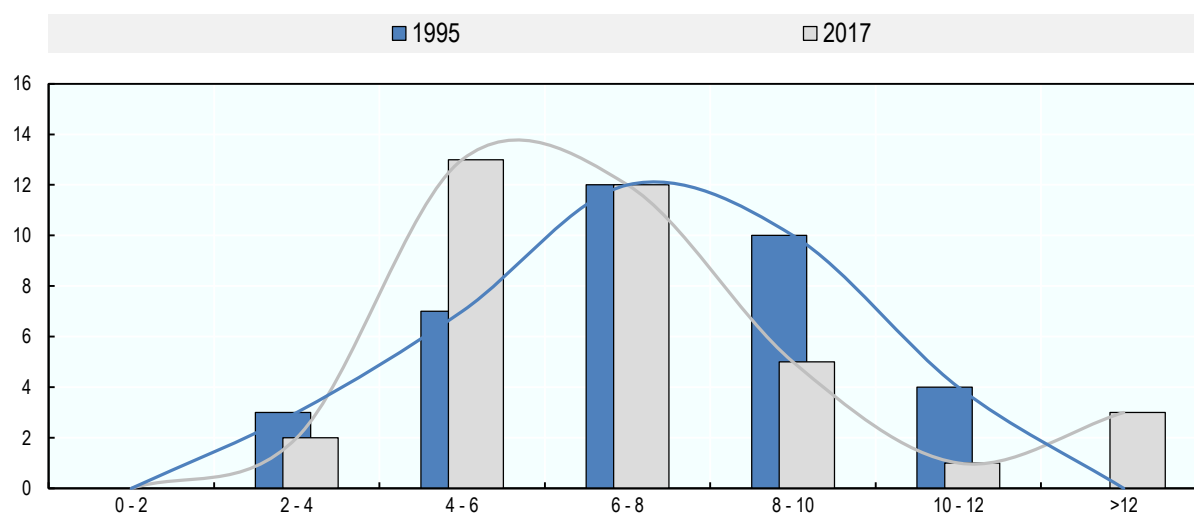

The remaining 10 OECD countries had increases in ETRs over the period as a share of total taxation, with an average increase of 2.9 percentage points in these countries. The largest increases were seen in:

- Latvia, which saw an increase from 3.3% of total tax revenues to 12.2%, due to higher energy taxes;
- Estonia, from 2.7% to 8.8%, entirely from energy tax revenues increasing; and
- Turkey, which saw an increase from 7.2 to 12.5% with roughly equal increases in energy and transport taxes.

Overall, the distribution of OECD countries around these averages has changed slightly. In 2017, the distribution was skewed to the left, with 25 OECD countries having ETRs of between 4% and 8% of total tax revenues, whereas in 1995, the distribution was more even, with 22 countries having ratios between 6% and 10% (Figure 2.2). This indicates that there has not been a general shift towards ETRs as a revenue source in OECD countries.

**Figure 2.2. Distribution of ETRs as % of total taxation in OECD countries, 1995 & 2016**

Number of countries in each bracket

Note: For Canada, Korea and Israel, data for 2014 are used for subsequent years as data for later years are not available in the PINE database and ETRs cannot be identified in Revenue Statistics with sufficient precision to be included. For the same reason, data for 2016 are used for 2017 in Australia and the United States.

StatLink  <https://doi.org/10.1787/888934054816>

As a share of GDP, ETR in OECD countries have remained relatively steady between 1995 and 2017, with no clear trends emerging. On a simple average basis, ETRs increased as a share of GDP in the late 1990s to a high point of 2.6% of GDP in 1998 and 1999 (which were also the high point for the weighted average, at 1.9% of GDP), before decreasing relatively steadily until 2008, picking up in 2009, and slowly increasing since. Half of the OECD countries had ETRs of between 2.1% and 3.2% of GDP in 1999 and between 1.7% of GDP and 2.9% of GDP in 2017, as shown by the interquartile range in Figure 3. The interquartile range decreased after 1999, before increasing slowly after 2008. The median followed a similar trend to the simple mean across the period, although increased more sharply after the financial crisis to a small peak in 2010, followed by a greater decrease (Figure 2.3).

## Box 2.2. Environmentally related taxes as a share of GDP

The tax-to-GDP ratio is the principal indicator used in Revenue Statistics (see Box 1.2 in chapter 1 for further information). Taxes are expressed as a share of GDP both to allow comparability across countries and over time and to provide an indication of the scale of tax revenues against the production of the economy from which they were generated. The indicator is also used for individual tax categories, as unlike the share of total tax revenue, the share of a tax to GDP is not contingent on the levels of other taxes in the economy.

Although the indicator is a useful tool, it has some limitations when applied to ETRTs, as their tax base is not necessarily linked to GDP and may follow quite different trends. Ideally, the tax base for environmentally related taxes is a close proxy for the environmental harm itself such as the emission of CO<sub>2</sub> or a pollutant, or the purchase, import or use of a unit of fuel. Over time, GDP and environmentally related tax bases can decouple, for example as the economy becomes less carbon-intensive as a consequence of environmental policy or other developments. Such a decoupling has been seen, for instance, in several countries that have implemented environmentally related taxation, including Sweden and Norway. This will result in a fall in the share of ETRTs to GDP, but is in fact the intended outcome of such a policy. Similarly, a country with a carbon-intensive economy may have higher ETRTs as a share of GDP than a country with a less carbon-intensive economy, even if the tax rate on environmentally related bases is lower.

Other factors are also important in interpreting changes in ETRTs expressed as a share of GDP, which may result from a shift within the base of the environmentally related tax. For example, a structural shift from a high-taxed fuel to a lower-taxed fuel will result in lower ETRTs. Similarly, deployment of new technologies such as solar and wind power, or fuel-efficient heating technology, could result in a decrease in ETRTs.

Given that environmentally related tax rates are typically defined in physical units (e.g., per tonne) and hence are set in nominal terms. Without inflation adjustment, the value of these rates decreases in real terms over time. While some countries, for example Denmark, the Netherlands and Sweden have implemented such adjustments, most OECD countries do not yet apply inflation adjustments.

Finally, it is important to consider other indicators alongside the ETRTs-to-GDP ratio when evaluating a country's environmental policy. One alternative approach is to compare the level of environmentally related taxes to the environmental harm associated with the tax base. For example, the OECD's Taxing Energy Use and Effective Carbon Rates publications compare taxes on energy use and carbon prices resulting from emissions trading systems against a benchmark value for the climate damage caused by the use of the energy products. Indicators developed in these publications, such as the carbon pricing gap, provide important complementary information in understanding countries' environmental tax and carbon pricing efforts.

In 2017, revenues from ETRT in OECD countries ranged from 0.7% of GDP in the United States to 4.5% in Slovenia (Table 2.1). Across the period, Denmark had the highest level of ETRTs as a percentage of GDP from 1995 to 2011 (with the exception of 1998), and Slovenia had the highest level in 1998 and from 2012 to 2017. The lowest level of ETRTs as a share of GDP was seen in Mexico in 1995 and 1996, the United States from 1997 to 2004, Mexico from 2005 to 2014, during which time this share was negative in several years,<sup>9</sup> and the United States from 2015 onwards.

StatLink  <https://doi.org/10.1787/888934054797>

In monetary terms, the greatest amount of tax revenues, in USD adjusted for purchasing power parity, were raised by the United States, at USD 121 229 million in 2016 (2017 data are not available). Italy had the second highest revenues from ETRs at USD 69 879 million in 2017, and three other countries (Japan, Turkey and the United Kingdom) also had revenues of greater than USD 60 000 million (Table 2.2).

Figure 2.3. Distribution of ETRs over time in OECD countries

% of GDP

Note: OECD-S refers to the simple average. For Canada, Korea and Israel, data for 2014 are used for subsequent years as data for later years are not available in the PINE database and ETRs cannot be identified in Revenue Statistics with sufficient precision to be included. For the same reason, data for 2016 are used for 2017 in Australia and the United States.

StatLink  <https://doi.org/10.1787/888934054854>

The greatest share of ETRs in OECD countries in 2017 comes from taxes on energy, predominantly on road fuels, with this share accounting for 71% of total revenues on both a simple and weighted average basis, and over 50% of total ETRs in all countries (Figure 2.4).

Transport taxes accounted for the second largest share of ETR in 2017 (both on average, at 26% weighted and 25% unweighted, and in every country except Estonia, France, Lithuania, the Slovak Republic and Slovenia). Pollution and resource taxes play a more minor role: in all but eight OECD countries (Czech Republic, Estonia, France, Iceland, Lithuania, Netherlands, Slovak Republic, Slovenia) they accounted for less than 5% of ETRs in 2017.

The situation in 1995 was relatively similar: energy taxes then played the biggest role in the composition of ETRs, at 73% on a weighted average basis and 70% on a simple average basis, although they were under 50% of ETRs in five countries (Figure 4). Transport taxes accounted for a slightly lower proportion, at 26% (weighted) and 24% (unweighted) on average.

Figure 2.4. Composition of ETRs in OECD countries in 2017

% of all ETR

Note: OECD-W refers to the weighted average and OECD-S to the simple average. For Canada, Korea and Israel, data for 2014 are used for subsequent years as data for later years are not available in the PINE database and ETRs cannot be identified in Revenue Statistics with sufficient precision to be included. For the same reason, data for 2016 are used for 2017 in Australia and the United States.

Source: OECD Environment Statistics (database) (OECD, 2019<sup>[7]</sup>).

StatLink  <https://doi.org/10.1787/888934054873>

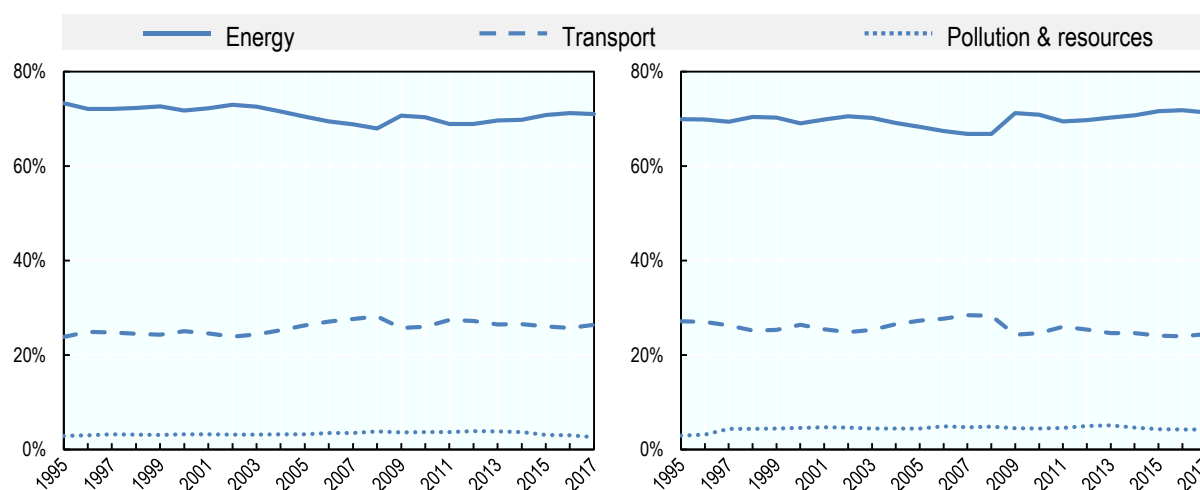

On both a weighted and a simple average basis, there has been a shift towards taxes on energy following the recent financial crisis and away from transport taxes. While revenues from both dropped as a share of GDP in 2008 and 2009, revenues from energy taxes recovered to pre-crisis levels relatively quickly and have increased slowly since. Revenues from transport taxes have not recovered to the same extent and, on a simple average basis, represent a comparatively lower share of total ETRs, on average, in 2017 than earlier in the period. OECD countries have become more similar, in having a higher share of revenues from energy rather than transport taxes in 2017 compared to 1995.

Finally, taxes on pollution and natural resources represent only a small portion of ETRs in most countries and on average. This could change in the future if countries start placing a greater emphasis on addressing water pollution, sustainable resource use or conservation of biodiversity.

While comparisons of ETRs in OECD countries provide a useful starting point for analysing the impact of environmental taxation, comparing only the levels of revenues does not provide the full picture of a country's environmental policy as it does not provide information on the levels of tax rates or the exemptions applied. Other parts of the OECD PINE database, including information on tax rates and exemptions, allows deeper assessment of the environmental impacts of the taxes. In addition, governments may choose to implement environmental policy using a range of other instruments, including fees and charges, expenditures (both direct and subsidies) and regulation, some of which are also detailed in the PINE database (see <http://oe.cd/pine> for information on the use of alternative instruments in countries).

Figure 2.5. Trends in composition of ETRs (OECD average), 1995-2017

% of ERTR

Note: For Canada, Korea and Israel, data for 2014 are used for subsequent years as data for later years are not available in the PINE database and ETRs cannot be identified in Revenue Statistics with sufficient precision to be included. ## Conclusion

Reconciling data on environmentally related tax revenue (ERTRs) in *Revenue Statistics* with the PINE database achieves a greater coherence of data across sources of similar information. This requires identification of environmentally related tax revenue in *Revenue Statistics*, which can be complicated due to (i) aggregation of multiple revenue streams and (ii) generic labels used in countries' submissions. Countries are encouraged to report revenue streams from environmentally related taxes separately as a country specific tax in *Revenue Statistics* (or using a breakdown that follows the ERTR tax categories) and to use labels that allow such taxes to be more clearly identified (e.g. "tax on NO<sub>x</sub> emissions" instead for "environmental tax").

USA	61.7	36.9	1.4	74 792	44 691	1 745	121 229
OECD-W	71.0	26.4	2.6				807 242 <sup>10</sup>
OECD-S	71.2	25.0	3.8	-	-	-	-

Note: OECD-W refers to the weighted average and OECD-S to the simple average. For Canada, Korea and Israel, data for 2014 are used for subsequent years as data for later years are not available in the PINE database and ETRs cannot be identified in Revenue Statistics with sufficient precision to be included. For the same reason, data for 2016 are used for 2017 in Australia and the United States. OECD Environment Statistics (database) (OECD, 2019<sub>[7]</sub>).

StatLink  <https://doi.org/10.1787/888934054835>

The reconciliation of *Revenue Statistics* with the PINE database has allowed several conclusions to be drawn:

- ETRs in OECD countries in 2017 range from 2.8% of total tax revenues in the United States to 12.5% in Slovenia and Turkey, accounting for 5.1% of total tax revenues on a weighted average basis and 6.9% on a simple average basis. Similarly, as a share of GDP, ETRs account for 1.6% of GDP on a weighted average basis and 2.3% on a simple average basis, with their shares in GDP ranging from 0.7% in the United States to 4.5% in Slovenia.
- Since 1995, there has been no trend that indicates OECD countries are moving toward sourcing a greater share of tax revenues from environmentally related taxes bases, and OECD countries have not become more similar in the levels of ETRs observed either as a share of total tax revenues or of GDP.
- The largest share of ETRs in OECD countries in 2017 was derived from energy taxes, both on average and in nearly every OECD country, accounting for nearly three-quarters of ETRs.
- On average, the reliance of OECD countries on energy tax revenues (as a share of all ETRs) increased after the financial crisis, offset by a decrease in revenues from transport taxes.

As part of its work on developing methodological guidelines for compilation of ETR accounts in line with the SEEA, the OECD is also developing a joint platform to ensure that the instrument-level information in PINE is consistent with the more aggregated statistics reported in ETR accounts. Similarly, one of the goals of this Special Feature is to achieve consistency between *Revenue Statistics* on the one hand, and the OECD PINE database and ETR accounts on the other hand, by encouraging a higher disaggregation of ETR data in *Revenue Statistics*.

## Annex 2.A. List of environmentally related tax bases

Annex Table 2.A.1. List of environmentally related tax bases

Tax base category	Details	Environmentally related tax bases (consumption, production and trade as well as measured and estimated values; if appropriate)
Energy including fuel for transport	<i>Energy products for transport purposes</i>	Unleaded petrol, leaded petrol, diesel, other energy products for transport purposes (e.g., LPG, natural gas, kerosene or fuel oil)
	<i>Energy products for stationary purposes</i>	Light fuel oil, heavy fuel oil, natural gas, coal, coke, biofuels, electricity, district heat, other energy products for stationary use
	<i>Energy related GHG emissions</i>	Energy related carbon content, energy related emissions of CO <sub>2</sub> and other GHGs (including proceeds from permit schemes)
Transport excluding fuel for transport		Motor vehicles: production, trade or sale (one off taxes), registration or use (recurrent, e.g., annual taxes), vehicle insurance (excludes general insurance taxes), road: use (e.g., motorway taxes), congestion (e.g., congestion charges and city tolls), other means of transport: railways, water (e.g., taxes on ships), air (e.g., taxes on flights and flight tickets)
Pollution	<i>Non-energy related GHG emissions</i>	Non-energy related carbon content (e.g., peat), emissions of CO <sub>2</sub> and other GHGs not related to energy (e.g., cattle-breeding, rice cultivation, synthetic fertilizer application, meat diets, cement; including proceeds from permit schemes)
	<i>Pollutant emissions to air</i>	NO <sub>x</sub> emissions, SO <sub>x</sub> emissions, other air pollutants (excluding GHGs)
	<i>Ozone depleting substances</i>	Ozone depleting substances (e.g., CFCs, halons, HCFCs)
	<i>Effluents to water</i>	Effluents of oxidisable matter (BOD, COD), other effluents to water, effluent collection and treatment (fixed annual taxes)
	<i>Non-point sources of water pollution</i>	Pesticides (based on e.g. chemical content, price or volume), artificial fertilisers (based on e.g. phosphorus or nitrogen content or price), manure (based on nitrogen released)
	<i>Waste management</i>	Waste collection, treatment or disposal, individual products (e.g., batteries, tyres, lubricants), packaging (e.g., beverage containers, plastic bags)
	<i>Noise</i>	Noise (e.g., aircraft take-off and landings)
	<i>Radiation</i>	Radiation, radioactive substances
Resources	<i>Resource extraction, abstraction, harvesting</i>	Fresh-water abstraction, harvesting of biological resources (e.g., timber, meat, hunted and fished species, wild plants and animals), extraction of raw materials (excluding oil and natural gas; including exploration activity), landscape changes (e.g., cutting of trees)

## Notes

<sup>1</sup> Split incentives (e.g. owner-tenant), steep marginal damage costs (e.g. exposure to hazardous substances), etc., are some of the well-known exceptions when the literature tends to argue in favour of regulatory instruments (e.g. maximum emission limits, minimum efficiency standards and other technology prescriptions) or some combination of the two (i.e. taxes and regulations).

<sup>2</sup> There is on-going work that may lead to the revision of the OECD definition of taxes to include also payments to supra-national institutions.

<sup>3</sup> For a more detailed discussion see OECD (2017).

<sup>4</sup> For instance, in the SNA, taxes are classified regarding taxes on production and imports, income and wealth, and capital. In the OECD *Revenue Statistics*, taxes are classified according to income, profits, capital gains, earnings, payroll, number of employees, property, goods and services, and others. Nevertheless, the large majority of ERTR is likely to be part of taxes on production and imports in the SNA and on goods and services in the OECD *Revenue Statistics*.

<sup>5</sup> Aggregated statistics are also published for Liechtenstein and Switzerland.

<sup>6</sup> Called *environmental taxes* by Eurostat.

<sup>7</sup> This confusion arose because of the similarity of gas and gasoline (or petrol) in English and is being corrected in the National Tax Lists.

<sup>8</sup> The weighted average is calculated using the shares of revenues in USD, adjusted for PPP, for each country. See footnote below for an explanation of why these figures will differ slightly from those reported in PINE.

<sup>9</sup> The OECD *Revenue Statistics* database and the PINE database treat revenues from Mexico's fuel price controlling formula differently, which was in place from 2006 to 2014. *Revenue Statistics* includes only the positive elements of this formula as revenues, whereas the PINE database includes also the implicit subsidy. Data in this Special Feature for Mexico are based on the information provided by delegates for the PINE database and may therefore differ from those reported elsewhere in *Revenue Statistics*.

<sup>10</sup> This figure represents the total, rather than the weighted average.

# 3

## Tax Levels and Tax Structures, 1965-2018

---

Chapter 3 provides an overview of tax levels and tax structures in OECD countries from 1965-2018.

---

In all of the following tables the symbol (...) indicates not available/or not applicable. The main series in this chapter cover the years 1965 to 2017. A selection of years are shown in this chapter because of lack of space. The complete series is available on line. Data for 1955 and 1960 (for nineteen OECD countries) are provided in part V of the 1998 edition of this Report.

The Gross Domestic Product (GDP) figures are based on the 2008 System of National Accounts (SNA) for all OECD countries.

In this chapter, the OECD average for 2016 in all tables has been calculated excluding the one-off revenues from stability contributions in Iceland.

### Box 3.1. Treatment of capital transfers

Footnotes to Tables 3.1 to 3.18 refer to the treatment of the capital transfers that some countries make to account for taxes that have been assessed but not collected. The capital transfer has been subtracted from the total tax revenue and this reduction has been allocated between tax headings in proportion to their tax revenues.

This applies to the following countries:

- Denmark from 1971.
- France from 1992.
- Lithuania from 1999.
- Spain from 1995.
- Switzerland from 1990.

Table 3.1. Total tax revenue as % of GDP

Note: Full time series can be accessed at <http://oe.cd/full-time-series>.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.

2. From 1991 the figures relate to the united Germany.

3. 2018: calculated by applying the unweighted average percentage change for 2018 in the 34 countries providing data for that year to the overall average tax to GDP ratio in 2017. The 2016 OECD average tax-to-GDP ratio includes the one-off revenues from stability contributions in Iceland.

Note: This table is based on the archive of the Gross domestic product (GDP) dataset as of the 27th June of 2019, prior to the 2019 benchmark revisions. As it may happen that countries only cover results for a limited time period when first publishing the results of their benchmark revision, this dataset provides users with longer time series based on the methodology as used before the benchmark revision.

1. GDP is fiscal year. The year Y is calculated (at annual rate) as the average of: Q2(Y) to Q1(Y+1) for Japan; and Q3(Y) to Q2(Y+1) for Australia and New Zealand.

# **4** Country tables, 1990-2017

---

Chapter 4 provides a summary of tax revenues by category and by level of government for each OECD country from 1990-2017.

---

## 4.1. Tax revenue and % of GDP by selected tax category and by level of government

In all of the following tables the symbol (...) indicates not available/or not applicable. The main series in this chapter cover the years 1990 to 2017. Figures referring to 1965-1989, 1991-1999, 2001-2009 and 2011-2014 have been omitted because of lack of space. A complete series is, however, available on line. Data for 1955 and 1960 (for nineteen OECD countries) are provided in part V of the 1998 edition of this Report.

The Gross Domestic Product (GDP) figures are based on the 2008 System of National Accounts (SNA) for all OECD countries.

### Box 1.1. Treatment of capital transfers

Some tables refer to the treatment of the capital transfers that some countries make to account for taxes that have been assessed but not collected. The capital transfer has been subtracted from the total tax revenue and this reduction has been allocated between tax headings in proportion to their tax revenues.

This applies to the following countries:

- Denmark from 1971.
- France from 1992.
- Lithuania from 1999.
- Spain from 1995.
- Switzerland from 1990.

Note: More detailed country data and country notes are available in online chapter 5 "Country Tables, 1965-2017": <https://doi.org/10.1787/0bbc27da-en>. Full time series can be accessed at <http://oe.cd/full-time-series>.

The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue. Therefore, the tax revenue amounts are different to those reported in the detailed country data available in online chapter 5 "Country Tables, 1965-2017".

Note: More detailed country data and country notes are available in online chapter 5 "Country Tables, 1965-2017": <https://doi.org/10.1787/0bbc27da-en>. Full time series can be accessed at <http://oe.cd/full-time-series>.

The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue. Therefore, the tax revenue amounts are different to those reported in the detailed country data available in online chapter 5 "Country Tables, 1965-2017".

Note: More detailed country data and country notes are available in online chapter 6 "Tax revenues by sub-sectors of general government":

<https://doi.org/10.1787/0bbc27da-en>. Full time series can be accessed at <http://oe.cd/full-time-series>.

The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue. Therefore, the tax revenue amounts are different to those reported in the detailed country data available in online chapter 6 "Tax revenues by sub-sectors of general government".

The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue. Therefore, the tax revenue amounts are different to those reported in the detailed country data available in online chapter 5 "Country Tables, 1965-2017".

Note: More detailed country data and country notes are available in online chapter 5 "Country Tables, 1965-2017": <https://doi.org/10.1787/0bbc27da-en>. Full time series can be accessed at <http://oe.cd/full-time-series>.

The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue. Therefore, the tax revenue amounts are different to those reported in the detailed country data available in online chapter 5 "Country Tables, 1965-2017".

Note: More detailed country data and country notes are available in online chapter 6 "Tax revenues by sub-sectors of general government":

<https://doi.org/10.1787/0bbc27da-en>. Full time series can be accessed at <http://oe.cd/full-time-series>.

The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue. Therefore, the tax revenue amounts are different to those reported in the detailed country data available in online chapter 5 "Country Tables, 1965-2017".

## 4.2. Memorandum tables

Table 4.73 shows different sources for financing social benefits, beyond compulsory social security contributions reported in section 4.1. In addition, this table shows also data on other taxes, on voluntary contributions to government and on compulsory contributions to private sector.

Table 4.74 shows social security contributions and payroll taxes paid by government. During the revision of the Interpretative Guide in 1984, the question arose of how to treat taxes paid by government. The two most prominent examples of such taxes are social security contributions and payroll taxes paid by government in respect of its employees. After a long discussion it was decided that the data shown in this publication should continue to include taxes paid by government (see §5 of the Interpretative Guide in annex A).

Whilst it was recognised that for certain purposes (e.g. to show the cash flow to the government sector from the private sector) it would be appropriate to eliminate taxes paid by one sector of government to another or tax payments between different units of the same sector of government, the view was taken that to record tax flows in the context of the economy as a whole required that taxes paid by government should be included in the data. This treatment ensures that the different resource flows of an economy, including the calculation of the output of government, are measured consistently in after-tax units. Nevertheless, it was decided that data on identifiable taxes paid by government should be separately identified in a memorandum item and this is the purpose of the country tables which follow.

The data that are reproduced in the following tables refer to actual compulsory payments made by general government in respect of their employees. Fictive, voluntary and imputed contributions are excluded from these data. The definitions of social security contributions, payroll taxes and general government are those set out in §35 to §41, §42 and §3 to §4 of the Interpretative Guide. Information on the other taxes paid by government (namely property taxes and consumption taxes) is not available in most countries, although it is believed that in all countries taxes based upon payroll are the most important taxes paid by government. In many cases, the data are estimates and are not always constructed on a basis consistent with that used in the main tables.

1. For Australia, the total differs from the sum of the four levels of government. The difference is due to a multi-jurisdictional (University) sector specific to this country. This sector contains units where jurisdiction is shared between two or more governments, or where classification of a unit to a jurisdiction is otherwise unclear. The main type of units currently falling into this category is public universities.

# **5** Detailed country tables, 1965-2017

---

Chapter 5 provides detailed country information on tax revenues for each OECD country from 1965-2017.

---

## 5.1. Tax revenues

In all of the following tables the symbol (...) indicates not available/or not applicable. The main series in this chapter cover the years 1965 to 2017. For reasons of space, a selection of years are shown in these tables. A complete series is, however, available on line. Data for 1955 and 1960 (for nineteen OECD countries) are provided in part V of the 1998 edition of this Report.

.. Not available

Note: Data are on a fiscal year basis beginning 1st July.

From 1998 taxes are recorded on an accrual basis; prior to that they were on a cash basis.

Direct taxes paid by public trading enterprises are excluded from receipts.

The figures for total tax revenue do not match the published totals in Taxation Revenue Australia. The latter is based on an accrual IMF GFS methodology and there are some differences between that and the OECD equivalent.

Heading 5213 includes radio and television licenses fees, though these are usually not regarded as a tax revenue in the OECD list.

Headings for non-wastable tax credits 1110 and 1210 include the private health insurance tax offset, family benefit, baby bonus tax offsets (paid during the 2003-04 budget year), film tax offset, and research and development tax offsets. The estimation of non-wastable credits into the expenditure and transfer components is in accordance with the OECD guidelines on the treatment and the data for this memorandum item has been provided by the Australian Taxation Office.

.. Not available

Note: Year ending 31st December.

From 1995 data are on accrual basis.

Following national practice, one-third of the revenues from stamp fees (heading 6000) and fifty percent of the revenues from administration duties (heading 6000) are treated as tax revenues, the remainder being treated as non-tax revenue.

From 1988 onwards promoting residential building is being mainly financed by capital transfers from the Federal Government to the Länder. For the years 1985 to 1987 legally fixed shares of some taxes have been transmitted automatically from Federal Government to the Länder for this purpose and these funds have been classified as tax receipts of the Länder in those years. From 1988, they are classified as Federal Government tax revenues. This break in the time series (1987/1988) affects only the shares of the different subsectors and not total tax revenues.

From 1998 contributions of interested persons and parking duties are classified as non-tax revenues (sales) and no longer reported under heading 6000.

Note: From 2001, all data are for the year ending 31st December. For 2000 and earlier years, data for the Federal, Provincial and Territorial governments and Social security funds are on a fiscal year basis commencing 1st April. Data for local government are on a fiscal year basis commencing 1st January.

From 1999 data are on accrual basis except that personal income taxes are on a modified cash basis.

There are some minor differences between the data for the years 1965 to 1978 and those for subsequent years. These mostly relate to the inclusion of fines and penalties or late payment of taxes and deductions for the child tax credits in the data for the years 1979 to 1983.

Heading 1210 - Taxes federal government: Federal corporate taxes include capital taxes.

Heading 2000: Includes receipts from the Canadian Pension Plan, Quebec Pension Plan, Unemployment Insurance Fund and Provincial Health Insurance. Premiums, Medicare Premiums and Social Insurance levies but excludes that part of the taxes on income and sales taxes earmarked for old age security. The practice of earmarking these taxes was discontinued in June 1975.

Heading 4400: From 2002 onward includes land transfer taxes of the provincial, territorial and local governments. Prior to 2002 land transfer taxes of the local government were included in line 6000 and those provincial and territorial governments were included in line 4520.

Heading 5121: The large increase in this heading between 1980 and 1981 is due to the introduction of a 'special petroleum compensation charge', a 'Canadian ownership special charge' and to an increase in the natural gas tax of C\$ 2399 millions.

Heading 5122: From 1988, profits on fiscal monopolies include lottery profits.

Heading 5128: From 1988, other taxes of Federal Government include the annual fees for managing the spectrum (airwaves) allocation to the cellular industry.

Heading 5211: Some Québec motor vehicle licence administrative fees are included in sales of goods and services for the period 1988-89 to 1997-98. From 1998-99 onward, these fees are included under other taxes - motor vehicle licences.

.. Not available

Note: Year ending 31st December.

From 1988 data are on accrual basis.

Finland has an imputation system where the full credit is taken into account in shareholders taxation. According to estimates made by the National Board of Taxation, the credit given to shareholders was 193 millions euros in 1991; the effects on personal income taxation are estimated.

Headings 2120 and 2320: The breakdown of contributions paid by employees and self-employed or non-employed is estimated.

Heading 4200: All figures in this subheading are estimated.

Heading 4400: Stamp duties include payment for some government services where the levy can be regarded as required (the levy is linked to the cost of providing the service). However they are classified as taxes and recorded under this subheading as taxes on financial and capital transactions because the amounts involved cannot be identified.

Heading 5121: The negative item under the title 'Price difference compensations' refers to the subsidies paid out on agricultural products under the price compensation scheme which can be offset against any positive tax liability which arising under the same scheme. From 1983 this item has been offset against revenues from excises on certain foodstuffs, on medium and stronger beer and on non-alcoholic beverages.

Heading 5126: Prior to 1979, no figures are available for amounts paid under the Fire protection levy .

Heading 5212: Prior to 1990, a part of the tax is paid by 'households'.

.. Not available

Note: Calendar year ending on December 31st.

From 1992, the data are on an accrual basis.

From 1970, figures were calculated according to the new System of National Accounts and are not, therefore, comparable to those of the previous years.

The section 2000 includes certain voluntary contributions.

The section 4220 corresponds to the remuneration for the guarantee of the State given to savings banks.

Source: General Account of the Administration of finances for the figures of fiscal receipts. OSCE for the figures of Social Security from 1965 to 1969, and ESA for the following years.

.. Not available

Note: Year ending 31st December.

From 2002 data are on accrual basis.

The tax revenues for Germany refer to the old Länder until 1990 and to all Germany beginning in 1991.

Heading 1000: In the years up to 2000, the revenues shown take into account the whole amount of non-wastable tax credits including that part paid out by the tax authorities which should, under the OECD criteria, be treated as expenditure. From 2001, the data necessary to make the adjustment have become available and the revenue figures comply with the OECD criteria from that year. The impact of this change is shown in Table D in Part I of this Report.

Heading for non-wastable tax credits against 1110 comprise child tax credits (paid out of wage tax revenue), tax credits for owner occupied housing (paid out of assessed income tax revenue) and investment tax credits for unincorporated businesses (for investment in former East Germany; paid out of assessed income tax revenue).

Heading for non-wastable tax credits against 1210 are investment tax credits for incorporated businesses (for investment in former East Germany; paid out of corporate income tax revenue).

.. Not available

Note: Year ending 31st December.

From 2002, data are on accrual basis.

Heading 5121: the aggregate figure for excise tax revenues is on a cash basis. Revenue from specific excises is in several cases reported on an accrual basis.

Tax base for "Environment petrol tax" is broader than petrol only.

Heading 5123: part of environmentally related payments is attributable to Local government. It is not possible to present a more detailed breakdown of these figures.

Note: The personal income tax data shown for the country table for Ireland is different to the ESA2010 presentation as the expenditure component of the payable tax credits are excluded in accordance with the OECD Interpretative Guide.

The data for years 1965 to 1973 are on fiscal year basis (commencing on 1st April) and are therefore not strictly comparable with the data for later years, which are on a calendar year basis.

From 1998, data are on accrual basis.

Heading 1200: Capital gains taxes paid by corporations are included in heading 1210.

Heading 2100: Includes contributions by self-employed and certain voluntary contributions.

Heading 2200: Since 1976 income tax paid by corporations and corporation profits tax have been replaced by corporation tax.

Heading 5111: Includes arrears of the wholesale and turnover taxes.

Tax receipts in 1988 were inflated by the success of the new arrangements for assessment and collection of tax. These arrangements included an amnesty for tax arrears paid by 30th September. This amnesty waived penalties and interest charge tax. It resulted in payments of 631 millions of euros spread across the main tax headings.

.. Not available

Note: The tax year ends in December 31th.

As from 2000, revenues data are computed on accrual basis.

As from 1997, revenues data are based on data provided to the European Union as for the Treaty of Maastricht excessive deficit procedure.

Section 6000: Regional Tax on Productive Activities (IRAP); it is a tax on the value of production therefore its taxable base is different from other groups tax bases.

Regarding the section "Taxes excluded National Accounts" the item "Others" includes: tax on the public areas utilization and tax on the collection and disposal of waste water.

.. Not available

Note: Data are on a fiscal year basis beginning 1st April.  
From 1990, data are on accrual basis.

The figures for different groups of taxes are reported on different reporting bases, namely: Social security contributions (heading 2000) : in principle accrual basis, Central government taxes : accrual basis (revenues accrued during the fiscal year plus cash receipts collected before the end of May (the end of April until 1977), Local government taxes : accrual basis (due to be paid during the fiscal year and cash receipts collected before the end of May).

The Japanese authorities take the view that the Enterprise tax (classified in 1100 and 1200) and the Mineral product tax (classified in 5121) should be classified in heading 6000 since under articles 72 and 519 of the Local Tax Law these taxes are regarded as levies on the business or mining activity itself.

Heading 2000 includes some unidentifiable voluntary contributions.

Heading 2300: Includes contributions to the National pension, National Health Insurance and the Farmer's pension fund. Contributions to the Farmer's pension fund are not available for the years before 1999.

Heading 4100: Municipal property tax, includes Prefectural property tax from 1990 to 1994 because data is not available to provide a breakdown.

Heading 5121: Municipal tobacco tax, includes Prefectural tobacco tax from 1990 to 1994 because data is not available to provide a breakdown.

Heading 5121: In sub-item Petroleum and coal tax, the data before 2003 refer to petroleum tax.

.. Not available

Note: Year ending 31st December.

Data are on cash basis.

Heading 2000: From 1997 the contributions to the three funds (civil servant pension fund, private school teachers pension fund and medical insurance fund) are classified as security social contributions. The reasons for the change are that the contributions either became mandatory or the fund started to be managed by public authorities in that year, thereby meeting the OECD definition of social security contributions.

Heading 2200: From 2007, this includes long-term care insurance.

Source: Ministry of Finance and Economy, Ministry of Home Affairs.

.. Not available

Note: The civil year ends December 31st.

From 1990 onwards, data are on an accrual basis.

Under the heading 2000, the difference between the total social security contributions and those collected by the social security parastatals corresponds to the levy for realignment of pensions operated on the remuneration and pensions of employees and former agents of P&T and BCEE; one of these establishments belonging to the "non-corporate and quasi-corporate sector" and the other to the "credit institutions sector".

.. Not available

Note: Year ending 31st December.

From 1999 data are on accrual basis.

Heading 2000: From 1998 the figures include some voluntary contributions and the breakdown between premiums paid by employees (2100) and by self-employed / non-employed has been estimated. This is also the case for the breakdown between premiums paid on a payroll or on an income tax basis for those years where both apply.

Heading 4100: From 1992, there was a structural break in the data for the 'municipal immovable property tax'. The tax ceased to be collected by the central government at that time and the figures are presented on a different type of statistical registration (no longer cash basis).

Heading 5110: Includes 358 millions of euros (1969) and 186 millions of euros (1970) in respect of deduction of turnover tax on stocks existing at 1st January 1969.

Heading 5213: Small amounts (less than 2.3 millions euros) of hunting and fishing licence receipts which should be classified here have been omitted.

Source: Social security contributions and local taxes: Central Bureau of Statistics.

Other taxes: Ministry of Finance.

.. Not available

Note: For the years before 1989 data are on a fiscal year basis ending 31st March. The figures provided for 1989 and onwards relate to the financial year ending 30th June of the following year.

From 1993, data are on accrual basis.

Heading 1000: Tax credits to exporters under the export incentives schemes are non-wastable, but that part of the excess of tax liability paid out to taxpayers is not identifiable.

Heading 1100: The figures up to 1969 include revenues collected by a social security income tax. The base of this tax was the same as the ordinary income tax base and the two have now been incorporated into a single income tax.

Heading 5121: From October 1986 incorporates that portion of the selective impost on wine, spirits, tobacco and motor vehicles which was formerly collected and reported as sales tax. The revenue collected on those imported goods which are subject to the equivalent of the domestic excise has been classified as excise duty. In this respect, there is a discontinuity between the excises recorded before and after October 1986.

Heading 5210: The other local authority licence fees include some small items which could be regarded as non-tax revenues.

Heading for non-wastable tax credits 1110 comprises four Family assistance tax credits. The total in item 1100 is net of the tax expenditure component but not net of the transfer component.

.. Not available

Note: Year ending 31st December.

From 2000, data are on accrual basis.

From 1981 the figures take into account the classification procedures set out in the OECD Interpretative Guide. Consequently they are not completely comparable with the figures for earlier years though the amounts involved are quite small.

Heading 1000: Includes a tax on property 'Contribucion Rustica' which would be more appropriately classified in 4110, and the 'Licencia fiscal industrial and profesionales' which, because it is a tax levied by reference to the size of the firm, energy input, etc, would be more appropriately classified in 6000. The data necessary to provide a breakdown is not available.

All subdivisions are estimated.

Heading 2300: Contributions paid by self-employed were shown under heading 2100 until 1982.

Heading 4100: Most of these receipts fall under 4110.

Heading 4400: In 1988 revenues from taxes on legal Acts issued by Autonomous Communities (Local) are included in 4400.

Heading 5121 comprises certain local levies which may include non-tax revenues.

Source: Informacion Estadística del Ministerio de Hacienda (for national taxes).

Cuentas de las Administraciones Publicas (for local taxes and social security) both published by Secretaria General Tecnica del Ministerio de Hacienda.

.. Not available

Note: Year ending 31st December.

From 2000 data are on accrual basis.

Figures prior to 1970 are not strictly comparable with those of later years, though the amounts involved are insignificant.

Heading 1000: Receipts are on accrual and not on a cash basis for all years.

Heading 2000 includes some voluntary contributions.

.. Not available

Note: Calendar year ending on 31 December.

The data is on an accrual basis.

The pre-1970 figures are not strictly comparable with those from the following years which were revised slightly.

"Parish taxes" are not reported in these statistics from 1985 onward.

In section 1100: payments made in consideration for exemption from military service could be classed under nontax receipts.

Section 2000 (Social security contributions) has been revised from 1985 onward to take account of the sectoring of government units adopted when switching to the ESA 95 system of accounts (currently ESA 2010). Consequently, health insurance contributions and those to the Swiss National Accident Insurance Fund are now excluded from section 2000.

Note: From 1982 the data are based on the fiscal year ending 31st December. Before that the data are on a fiscal year basis beginning 1st March. Revenue is reported on a cash basis except for social security contributions which are reported on an assessment basis.

The figures under the local tax collections include taxes under "Municipalities Revenues Law" and Property tax. They also include transfers to the local authorities from central budget tax revenues under the revenue sharing system.

Heading 2000: Before 2003, contributions to some private social security schemes are included in this heading.

Source: Bulletin of national accounts and the Budget revenue Bulletin.

.. Not available

Note: Year ending 31st December.

From 1990 data are on accrual basis.

Corporate income tax revenues for the United Kingdom are based on data provided in July; this was prior to revisions made to the historic Corporation tax data in September, so the revisions are not reflected here. For the latest UK Corporation tax data, please see [www.gov.uk/government/statistics/corporation-tax-statistics-2019](http://www.gov.uk/government/statistics/corporation-tax-statistics-2019) the main revisions are explained on page 13 of

[https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/833371/Aug19\\_Receipts\\_NS\\_Bulletin\\_Final\\_odt](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/833371/Aug19_Receipts_NS_Bulletin_Final_odt).

Heading 1210: The corporate tax figures include company income tax from 1990 onwards.

Heading 2000: Includes some voluntary contributions which cannot be separately identified.

Heading 6200: The community charge replaced domestic rates in Scotland in April 1989 and was extended to England and Wales in April 1990. This tax has been classified in heading 6200 as it is a lump-sum tax levied on each adult in a household (domestic rates are classified in heading 4100). Headings for non-wastable tax credits 1110 and 1210 are consistent with the guidelines, and the figures in the data are treated accordingly. The following method is adopted separately for Working Families 'Tax Credit and Disabled Persons Tax Credit' paid from 1999 to 2003. For each calendar, a random sample of awards over-lapping the quarter is taken. Each recipient family's income tax liability for the fiscal year within which the quarter falls is calculated, based on the earned income reported for the award (uprated to the middle of the overlap period). And the result multiplied by the number of days in the overlap period divided by 365. The tax expenditure component is defined as the minimum of this amount and the total amount of award paid in the overlap period. The total amount of award paid and the tax expenditure component are each summed over the sample cases, and the ratio is taken as the tax expenditure ration for the quarter. From 2003, the equivalent breakdown for Child and Working tax credits is based on household survey data. Survey data is used to estimate the breakdown into the tax expenditure and the transfer components for the other smaller tax credits.

Note: From 1990, data are on a year ending 31st December basis. For years up to and including 1976 the data covered fiscal years ending 30th June.

Between 1977 and 1989, Federal government data covered fiscal years ending 30th September and State & Local government data covered fiscal years ending 30th June.

From 1990, data are on accrual basis. There are no separate estimates for the State and Local capital gains tax revenues.

Heading 5121: In 1994 through 1996, some Federal excise taxes formerly shown separately were included in 'Other taxes, excises and undistributed, Federal government'.

Source: Federal estimates are derived from the US Budget, the Final Monthly Treasury Statement and the Annual Report of the US Treasury Department. The State and Local estimates are derived from Government Finances, published by the Bureau of the Census.

## 5.2. Memorandum tables

Table 5.37 shows different sources for financing social benefits, beyond compulsory social security contributions reported in section 5.1. In addition, this table shows also data on other taxes, on voluntary contributions to government and on compulsory contributions to private sector.

Table 5.38 shows social security contributions and payroll taxes paid by government. During the revision of the Interpretative Guide in 1984, the question arose of how to treat taxes paid by government. The two most prominent examples of such taxes are social security contributions and payroll taxes paid by government in respect of its employees. After a long discussion it was decided that the data shown in this publication should continue to include taxes paid by government (see §5 of the Interpretative Guide in annex A).

Whilst it was recognised that for certain purposes (e.g. to show the cash flow to the government sector from the private sector) it would be appropriate to eliminate taxes paid by one sector of government to another or tax payments between different units of the same sector of government, the view was taken that to record tax flows in the context of the economy as a whole required that taxes paid by government should be included in the data. This treatment ensures that the different resource flows of an economy, including the calculation of the output of government, are measured consistently in after-tax units. Nevertheless, it was decided that data on identifiable taxes paid by government should be separately identified in a memorandum item and this is the purpose of the country tables which follow.

The data that are reproduced in the following tables refer to actual compulsory payments made by general government in respect of their employees. Fictive, voluntary and imputed contributions are excluded from these data. The definitions of social security contributions, payroll taxes and general government are those set out in §35 to §41, §42 and §3 to §4 of the Interpretative Guide. Information on the other taxes paid by government (namely property taxes and consumption taxes) is not available in most countries, although it is believed that in all countries taxes based upon payroll are the most important taxes paid by government. In many cases, the data are estimates and are not always constructed on a basis consistent with that used in the main tables.

1. The multi-jurisdictional sector contains units where jurisdiction is shared between two or more governments, or classification of a unit to a jurisdiction is otherwise unclear. The main type of units currently falling into this category is public universities.

2. There is a break in the series in 1990. The data are based on ESA 2010 from that year onwards.

# **6** Tax revenues by subsectors of general government

---

Chapter 6 provides comparative information on tax revenues by subsectors of general government as well as summary information for each OECD country.

---

## 6.1. Comparative tables 1975, 1995, 2000 and 2017

This part of the Report presents comparative data on tax revenues by level of government. The tax data have been attributed to the sub-sectors of general government identified in section A.12 of the Interpretative Guide (see Annex A) and the attribution criteria used are those set out in that guide.

The column "supranational" reports the customs duties collected by the twenty-three EU member states on behalf of the European Union.

In this section, the averages for 2016 have been calculated excluding the one-off revenues from stability contributions in Iceland.

**Table 6.1. Tax revenues of sub-sectors of general government as % of total tax revenue (Federal/regional countries)**

.. Not available

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.

2. Spain is constitutionally a non-federal country but has a highly decentralised political structure.

1. Payments to the European Union are excluded from these comparisons.

2. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.

## 6.2. Country tables 1975, 1985, 1995, 2005 and 2017

This part of the Report presents detailed country information on tax revenues by level of government. The data have been attributed to the sub-sectors of general government identified in section A.12 of the Interpretative Guide (see Annex A) and the attribution criteria used are those set out in that guide.

1. From 1985, social security contributions are classified using the SNA definition of Social security Funds which means that a proportion of these payments are shown under the heading of Central Government. Prior to that year, all such payments were classified under the heading of Social Security.

## A.1 the OECD Classification of Taxes

1. **1000. Taxes on income, profits and capital gains**
  - 1100. Taxes on income, profits and capital gains of individuals
    - 1110. On income and profits
    - 1120. On capital gains
  - 1200. Corporate taxes on income, profits and capital gains
    - 1210. On income and profits
    - 1220. On capital gains
  - 1300. Unallocable as between 1100 and 1200
2. **2000. Social security contributions**
  - 2100. Employees
    - 2110. On a payroll basis
    - 2120. On an income tax basis
  - 2200. Employers
    - 2210. On a payroll basis
    - 2220. On an income tax basis
  - 2300. Self-employed or non-employed
    - 2310. On a payroll basis
    - 2320. On an income tax basis
  - 2400. Unallocable as between 2100, 2200 and 2300
    - 2410. On a payroll basis
    - 2420. On an income tax basis
3. **3000. Taxes on payroll and workforce**
4. **4000. Taxes on property**
  - 4100. Recurrent taxes on immovable property
    - 4110. Households
    - 4120. Other
  - 4200. Recurrent taxes on net wealth
    - 4210. Individual
    - 4220. Corporate
  - 4300. Estate, inheritance and gift taxes
    - 4310. Estate and inheritance taxes
    - 4320. Gift taxes

- 4400. Taxes on financial and capital transactions
- 4500. Other non-recurrent taxes on property
  - 4510. On net wealth
  - 4520. Other non-recurrent taxes
- 4600. Other recurrent taxes on property
- 5. **5000. Taxes on goods and services**
  - 5100. Taxes on production, sale, transfer, leasing and delivery of goods and rendering of services
    - 5110. General taxes
      - 5111. Value added taxes
      - 5112. Sales taxes
      - 5113. Turnover and other general taxes on goods and services
    - 5120. Taxes on specific goods and services
      - 5121. Excises
      - 5122. Profits of fiscal monopolies
      - 5123. Customs and import duties
      - 5124. Taxes on exports
      - 5125. Taxes on investment goods
      - 5126 . Taxes on specific services
      - 5127. Other taxes on international trade and transactions
      - 5128. Other taxes on specific goods and services
    - 5130. Unallocable as between 5110 and 5120
  - 5200. Taxes on use of goods, or on permission to use goods or perform activities
    - 5210. Recurrent taxes
      - 5211. Paid by households in respect of motor vehicles
      - 5212. Paid by others in respect of motor vehicles
      - 5213. Other recurrent taxes
    - 5220. Non-recurrent taxes
  - 5300. Unallocable as between 5100 and 5200
- 6. **6000. Other taxes**
  - 6100. Paid solely by business
  - 6200. Paid by other than business or unidentifiable

## A.2 Coverage

### General criteria

1. In the OECD classification the term “taxes” is confined to compulsory unrequited payments to general government. Taxes are unrequited in the sense that benefits provided by government to taxpayers are not normally in proportion to their payments.
2. The term “tax” does not include fines, penalties and compulsory loans paid to government. Borderline cases between tax and non-tax revenues in relation to certain fees and charges are discussed in §11–14.
3. General government consists of the central administration, agencies whose operations are under its effective control, state and local governments and their administrations, certain social security schemes and autonomous governmental entities, excluding public enterprises. This definition of government follows that of the 2008 *System of National Accounts* (SNA).<sup>1</sup> In that publication, the general government sector and its sub-sectors are defined in Chapter 4, paragraphs 4.117 to 4.165.
4. Extra-budgetary units are part of the general government system. These are general government entities with individual budgets that are not fully covered by the main or general budget. These entities operate under the authority or control of a central, state, or local government. Extra-budgetary entities may have their own revenue sources, which may be supplemented by grants (transfers) from the general budget or from other sources. Even though their budgets may be subject to approval by the legislature, similar to that of budgetary accounts, they have discretion over the volume and composition of their spending. Such entities may be established to carry out specific government functions, such as road construction, or the nonmarket production of health or education services. Budgetary arrangements vary widely across countries, and various terms are used to describe these entities, but they are often referred to as “extra-budgetary funds” or “decentralised agencies.”
5. Compulsory payments to supra-national bodies and their agencies are no longer included as taxes as from 1998, with some exceptions. However, custom duties collected by EU member states on behalf of the European Union are still identified as memorandum items and included in overall tax revenue amounts in the country tables (Chapter 5) of the country in which they are collected. (See §99). In countries where the church forms part of general government church taxes are included, provided they meet the criteria set out in §1 above. As the data refer to receipts of general government, levies paid to non-government bodies, welfare agencies or social insurance schemes outside general government, trade unions or trade associations, even where such levies are compulsory, are excluded. Compulsory payments to general government earmarked for such bodies are, however, included, provided that the government is not simply acting in an agency capacity.<sup>2</sup> Profits from fiscal monopolies are distinguished from those of other public enterprises and are treated as taxes because they reflect the exercise of the taxing power of the state by the use of monopoly powers (see §65–67), as are profits received by the government from the purchase and sale of foreign exchange at different rates (see §74).
6. Taxes paid by governments (e.g., social security contributions and payroll taxes paid by governments in their capacity as an employer, consumption taxes on their purchases or taxes on their property) are not excluded from the data provided. However, where it is possible to identify the amounts of revenue involved,<sup>3</sup> they are shown in Table 5.38 of this Report.
7. The relationship between this classification and that of the System of National Accounts (SNA) is set out in Sections A.9 and A.11 below. Because of the differences between the two classifications, the data shown in national accounts are sometimes calculated or classified differently from the practice set out in this guide. These and other differences are mentioned where appropriate (e.g., in §30 below) but it is not possible to refer to all of them. There may also be some differences between this classification and

that employed domestically by certain national administrations (e.g., see §12 below), so that OECD and national statistics data may not always be consistent: any such differences, however, are likely to be very slight in terms of amounts of revenues involved.

### ***Social security contributions***

8. Compulsory social security contributions, as defined in §39, and paid to general government, are treated here as tax revenues. Being compulsory payments to general government they clearly resemble taxes. They may, however, differ from other taxes in that the receipt of social security benefits depends, in most countries, upon appropriate contributions having been made, although the size of the benefits is not necessarily related to the amount of the contributions. Better comparability between countries is obtained by treating social security contributions as taxes, but they are listed under a separate heading so that they can be distinguished in any analysis.

9. The strict dividing line between tax revenues (compulsory unrequited payments to general government) and non-tax compulsory payments (NTCPs) (payments that are either required or made to other institutions) is clearly defined. However, within the range of different compulsory payments to governments existing across countries, it is not always straightforward in practice to decide whether specific payments are either taxes or NTCPs. For example, compulsory pension savings that are controlled by general government and that accumulate on an individual account earning a market return or a rate that compensates for inflation would at first sight be categorised as NTCPs as opposed to taxes. However, even these payments might still be ‘unrequited’ and therefore classify as taxes instead of NTCPs (for example if these pension savings are not paid out when the taxpayer dies before reaching the pension age and the funds are then used to provide a minimum pension to all taxpayers that are insured). These issues result in the social security revenue figures reported for most countries being based on the premise that all types of compulsory payments to general government are judged to some extent to have a redistributive element. It should be noted that this conclusion is based on a typically broad interpretation of the term ‘unrequited’ in the tax definition.

10. Social security contributions which are either voluntary or not payable to general government (see §1) are not treated as taxes, though in some countries, as indicated in the country footnotes, there are difficulties in completely eliminating voluntary contributions and certain compulsory payments to the private sector from the revenue figures. Imputed social security contributions are also not treated as taxes.

### ***Fees, user charges and licence fees***

11. Apart from vehicle licence fees, which are universally regarded as taxes, it is not easy to distinguish between those fees and user charges which are to be treated as taxes and those which are not, since, whilst a fee or charge is levied in connection with a specific service or activity, the strength of the link between the fee and the service provided may vary considerably, as may the relation between the amount of the fee and the cost of providing the service. Where the recipient of a service pays a fee clearly related to the cost of providing the service, the levy may be regarded as required and under the definition of §1 would not be considered as a tax. In the following cases, however, a levy could be considered as ‘unrequited’:

- a) where the charge greatly exceeds the cost of providing the service;
- b) where the payer of the levy is not the receiver of the benefit (e.g., a fee collected from slaughterhouses to finance a service which is provided to farmers);
- c) where government is not providing a specific service in return for the levy which it receives even though a licence may be issued to the payer (e.g., where the government grants a hunting, fishing or shooting licence which is not accompanied by the right to use a specific area of government land);

- d) where benefits are received only by those paying the levy but the benefits received by each individual are not necessarily in proportion to his payments (e.g., a milk marketing levy paid by dairy farmers and used to promote the consumption of milk).

12. In marginal cases, however, the application of the criteria set out in §1 can be particularly difficult. The solution adopted — given the desirability of international uniformity and the relatively small amounts of revenue usually involved — is to follow the predominant practice among tax administrations rather than to allow each country to adopt its own view as to whether such levies are regarded as taxes or as non-tax revenue.<sup>4</sup>

13. A list of the main fees and charges in question and their normal<sup>5</sup> treatment in this publication is as follows:

Non-tax revenues:	court fees; driving licence fees; harbour fees; passport fees; radio and television licence fees where public authorities provide the service
Taxes within heading 5200	permission to perform such activities as distributing films; hunting, fishing and shooting; providing entertainment or gambling facilities; selling alcohol or tobacco; permission to own dogs or to use or own motor vehicles or guns; severance taxes

14. In practice it may not always be possible to isolate tax receipts from non-tax revenue receipts when they are recorded together. If it is estimated that the bulk of the receipts derive from non-tax revenues, the whole amount involved is treated as a non-tax revenue; otherwise, such government receipts are included and classified according to the rules provided in §32 below.

### **Royalties**

15. The ownership of subsoil assets in the form of deposits of minerals or fossil fuels (coal, oil, or natural gas) depends upon the way in which property rights are defined by law and also on international agreements in the case of deposits below international waters. In some cases, either the ground below which the mineral deposits are located, the deposits themselves or both may belong to a local or central government unit.

16. In such cases, these general government units may grant leases to other institutional units that permit them to extract these deposits over a specified period of time in return for a payment or series of payments. These payments are often described as 'royalties' but they are essentially rent that accrues to owners of natural resources in return for putting these assets at the disposal of other units for specified periods of time. The rent may take the form of periodic payments of fixed amounts, irrespective of the rate of extraction, or, more commonly, they may be a function of the quantity, volume, or value of the asset extracted. Enterprises engaged in exploration on government land may make payments to general government units in exchange for the right to undertake test drilling or otherwise investigate the existence and location of subsoil assets. Such payments are also recorded as rents even though no extraction may take place. These payments are therefore classified as non-tax revenues.

17. The same principles apply when other institutional units are granted leases that permit them to fell timber in natural forests on land owned by general government units. These payments are also classified as non-tax revenues.

18. These rents or royalties paid to general government should not be confused with taxes on income and profits, severance taxes, business licenses, or other taxes. If the payments are levied on the profits from the extraction activity, then they should be classified as taxes on incomes, profits and gains (1000). In addition, any severance payments that are imposed on the extraction of minerals and fossil fuels from reserves owned privately or by another government should be classified as taxes. Payments related to the gross value of production should be classified as other taxes on goods and services (5128). Payments for

a license or permit to conduct extraction operations should be classified as taxes on use of goods and on permission to use goods or perform activities (5213).

### *Fines and penalties*

19. In principle, fines and penalties charged on overdue taxes or penalties imposed for the attempted evasion of taxes should not be recorded as tax revenues. However it may not be possible to separate payments of fines or other penalties from the revenues from the taxes to which they relate. In this case the fines and penalties relating to a particular tax are recorded together with the revenues from that tax and fines and penalties paid with revenue from unidentifiable taxes are classified as other taxes in Category 6000. Fines not relating to tax offences (e.g., for parking offences), or not identifiable as relating to tax offences, are also not treated as tax revenues.

## **A.3 Basis of reporting**

### *Accrual reporting*

20. The data reported in this publication for recent years are predominantly recorded on an accrual basis, i.e. recorded at the time that the tax liability was created. Further information is provided in the footnotes to the country table in Chapter 5 of the Report.

21. However, data for earlier years are still predominantly recorded on a cash basis, i.e. at the time at which the payment was received by government. Thus, for example, taxes withheld by employers in one year but paid to the government in the following year and taxes due in one year but actually paid in the following year are both included in the receipts of the second year. Corrective transactions, such as refunds, repayments and drawbacks, are deducted from gross revenues of the period in which they are made.

22. Data on tax revenues are recorded without offsets for the administrative expenses connected with tax collection. Similarly, where the proceeds of tax are used to subsidise particular members of the community, the subsidy is not deducted from the yield of the tax, though the tax may be shown net of subsidies in the national records of some countries.

23. As regards fiscal monopolies (heading 5122), only the amount actually transferred to the government is included in government revenues. However, if any expenditures of fiscal monopolies are considered to be government expenditures (e.g., social expenditures undertaken by fiscal monopolies at the direction of the government) they are added back for the purpose of arriving at tax revenue figures (see §65 below).

### *The distinction between tax and expenditure provisions*

24. Because this publication is concerned only with the revenue side of government operations, no account being taken of the expenditure side, a distinction has to be made between tax and expenditure provisions. Normally there is no difficulty in making this distinction as expenditures are made outside the tax system and the tax accounts and under legislation separate from the tax legislation. In borderline cases, cash flow is used to distinguish between tax provisions and expenditure provisions. Insofar as a provision affects the flow of tax payments from the taxpayer to the government, it is regarded as a tax provision and is taken into account in the data shown in this publication. A provision which does not affect this flow is seen as an expenditure provision and is disregarded in the data recorded in this publication.<sup>6</sup>

25. Tax allowances, exemptions and deductions against the tax base clearly affect the amount of tax paid to the government and are therefore considered as tax provisions. At the other extreme, those subsidies which cannot be offset against tax liability and which are clearly not connected with the

assessment process, do not reduce tax revenues as recorded in this publication. Tax credits are amounts deductible from tax payable (as distinct from deductions from the tax base). Two types of tax credits are distinguished, those (referred to here as wastable tax credits) which are limited to the amount of the tax liability and therefore cannot give rise to a payment by the authorities to the taxpayer, and those (referred to as non-wastable tax credits) which are not so limited, so that the excess of the credit over the tax liability can be paid to the taxpayer.<sup>7</sup> A wastable tax credit, like a tax allowance, clearly affects the amount of tax paid to the government, and is therefore considered as a tax provision. The practice followed for non-wastable tax credits<sup>8</sup> is to distinguish between the ‘tax expenditure component’,<sup>9</sup> which is that portion of the credit that is used to reduce or eliminate a taxpayer’s liability, and the ‘transfer component’, which is the portion that exceeds the taxpayer’s liability and is paid to that taxpayer. Reported tax revenues should be reduced by the amount of the tax expenditure component but not by the amount of the transfer component. In addition, the amounts of the tax expenditure and transfer components should be reported as memorandum items in the country tables. Countries that are unable to distinguish between the tax expenditure and transfer components should indicate whether or not the tax revenues have been reduced by the total of these components, and provide any available estimates of the amounts of the two components. Further information is given in Chapter 1 of the Report, which illustrates the effect of alternative treatments of non-wastable tax credits on tax to GDP.

### *Calendar and fiscal years*

26. National authorities whose fiscal years do not correspond to the calendar year show data, where possible, on a calendar year basis to permit maximum comparability with the data of other countries. There remain a few countries where data refer to fiscal years. For these the GDP data used in the comparative tables also correspond to the fiscal years.

## **A.4 General classification criteria**

### *The main classification criteria*

27. The classification of receipts among the main headings (1000, 2000, 3000, 4000, 5000 and 6000) is generally governed by the base on which the tax is levied: 1000 income, profits and capital gains; 2000 and 3000 earnings, payroll or number of employees; 4000 property; 5000 goods and services; 6000 multiple bases, other bases or unidentifiable bases. Where a tax is calculated on more than one base, the receipts are, where possible, split among the various headings (see §32 and §81). The headings 4000 and 5000 cover not only taxes where the tax base is the property, goods or services themselves but also certain related taxes. Thus, taxes on the transfer of property are included in 4400<sup>10</sup> and taxes on the use of goods or on permission to perform activities in 5200. In headings 4000 and 5000 a distinction is made in certain sub-headings between recurrent and non-recurrent taxes: recurrent taxes are defined as those levied at regular intervals (usually annually) and non-recurrent taxes are levied once and for all (see also §47 to §50, §53, §54 and §79 for particular applications of this distinction).

28. Earmarking of a tax for specific purposes does not affect the classification of tax receipts. However, as explained in §39 on the classification of social security contributions, the conferment of an entitlement to social benefits is crucial to the definition of the 2000 main heading.

29. The way that a tax is levied or collected (e.g., by use of stamps) does not affect classification.

### *Classification of taxpayers*

30. In certain sub-headings distinctions are made between different categories of taxpayers. These distinctions vary from tax to tax:

a) *Between individuals and corporations in relation to income and net wealth taxes*

The basic distinction is that corporation income taxes, as distinct from individual income taxes, are levied on the corporation as an entity, not on the individuals who own it, and without regard to the personal circumstances of these individuals. The same distinction applies to net wealth taxes on corporations and those on individuals. Taxes paid on the profits of partnerships and the income of institutions, such as life insurance or pension funds, are classified according to the same rule. They are classified as corporate taxes (1200) if they are charged on the partnership or institution as an entity without regard to the personal circumstances of the owners. Otherwise, they are treated as individual taxes (1100). Usually, there is different legislation for the corporation taxes and for the individual taxes.<sup>11</sup> The distinction made here between individuals and corporations does not follow the sector classification between households, enterprises, and so on of the System of National Accounts for income and outlay accounts. The SNA classification requires certain unincorporated businesses<sup>12</sup> to be excluded from the household sector and included with non-financial enterprises and financial institutions. The tax on the profits of these businesses, however, cannot always be separated from the tax on the other income of their owners, or can be separated only on an arbitrary basis. No attempt at this separation is made here and the whole of the individual income tax is shown together without regard to the nature of the income chargeable.

b) *Between households and others in relation to taxes on immovable property*

Here the distinction is that adopted by the SNA for the production and consumption expenditure accounts. The distinction is between households as consumers (i.e. excluding non-incorporated business) on the one hand and producers on the other hand. However, taxes on dwellings occupied by households, whether paid by owner-occupiers, tenants or landlords, are classified under households. This follows the common distinction made between taxes on domestic property versus taxes on business property. Some countries are not, however, in a position to make this distinction.

c) *Between households and others in relation to motor vehicle licences*

Here the distinction is between households as consumers on the one hand and producers on the other, as in the production and consumption expenditure accounts of the SNA.

d) *Between business and others in relation to the residual taxes (6000)*

The distinction is the same as in c) above between producers on the one hand and households as consumers on the other hand. Taxes which are included under the heading 6000 because they involve more than one tax base or because the tax base does not fall within any of the previous categories but which are identifiable as levyable only on producers and not on households are included under 'business'. The rest of the taxes which are included under the heading 6000 are shown as 'other' or non-identified.

## **Surcharges**

31. Receipts from surcharges in respect of particular taxes are usually classified with the receipts from the relevant tax whether or not the surcharge is temporary. If, however, the surcharge has a characteristic which would render it classifiable in a different heading of the OECD list, receipts from the surcharge are classified under that heading separately from the relevant tax.

## **Unidentifiable tax receipts and residual sub-headings**

32. A number of cases arise where taxes cannot be identified as belonging entirely to a heading or sub-heading of the OECD classification and the following practices are applied in such cases:

- a) The heading is known, but it is not known how receipts should be allocated between sub-headings: receipts are classified in the appropriate residual sub-heading (1300, 2400, 4520, 4600, 5130, 5300 or 6200).

- b) It is known that the bulk of receipts from a group of taxes (usually local taxes) is derived from taxes within a particular heading or sub-heading, but some of the taxes in the group whose amount cannot be precisely ascertained may be classifiable in other headings or sub-headings: receipts are shown in the heading or sub-heading under which most of the receipts fall.
- c) Neither the heading nor sub-heading of a tax (usually local) can be identified: the tax is classified in 6200 unless it is known that it is a tax on business in which case it is classified in 6100.

## A.5 Commentaries on items of the list

### *1000 — Taxes on income, profits and capital gains*

33. This heading covers taxes levied on the net income or profits (i.e. gross income minus allowable tax reliefs) of individuals and enterprises. Also covered are taxes levied on the capital gains of individuals and enterprises, and gains from gambling.

34. Included in the heading are:

- a) taxes levied predominantly on income or profits, though partially on other bases. Taxes on various bases which are not predominantly income or profits are classified according to the principles laid down in §32 and §81;
- b) taxes on property, which are levied on a presumed or estimated income as part of an income tax (see also §47(a), (c) and (d));
- c) compulsory payments to social security fund contributions that are levied on income but do not confer an entitlement to social benefits. When such contributions do confer an entitlement to social benefits, they are included in heading 2000 (see §39);
- d) receipts from integrated scheduler income tax systems are classified as a whole in this heading, even though certain of the scheduler taxes may be based upon gross income and may not take into account the personal circumstances of the taxpayer.

35. The main subdivision of this heading is between levies on individuals (1100) and those on corporate enterprises (1200). Under each subdivision a distinction is made between taxes on income and profits (1110 and 1210), and taxes on capital gains (1120 and 1220). If certain receipts cannot be identified as appropriate to either 1100 or 1200, or if in practice this distinction cannot be made (e.g., because there are no reliable data on the recipients of payments from which withholding taxes are deducted) they are classified in 1300 as not-allocable.

### *Treatment of credits under imputation systems*

36. Under imputation systems of corporate income tax, a company's shareholders are wholly or partly relieved of their liability to income tax on dividends paid by the company out of income or profits liable to corporate income tax. In countries with such systems,<sup>13</sup> part of the tax on the company's profits is available to provide relief against the shareholders' own tax liability. The relief to the shareholder takes the form of a tax credit, the amount of which may be less than, equal to, or more than the shareholder's overall tax liability. If the tax credit exceeds this tax liability the excess may be payable to the shareholder. As this type of tax credit is an integral part of the imputation system of corporate income tax, any payment to the shareholders is treated as a repayment of tax and not as expenditure (compare the treatment of other tax credits described in §25).

37. As the tax credit under imputation systems (even when exceeding tax liability) is to be regarded as a tax provision, the question arises whether it should be deducted from individual income tax receipts (1110) or corporate income tax receipts (1210). In this Report, the full amount of corporate income tax paid is shown under 1210 and no imputed tax is included under 1110. Thus, the full amount of the credit reduces the amount of 1110 whether the credit results in a reduction of personal income tax liability or whether an actual refund is made because the credit exceeds the income tax liability. (Where, however, such tax credits are deducted from corporation tax in respect of dividends paid to corporations the amounts are deducted from the receipts of 1210).

### **1120 and 1220 — Taxes on capital gains**

38. These sub-headings comprise taxes imposed on capital gains, 1120 covering those levied on the gains of individuals and 1220 those levied on the gains of corporate enterprises, where receipts from such taxes can be separately identified. In many countries this is not the case and the receipts from such taxes are then classified with those from the income tax. Heading 1120 also includes taxes on gains from gambling.

### **2000 — Social security contributions**

39. Classified here are all compulsory payments that confer an entitlement to receive a (contingent) future social benefit. Such payments are usually earmarked to finance social benefits and are often paid to institutions of general government that provide such benefits. However, such earmarking is not part of the definition of social security contributions and is not required for a tax to be classified here. However, conferment of an entitlement is required for a tax to be classified under this heading. So, levies on income or payroll that are earmarked for social security funds but do not confer an entitlement to benefit are excluded from this heading and shown under personal income taxes (1100) or taxes on payroll and workforce (3000). Taxes on other bases, such as goods and services, which are earmarked for social security benefits are not shown here but are classified according to their respective bases because they generally confer no entitlement to social security benefits.

40. Contributions for the following types of social security benefits would, *inter alia*, be included: unemployment insurance benefits and supplements, accident, injury and sickness benefits, old-age, disability and survivors' pensions, family allowances, reimbursements for medical and hospital expenses or provision of hospital or medical services. Contributions may be levied on both employees and employers.

41. Contributions may be based on earnings or payroll ('on a payroll basis') or on net income after deductions and exemptions for personal circumstances ('on an income tax basis'), and the revenues from the two bases should be separately identified if possible. However, where contributions to a general social security scheme are on a payroll basis, but the contributions of particular groups (such as the self-employed) cannot be assessed on this basis and net income is used as a proxy for gross earnings, the receipts may still be classified as being on a payroll basis. In principle, this heading excludes voluntary contributions paid to social security schemes. When separately identifiable these are shown in the memorandum item on the financing of social security benefits. In practice, however, they cannot always be separately identified from compulsory contributions, in which case they are included in this heading.

42. Contributions to social insurance schemes which are not institutions of general government and to other types of insurance schemes, provident funds, pension funds, friendly societies or other saving schemes are not considered as social security contributions. Provident funds are arrangements under which the contributions of each employee and of the corresponding employer on his/her behalf are kept in a separate account earning interest and withdrawable under specific circumstances. Pension funds are separately organised schemes negotiated between employees and employers and carry provisions for

different contributions and benefits, sometimes more directly tied to salary levels and length of service than under social security schemes. When contributions to these schemes are compulsory or quasi-compulsory (e.g., by virtue of agreement with professional and union organisations) they are shown in the memorandum item (refer to Table 5.37 of the Report).

43. Contributions by government employees and by governments in respect of their employees, to social security schemes classified within general government are included in this heading. Contributions to separate schemes for government employees, which can be regarded as replacing general social security schemes, are also regarded as taxes.<sup>14</sup> Where, however, a separate scheme is not seen as replacing a general scheme and has been negotiated between the government, in its role as an employer, and its employees, it is not regarded as social security and contributions to it are not regarded as taxes, even though the scheme may have been established by legislation.

44. This heading excludes 'imputed' contributions, which correspond to social benefits paid directly by employers to their employees or former employees or to their representatives (e.g., when employers are legally obliged to pay sickness benefits for a certain period).

45. Contributions are divided into those of employees (2100), employers (2200), and self-employed or non-employed (2300), and then further sub-divided according to the basis on which they are levied. Employees are defined for this purpose as all persons engaged in activities of business units, government bodies, private non-profit institutions, or other paid employment, except the proprietors and their unpaid family members in the case of unincorporated businesses. Members of the armed forces are included, irrespective of the duration and type of their service, if they contribute to social security schemes. The contributions of employers are defined as their payments on account of their employees to social security schemes. Where employees or employers are required to continue the payment of social security contributions when the employee becomes unemployed these contributions, data permitting, are shown in 2100 and 2200 respectively. Accordingly, the sub-heading 2300 is confined to contributions paid by the self-employed and by those outside of the labour force (e.g., disabled or retired individuals).

### **3000 — Taxes on payroll and workforce**

46. These consist of taxes payable by enterprises assessed either as a proportion of the wages or salaries paid or as a fixed amount per person employed. They do not include compulsory social security contributions paid by employers or any taxes paid by employees themselves out of their wages or salaries

### **4000 — Taxes on property**

47. This heading covers recurrent and non-recurrent taxes on the use, ownership or transfer of property. These include taxes on immovable property or net wealth, taxes on the change of ownership of property through inheritance or gift and taxes on financial and capital transactions. The following kinds of tax are excluded from this heading:

- a) taxes on capital gains resulting from the sale of a property (1120 or 1220);
- b) taxes on the use of goods or on permission to use goods or perform activities (5200); see §76;
- c) taxes on immovable property levied on the basis of a presumed net income which take into account the personal circumstances of the taxpayer. They are classified as income taxes along with taxes on income and capital gains derived from property (1100);
- d) taxes on the use of property for residence, where the tax is payable by either proprietor or tenant and the amount payable is a function of the user's personal circumstances (pay, dependants, and so on). They are classified as taxes on income (1100);

- e) taxes on building in excess of permitted maximum density, taxes on the enlargement, construction or alteration of certain buildings beyond a permitted value and taxes on building construction. They are classified as taxes on permission to perform activities (5200);
- f) taxes on the use of one's own property for special trading purposes like selling alcohol, tobacco, meat or for exploitation of land resources (e.g., United States severance taxes). They are classified as taxes on permission to perform activities (5200).

#### **4100 — Recurrent taxes on immovable property**

48. This sub-heading covers taxes levied regularly in respect of the use or ownership of immovable property.

- these taxes are levied on land and buildings;
- they can be in the form of a percentage of an assessed property value based on a national rental income, sales price, or capitalised yield; or in terms of other characteristics of real property, ( for example size or location ) from which a presumed rent or capital value can be derived.
- such taxes can be levied on proprietors, tenants, or both. They can also be paid by one level of government to another level of government in respect of property under the jurisdiction of the latter.
- debts are not taken into account in the assessment of these taxes, and they differ from taxes on net wealth in this respect.

49. Taxes on immovable property are further sub-divided into those paid by households (4110) and those paid by other entities (4120), according to the criteria set out in §30(b) above.

#### **4200 — Recurrent taxes on net wealth**

50. This sub-heading covers taxes levied regularly (in most cases annually) on net wealth, i.e. taxes on a wide range of movable and immovable property, net of debt. It is sub-divided into taxes paid by individuals (4210) and taxes paid by corporate enterprises (4220) according to the criteria set out in §30(a) above. If separate figures exist for receipts paid by institutions, the tax payments involved are added to those paid by corporations.

#### **4300 — Estate, inheritance and gift taxes**

51. This sub-heading is divided into taxes on estates and inheritances (4310) and taxes on gifts (4320).<sup>15</sup> Estate taxes are charged on the amount of the total estate whereas inheritance taxes are charged on the shares of the individual recipients; in addition the latter may take into account the relationship of the individual recipients to the deceased.

#### **4400 — Taxes on financial and capital transactions**

52. This sub-heading comprises, *inter alia*, taxes on the issue, transfer, purchase and sale of securities, taxes on cheques, and taxes levied on specific legal transactions such as validation of contracts and the sale of immovable property. The heading does not include:

- a) taxes on the use of goods or property or permission to perform certain activities (5200);
- b) fees paid to cover court charges, charges for birth, marriage or death certificates, which are normally regarded as non-tax revenues (see §11);
- c) taxes on capital gains (1000);
- d) recurrent taxes on immovable property (4100);
- e) recurrent taxes on net wealth (4200);

- f) once-and-for-all levies on property or wealth (4500).

#### **4500 — Other non-recurrent taxes on property<sup>16</sup>**

53. This sub-heading covers once-and-for-all, as distinct from recurrent, levies on property. It is divided into taxes on net wealth (4510) and other non-recurrent taxes on property (4520). Heading 4510 would include taxes levied to meet emergency expenditures, or for redistribution purposes. Heading 4520 would cover taxes levied to take account of increases in land value due to permission given to develop or provision of additional local facilities by general government, any taxes on the revaluation of capital and once-and-for-all taxes on particular items of property.

#### **4600 — Other recurrent taxes on property**

54. These rarely exist in OECD member countries, but the heading would include taxes on goods such as cattle, jewellery, windows, and other external signs of wealth.

#### **5000 — Taxes on goods and services**

55. All taxes and duties levied on the production, extraction, sale, transfer, leasing or delivery of goods, and the rendering of services (5100), or in respect of the use of goods or permission to use goods or to perform activities (5200) are included here. The heading thus covers:

- a) multi-stage cumulative taxes;
- b) general sales taxes — whether levied at manufacture/production, wholesale or retail level;
- c) value-added taxes;
- d) excises;
- e) taxes levied on the import and export of goods;
- f) taxes levied in respect of the use of goods and taxes on permission to use goods, or perform certain activities;
- g) taxes on the extraction, processing or production of minerals and other products.

56. Borderline cases between this heading and heading 4000 (taxes on property) and 6100 (other taxes on business) are referred to in §47, §52 and §78. Residual sub-headings (5300) and (5130) cover tax receipts which cannot be allocated between 5100 and 5200 and between 5110 and 5120, respectively; see §32.

#### **5100 — Taxes on the production, sale, transfer, leasing and delivery of goods and rendering of services**

57. This sub-heading consists of all taxes, levied on transactions in goods and services on the basis of their intrinsic characteristics (e.g., value, weight of tobacco, strength of alcohol, and so on) as distinct from taxes imposed on the use of goods, or permission to use goods or perform activities, which fall under 5200.

#### **5110 — General taxes on goods and services**

58. This sub-heading includes all taxes, other than import and export duties (5123 and 5124), levied on the production, leasing, transfer, delivery or sales of a wide range of goods and/or the rendering of a wide range of services, irrespective of whether they are domestically produced or imported and irrespective of the stage of production or distribution at which they are levied. It thus covers value-added taxes, sales taxes and multi-stage cumulative taxes. Receipts from border adjustments in respect of such taxes when

goods are imported are added to gross receipts for this category, and repayments of such taxes when goods are exported are deducted. These taxes are subdivided into 5111 value-added taxes, 5112 sales taxes, 5113 turnover and other general taxes on goods and services.

59. Borderline cases arise between this heading and taxes on specific goods (5120) when taxes are levied on a large number of goods, for example, the United Kingdom purchase tax (repealed in 1973) and the Japanese commodity tax (repealed in 1988). In conformity with national views, the former United Kingdom purchase tax is classified as a general tax (5112) and the former Japanese commodity tax as excises (5121).

### **5111 — Value-added taxes**

60. All general consumption taxes charged on value-added are classified in this sub-heading, irrespective of the method of deduction and the stages at which the taxes are levied. In practice, all OECD countries with value-added taxes normally allow immediate deduction of taxes on purchases by all but the final consumer and impose tax at all stages. In some countries the heading may include certain taxes, such as those on financial and insurance activities, either because receipts from them cannot be identified separately from those from the value-added tax, or because they are regarded as an integral part of the value-added tax, even though similar taxes in other countries might be classified elsewhere (e.g., 5126 as taxes on services or 4400 as taxes on financial and capital transactions).

### **5112 — Sales taxes**

61. All general taxes levied at one stage only, whether at manufacturing or production, wholesale or retail stage are classified here.

### **5113 — Turnover and other general taxes on goods and services**

62. These are multi-stage cumulative taxes and taxes where elements of consumption taxes are combined with multistage taxes. These taxes are levied each time a transaction takes place without deduction for taxes paid on inputs. Multi-stage taxes can be combined with elements of value-added or sales taxes.

### **5120 — Taxes on specific goods and services**

63. Excises, profits generated and transferred from fiscal monopolies, and customs and imports duties as well as taxes on exports, foreign exchange transactions, investment goods and betting stakes and special taxes on services, which do not form part of a general tax of 5110, are included in this category.

### **5121 — Excises**

64. Excises are taxes levied as a product specific unit tax on a predefined limited range of goods. Excises are usually levied at differentiated rates on nonessential or luxury goods, alcoholic beverages, tobacco, and energy. Excises may be imposed at any stage of production or distribution and are usually assessed as a specific charge per unit based on characteristics by reference to the value, weight, strength, or quantity of the product. Included are special taxes on individual products such as sugar, sugar beets, matches, and chocolates; taxes levied at varying rates on a certain range of goods; and taxes levied on tobacco goods, alcoholic drinks, motor fuels, and hydrocarbon oils. If a tax collected principally on imported goods also applies, or would apply, under the same law to comparable domestically produced goods, then the revenue from this tax is classified as arising from excises rather than from import duties. This principle applies even if there is no comparable domestic production or no possibility of such production. Taxes on the use of utilities such as water, electricity, gas, and energy are regarded as excises rather than taxes on

specific services (5126). Excises exclude those taxes that are levied as general taxes on goods and services (5110); profits of fiscal monopolies (5122); customs and other import duties (5123); or taxes on exports (5124).

### **5122 — Profits of fiscal monopolies**

65. This sub-heading covers that part of the profits of fiscal monopolies which is transferred to general government or which is used to finance any expenditures considered to be government expenditures (see §23). Amounts are shown when they are transferred to general government or used to make expenditures considered to be government expenditures.

66. Fiscal monopolies reflect the exercise of the taxing power of government by the use of monopoly powers. Fiscal monopolies are non-financial public enterprises exercising a monopoly in most cases over the production or distribution of tobacco, alcoholic beverages, salt, matches, playing cards and petroleum or agricultural products (i.e. on the kind of products which are likely to be, alternatively or additionally, subject to the excises of 5121), to raise the government revenues which in other countries are gathered through taxes on dealings in such commodities by private business units. The government monopoly may be at the production stage or, as in the case of government-owned and controlled liquor stores, at the distribution stage.

67. Fiscal monopolies are distinguished from public utilities such as rail transport, electricity, post offices, and other communications, which may enjoy a monopoly or quasi-monopoly position but where the primary purpose is normally to provide basic services rather than to raise revenue for government. Transfers from such other public enterprises to the government are considered as non-tax revenues. The traditional concept of fiscal monopoly is not generally extended to include state lotteries, the profits of which are usually accordingly regarded as non-tax revenues. However, they can be included as tax revenues if the prime reason for their operation is to raise revenues to finance government expenditure. Fiscal monopoly profits are distinguished from export and import monopoly profits (5127) transferred from marketing boards or other enterprises dealing with international trade.

### **5123 — Customs and other import duties**

68. Taxes, stamp duties and surcharges restricted by law to imported products are included here. Also included are levies on imported agricultural products which are imposed in member countries of the European Union and amounts paid by certain of these countries under the Monetary Compensation Accounts (MCA) system.<sup>16</sup> Starting from 1998, customs duties collected by European Union member states on behalf of the European Union are no longer reported under this heading in the country tables (in Chapter 5 of the Report). Excluded here are taxes collected on imports as part of a general tax on goods and services, or an excise applicable to both imported and domestically produced goods.

### **5124 — Taxes on exports**

69. In the 1970s, export duties were levied in Australia, Canada and Portugal as a regular measure and they have been used in Finland for counter-cyclical purposes. Some member countries of the European Union pay, as part of the MCA system, a levy on exports (see note 16 to §68). Where these amounts are identifiable, they are shown in this heading. This heading does not include repayments of general consumption taxes or excises or customs duties on exported goods, which should be deducted from the gross receipts under 5110, 5121 or 5123, as appropriate.

**5125 — Taxes on investment goods**

70. This sub-heading covers taxes on investment goods, such as machinery. These taxes may be imposed for a number of years or temporarily for counter-cyclical purposes. Taxes on industrial inputs which are also levied on consumers [e.g., the Swedish energy tax which is classified under (5121)] are not included here.

**5126 — Taxes on specific services**

71. All taxes assessed on the payment for specific services, such as taxes on insurance premiums, banking services, gambling and betting stakes (e.g., from horse races, football pools, lottery tickets), transport, entertainment, restaurant and advertising charges, fall into this category. Taxes levied on the gross income of companies providing the service (e.g., gross insurance premiums or gambling stakes received by the company) are also classified under this heading. Tax revenues from bank levies and payments to deposit insurance and financial stability schemes are provisionally included here for the 2012 edition. The detailed classification is set out in §108.

72. Excluded from this sub-heading are:

- a) taxes on services forming part of a general tax on goods and services (5110);
- b) taxes on electricity, gas and energy (5121 as excises);
- c) taxes on individual gains from gambling (1120 as taxes on capital gains of individuals and non-corporate enterprises) and lump-sum taxes on the transfer of private lotteries or on the permission to set up lotteries (5200);<sup>17</sup>
- d) taxes on cheques and on the issue, transfer or redemption of securities (4400 as taxes on financial and capital transactions).

**5127 — Other taxes on international trade and transactions**

73. This sub-heading covers revenue received by the government from the purchase and sale of foreign exchange at different rates. When the government exercises monopoly powers to extract a margin between the purchase and sales price of foreign exchange, other than to cover administrative costs, the revenue derived constitutes a compulsory levy exacted in indeterminate proportions from both purchaser and seller of foreign exchange. It is the common equivalent of an import duty and export duty levied in a single exchange rate system or of a tax on the sale or purchase of foreign exchange. Like the profits of fiscal monopolies and import or export monopolies transferred to government, it represents the exercise of monopoly powers for tax purposes and is included in tax revenues.

74. The sub-heading covers also the profits of export or import monopolies, which do not however exist in OECD countries, taxes on purchase or sale of foreign exchange, and any other taxes levied specifically on international trade or transactions.

**5128 — Other taxes on specific goods and services**

75. This item includes taxes on the extraction of minerals, fossil fuels and other exhaustible resources from deposits owned privately or by another government together with any other unidentifiable receipts from taxes on specific goods and services. Taxes on the extraction of exhaustible resources are usually a fixed amount per unit of quality or weight, but can be a percentage of value. The taxes are recorded when the resources are extracted. Payments from the extraction of exhaustible resources from deposits owned by the government unit receiving the payment are classified as rent.

### ***5200 — Taxes on use of goods or on permission to use goods or perform activities***

76. This sub-heading covers taxes which are levied in respect of the use of goods as distinct from taxes on the goods themselves. Unlike the latter taxes – reported under 5100 –, they are not assessed on the value of the goods but usually as fixed amounts. Taxes on permission to use goods or to perform activities are also included here, as are pollution taxes not based upon the value of particular goods. It is sometimes difficult to distinguish between compulsory user charges and licence fees which are regarded as taxes and those which are excluded as non-tax revenues. The criteria which are employed are noted in §11–12.

77. Although the sub-heading refers to the ‘use’ of goods, registration of ownership rather than use may be what generates liability to tax, so that the taxes of this heading may apply to the ownership of animals or goods rather than their use (e.g., race horses, dogs and motor vehicles) and may apply even to unusable goods (e.g., unusable motor vehicles or guns).

78. Borderline cases arise with:

- a) taxes on the permission to perform business activities which are levied on a combined income, payroll or turnover base and, accordingly, are classified following the rules in §81;
- b) taxes on the ownership or use of property of headings 4100, 4200 and 4600. The heading 4100 is confined to taxes on the ownership or tenancy of immovable property and – unlike the taxes of 5200 – they are related to the value of the property. The net wealth taxes and taxes on chattels of 4200 and 4600 respectively are confined to the ownership rather than the use of assets, apply to groups of assets rather than particular goods and again are related to the value of the assets,

### ***5210 — Recurrent taxes on use of goods and on permission to use goods or perform activities***

79. The principal characteristic of taxes classified here is that they are levied at regular intervals and that they are usually fixed amounts. The most important item in terms of revenue receipts is vehicle licence taxes. This sub-heading also covers taxes on permission to hunt, shoot, fish or to sell certain products and taxes on the ownership of dogs and on the performance of certain services, provided that they meet the criteria set out in §11–12. The sub-divisions of 5210 are user taxes on motor vehicles paid by households (5211) and those paid by others (5212). Sub-heading 5213 covers dog licences and user charges for permission to perform activities such as selling meat or liquor when the levies are on a recurring basis. It also covers recurrent general licences for hunting, shooting and fishing where the right to carry out these activities is not granted as part of a normal commercial transaction (e.g., the granting of the licence is not accompanied by the right to use a specific area which is owned by government).

### ***5220 — Non-recurrent taxes on use of goods and on permission to use goods or perform activities***

80. This section covers non-recurrent taxes levied on the use of goods or on permission to use goods or perform activities and taxes levied each time goods are used. It includes taxes levied on the emission or discharge into the environment of noxious gases, liquids or other harmful substances.

- Payments for tradable emission permits issued by governments under cap and trade schemes should be recorded here at the time the emissions occur. No revenue should be recorded for permits that governments issue free of charge. The accrual basis of recording means that there can be a timing difference between the cash being received by government for the permits and the time the emission occurs. In the national accounts, this timing gives rise to a financial liability for government during the period.

- Payments made for the collection and disposal of waste or noxious substances by public authorities should be excluded as they constitute a sale of services to enterprises.

81. Other taxes falling under heading 5200 that are not levied recurrently are also included here. Thus, once-and-for-all payments for permission to sell liquor or tobacco or to set up betting shops are included provided they meet the criteria set out in §11–12.

### **6000 — Other taxes**

82. Taxes levied on a base, or bases, other than those described under headings 1000, 3000, 4000 and 5000, or on bases of which cannot be considered to be related to any one of these headings, are included here. Where taxes are levied on a multiple base and it is possible to estimate the receipts related to each base the separate amounts are included under the appropriate headings. If separate amounts cannot be estimated and it is known that most of the receipts are derived from one base, the whole of the receipts are classified according to that base. Otherwise, they are classified here. Other revenues included here are presumptive taxes not included elsewhere in the classification system, taxes on individuals in the form of a poll tax or capitation tax, stamp taxes not related to financial and capital transactions nor falling exclusively on a single category of transaction, expenditure taxes where personal deductions or exemptions are applied and unidentifiable tax receipts. A subdivision is made between taxes levied wholly or predominantly on business (6100) and those levied on others (6200).

## **A.6 Conciliation with National Accounts**

83. This section of the tables provides a re-conciliation between the OECD calculation of total tax revenues and the total of all taxes and social contributions paid to general government as recorded in the country's National Accounts. Where the country is a member of the European Union (EU), the comparison is between the OECD calculation of total tax revenues and the sum of tax revenues and social contributions recorded in the combination of the general government and the institutions of the EU sectors of the National Accounts.

## **A.7 Memorandum item on the financing of social security benefits**

84. In view of the varying relationship between taxation and social security contributions and the cases referred to in §39 to §45, a memorandum item collects together all payments earmarked for social security-type benefits, other than voluntary payments to the private sector. Data are presented as follows (refer Table 5.37 of the Report):

- a) Taxes of 2000 series.
- b) Taxes earmarked for social security benefits.
- c) Voluntary contributions to the government.
- d) Compulsory contributions to the private sector.

Guidance on the breakdown of (a) to (d) above is provided in §39 to §45.

## **A.8 Memorandum item on identifiable taxes paid by government**

85. Identifiable taxes actually paid by government are presented in a memorandum item classified by the main headings of the OECD classification of taxes. In the vast majority of countries, only social security contributions and payroll taxes paid by government can be identified. These are, however, usually the most important taxes paid by governments (refer to Table 5.38 of the Report).

## A.9 Relation of OECD classification of taxes to national accounting systems

86. A system of national accounts (SNA) seeks to provide a coherent framework for recording and presenting the main flows relating respectively to production, consumption, accumulation and external transactions of a given economic area, usually a country or a major region within a country. Government revenues are an important part of the transactions recorded in SNA. The final version of the 2008 SNA was jointly published by five international organisations: the United Nations, the International Monetary Fund, the European Union, the Organisation for Economic Co-operation and Development, and the World Bank in August 2009. The *System* is a comprehensive, consistent and flexible set of macroeconomic accounts. It is designed for use in countries with market economies, whatever their stage of economic development, and also in countries in transition to market economies. The important parts of the SNA's conceptual framework and its definitions of the various sectors of the economy have been reflected in the OECD's classification of taxes.

87. There are, however, some differences between the OECD classification of taxes and SNA concepts that are listed below. They arise because the aim of the former is to provide the maximum disaggregation of statistical data on what are generally regarded as taxes by tax administrations.

- a) OECD includes compulsory social security contributions paid to general government in total tax revenues. Imputed and voluntary contributions plus those paid to private funds are not treated as taxes (§8 and §10 above);
- b) there are different points of view on whether or not some levies and fees are classified as taxes (§11 and §12 above);
- c) OECD excludes imputed taxes or subsidies resulting from the operation of official multiple exchange rates or from the central bank paying a rate of interest on required reserves that is different from other market rates;
- d) there are differences in the treatment of non-wastable tax credits

88. As noted in §1 and §2, headings 1000 to 6000 of the OECD list of taxes cover all unrequited payments to general government, other than compulsory loans and fines. Such unrequited payments including fines, but excluding compulsory loans can be obtained from adding together the following figures in the 2008 SNA

- value-added type taxes (D.211);
- taxes and duties on imports, excluding VAT (D.212);
- export taxes (D.213);
- taxes on products, excluding VAT, import and export taxes (D.214);
- other taxes on production (D.29);
- taxes on income (D.51);
- other current taxes (D.59);
- social contributions (D.61), excluding voluntary contributions;
- capital taxes (D.91).

## A.10 The OECD classification of taxes and the International Monetary Fund (GFS) system

89. The coverage and valuation of tax revenues in the GFS system and the 2008 SNA are very similar. Therefore, the differences between the OECD classification and that of the 2008 SNA (see §87 above) also apply to the GFS. In addition the International Monetary Fund subdivides the OECD 5000 heading

into section IV (Domestic Taxes on Goods and Services) and section V (Taxes on International Trade and Transactions). This reflects the fact that while the latter usually yield insignificant amounts of revenue in OECD countries, this is not the case in many non-OECD countries.

## A.11 Comparison of the OECD classification of taxes with other international classifications

90. The table below describes an item by item comparison of the OECD classification of taxes and the classifications used in the following:

- a) System of National Accounts (2008 SNA);
- b) European System of Accounts (2010 ESA);
- c) IMF Government Finance Statistics Manual (GFSM2014).

91. These comparisons represent those that would be expected to apply in the majority of cases. However in practice some flexibility should be used in their application. This is because in particular cases, countries can adopt varying approaches to the classification of revenues in National Accounts.

	OECD Classification		2008 SNA	2010 ESA	GFSM2014
1000	Taxes on income, profits and capital gains				
	1100	Individuals			
		1110 Income and profits	D51-8.61a	D51A	1111
		1120 Capital gains	D51-8.61c, d	D51C, D	1111
	1200	Corporations			
		1210 Income and profits	D51-8.61b	D51B	1112
		1220 Capital gains	D51-8.61c	D51C	1112
	1300	Unallocable as between 1100 and 1200			1113
2000	Social security contributions				
	2100	Employees	D613-8.85	D613	1211
	2200	Employers	D611-8.83	D611	1212
	2300	Self-employed, non-employed	D613-8.85	D613	1213
	2400	Unallocable as between 2100, 2200 and 2300			1214
3000	Taxes on payroll and workforce		D29-7.97a	D29C	112
4000	Taxes on property				
	4100	Recurrent taxes on immovable property			
		4110 Households	D59-8.63a	D59A	1131
		4120 Other	D29-7.97b	D29A	1131
	4200	Recurrent net wealth taxes			
		4210 Individual	D59-8.63b	D59A	1132
		4220 Corporations	D59-8.63b	D59A	1132
	4300	Estate, inheritance and gift taxes			
		4310 Estate and inheritance taxes	D91-10.207b	D91A	1133
		4320 Gift taxes	D91-10.207b	D91A	1133
	4400	Taxes on financial and capital transactions	D59-7.96d; D29-7.97e	D214B, C	114114; 1161
	4500	Other non-recurrent taxes on property	D91-10.207a	D91B	1135
	4600	Other recurrent taxes on property	D59-8.63c	D59A	1136
5000	Taxes on goods and services				
	5100	Taxes on production, sale and transfer of goods and services			
		5110 General taxes on goods and services			
		5111 Value-added taxes	D211-7.89	D211; D29G	11411

		5112	Sales taxes	D2122-7.94a; D214-7.96a	D21224; D214I	11412
		5113	Other general taxes on goods and services	D214-7.96a	D214I	11413
		5120	Taxes on specific goods and services			
		5121	Excises	D2122-7.94b; D214-7.96b	D21223; D214A, B, D	1142
		5122	Profits of fiscal monopolies	D214-7.96e	D214J	1143
		5123	Customs and other import duties	D2121-7.93	D2121; D21221, 2	1151
		5124	On exports	D213-7.95a	D214K	1152-4
		5125	On investment goods			
		5126	On specific services	D2122-7.94c; D214- 7.96c	D21225; D214E, F, G, H; D29F	1144; 1156
		5127	Other taxes on international trade and transactions	D2122-7.94d D29- 7.95b D29-7.97g D59-8.64d	D21226; D29D; D59E	1153; 1155- 6
		5128	Other taxes on specific goods and services			1146
		5130	Unallocable between 5110 and 5120			
	5200		Taxes on use of goods and on permission to use goods or perform activities			
		5210	Recurrent taxes on use of goods and on permission to use goods or perform activities			
		5211	Motor vehicle taxes households	D59-8.64c	D59D	11451
		5212	Motor vehicles taxes others	D29-7.97d	D214D; D29B	11451
		5213	Other recurrent taxes on use of goods and on permission to use goods or perform activities	D29-7.97c, d, f D59- 8.64c	D29B, E, F; D59D	11452
		5220	Non-recurrent taxes on permission to use goods or perform activities			11452
	5300		Unallocable as between 5100 and 5200			
	6000		Other taxes			
	6100		Payable solely by business			1161
	6200		Payable by other than business, or unidentifiable	D59-8.64a, b	D59B, C	1162

## A.12 Attribution of tax revenues by sub-sectors of general government

92. The OECD classification requires a breakdown of tax revenues by sub-sectors of government. The definition of each sub-sector and the criteria to be used to attribute tax revenues between these sub-sectors are set out below. They follow the guidance of the 2008 SNA and GFSM 2014.

### *Sub-sectors of general government to be identified*

#### a) Central government

93. The central government sub-sector includes all governmental departments, offices, establishments and other bodies which are agencies or instruments of the central authority whose competence extends over the whole territory, with the exception of the administration of social security funds. Central government therefore has the authority to impose taxes on all resident and non-resident units engaged in economic activities within the country.

#### b) State, provincial or regional government

94. This sub-sector consists of intermediate units of government exercising a competence at a level below that of central government. It includes all such units operating independently of central government

in a part of a country's territory encompassing a number of smaller localities, with the exception of the administration of social security funds. In unitary countries, regional governments may be considered to have a separate existence where they have substantial autonomy to raise a significant proportion of their revenues from sources within their control and their officers are independent of external administrative control in the actual operation of the unit's activities.

95. At present, federal countries comprise the majority of cases where revenues attributed to intermediate units of government are identified separately. Spain is the only unitary country in this position. In the remaining unitary countries, regional revenues are included with those of local governments.

c) Local government

96. This sub-sector includes all other units of government exercising an independent competence in part of the territory of a country, with the exception of the administration of social security funds. It encompasses various urban and/or rural jurisdictions (e.g., local authorities, municipalities, cities, boroughs, districts).

d) Social security funds

97. Social security funds form a separate sub-sector of general government. The social security sub-sector is defined in the 2008 SNA by the following extracts from paragraphs 4.124 to 4.126 and 4.147:

"Social security schemes are social insurance schemes covering the community as a whole or large section of the community that are imposed and controlled by government units. The schemes cover a wide variety of programmes, providing benefits in cash or in kind for old age, invalidity or death, survivors, sickness and maternity, work injury, unemployment, family allowance, health care, etc. There is not necessarily a direct link between the amount of the contribution paid by an individual and the benefits he or she may receive." (Paragraph 4.124).

"When social security schemes are separately organised from the other activities of government units and hold their assets and liabilities separately from the latter and engage in financial transactions on their own account they qualify as institutional units that are described as social security funds." (Paragraph 4.125).

"The amounts raised, and paid out, in social security contributions and benefits may be deliberately varied in order to achieve objectives of government policy that have no direct connection with the concept of social security as a scheme to provide social benefits to members of the community. They may be raised or lowered in order to influence the level of aggregate demand in the economy, for example. Nevertheless, so long as they remain separately constituted funds, they must be treated as separate institutional units in the SNA. (Paragraph 4.126).

*"The social security funds sub-sector (of general government) consists of the social security funds operating at all levels of government. Such funds are social insurance schemes covering the community as a whole or large section of the community that are imposed by government units." (Paragraph 4.147).*

98. This definition of social security funds is followed in the OECD classification with the two following exceptions which are excluded

- Schemes imposed by government and operated by bodies outside the general government sector, as defined in §3 of this manual; and
- Schemes to which all contributions are voluntary.

### **Supra-national Authorities**

99. This sub-sector covers the revenue-raising operations of supra-national authorities within a country. In practice, the only relevant supra-national authority in the OECD area is that of the institutions of the European Union (EU). As from 1998, supra-national authorities are no longer included in the

*Revenue Statistics*, to achieve consistency with the SNA definition of general government which excludes them. For example, income taxes and social security contributions collected by European Institutions and paid by European civil servants who are resident of EU member countries should not be included. However the specific levies paid by the member states of the EU continue to be included in total tax revenues and they are shown under this heading.

*Criteria to be used for the attribution of tax revenues*

100. When a government collects taxes and pays them over in whole or in part to other governments, it is necessary to determine whether the revenues should be considered to be those of the collecting government which it distributes to others as grants, or those of the beneficiary governments which the collecting government receives and passes on only as their agent. The criteria to be used in the attribution of revenues are set out in §101 to §104 which replicate paragraphs 3.70 to 3.73 from the 2008 SNA.

101. In general, a tax is attributed to the government unit that

- a) exercises the authority to impose the tax (either as a principal or through the delegated authority of the principal),
- b) has final discretion to set and vary the rate of the tax

102. Where an amount is collected by one government for and on behalf of another government, and the latter government has the authority to impose the tax, and set and vary its rate, then the former is acting as an agent for the latter and the tax is reassigned. Any amount retained by the collecting government as a collection charge should be treated as a payment for a service. Any other amount retained by the collecting government, such as under a tax-sharing arrangement, should be treated as a current grant. If the collecting government was delegated the authority to set and vary the rate, then the amount collected should be treated as tax revenue of this government.

103. Where different governments jointly and equally set the rate of a tax and jointly and equally decide on the distribution of the proceeds, with no individual government having ultimate overriding authority, then the tax revenues are attributed to each government according to its respective share of the proceeds. If an arrangement allows one government unit to exercise ultimate overriding authority, then all of the tax revenue is attributed to that unit.

104. There may also be the circumstance where a tax is imposed under the constitutional or other authority of one government, but other governments individually set the tax rate in their jurisdictions. The proceeds of the tax generated in each respective government's jurisdiction are attributed as tax revenues of that government.

***Levies paid by member states of the European Union***

105. The levies paid by the member states of the EU take the form specific levies which include

- a) custom duties and levies on agricultural goods (5123),
- b) gross monetary compensation accounts (5123 if relating to imports and 5124 if relating to exports); and
- c) Steel, coal, sugar and milk levies (5128).

106. The custom duties collected by member states on behalf of the EU are recorded

- on a gross of collection fee basis;
- using figures adjusted so that duties are shown on a 'final destination' as opposed to a 'country of first entry' basis where such adjustments can be made. These adjustments concern in particular duties collected at important (sea) ports. Although the EU duties are collected by the authorities of

the country of first entry, when possible these duties should be excluded from the revenue of the collecting country and be included in the revenue of the country of final destination

107. This is the specific EU levy that most clearly conforms to the attribution criterion described in §99 above. Consequently as from 1998, these amounts are footnoted as a memorandum item to the EU member state country tables (in Chapter 5) and no longer shown under heading 5123. However the figures are included in the total tax revenue figures on the top line for all the relevant years shown in the tables.

### A.13 Provisional classification of revenues from bank levies and payments to deposit insurance and financial stability schemes

108. The OECD have adopted the following interim approach to reporting revenue from bank levies plus deposit insurance and stability fees for the 2012 and subsequent editions of *OECD Revenue Statistics*. It is recommended that the amounts should be recorded under category 5126.

- Compulsory payments of stability fees, bank levies and deposit insurance should generally be treated as tax revenues where the payments are made to General Government and allocated to the governments' consolidated or general funds so that the Government is free to make immediate use of the money for the purposes that it chooses. This principle would apply regardless of whether the Government is promising to make payments to guarantee the banks' customer deposits in some future contingency.
- If the compulsory payments are made to general government and placed in funds that are earmarked to be entirely channelled back to the sector of the economy that comprises the companies that are subject to the payment, they would still generally be treated as tax revenues on the grounds that the funds would be available for the government and would reduce its budget deficit, the fee is unrequited for an individual entity and the amounts raised could be unrelated to any eventual pay out to depositors or expenditure on wider support for the financial sector.
- Payments to made to the smaller long-standing schemes for insuring 'retail' deposits, where the payment levels are consistent with the costs of insurance should be classified as fee for service.
- Any payments which involve governments realising the assets of a failed institution or receiving a priority claim on its assets in liquidation in order to fund payments of compensation to customers for their lost deposits would be treated as a fee for a service as opposed to tax revenues.
- Compulsory payments that are made to funds operated outside the government sector and non-state institutions backed by the deposit takers and all payments to voluntary schemes should not be treated as tax revenues.

## Notes

1. All references to SNA are to the 2008 edition.
2. See section A.12 of this guide for a discussion of the concept of agency capacity.
3. It is usually possible to identify amounts of social security contributions and payroll taxes, but not other taxes paid by government.
4. If, however, a levy which is considered as non-tax revenue by most countries is regarded as a tax — or raises substantial revenue — in one or more countries, the amounts collected are footnoted at the end of the relevant country tables, even though the amounts are not included in total tax revenues.
5. Names, however, can frequently be misleading. For example, though a passport fee would normally be considered a non-tax revenue, if a supplementary levy on passports (as is the case in Portugal) were imposed in order to raise substantial amounts of revenue relative to the cost of providing the passport, the levy would be regarded as a tax under 5200.
6. A more detailed explanation of this distinction can be found in the special feature, ‘Current issues in reporting tax revenues’, in the 2001 edition of the *Revenue Statistics*.
7. Sometimes the terms ‘non-refundable’ and ‘refundable’ are used, but it may be considered illogical to talk of ‘refundable’ when nothing has been paid.
8. A different treatment, however, is accorded to non-wastable tax credits under imputation systems of corporate income tax (§36–38).
9. This is not strictly a true tax expenditure in the formal sense. Such tax expenditures require identification of a benchmark tax system for each country or, preferably, a common international benchmark. In practice it has not been possible to reach agreement on a common international benchmark.
10. Unless based on the profit made on a sale, in which case they would be classified as capital gains taxes under 1120 or 1220.
11. In some countries the same legislation applies to both individual and corporate enterprises for particular taxes on income. However, the receipts from such taxes are usually allocable between individuals and enterprises and can therefore be shown in the appropriate sub-heading.
12. For example, “...sufficiently self-contained and independent that they behave in the same way as corporations.....(including) keeping a complete set of accounts” (2008 SNA, section 4.44).
13. In Canada — a country also referred to as having an imputation system — the (wastable) tax credit for the shareholder is in respect of domestic corporation tax deemed to have been paid whether or not a corporation tax liability has arisen. As there is no integral connection between the corporation tax liability and the credit given against income tax under such systems, these credits for dividends are treated, along with other tax credits, on the lines described in §25.

14. This may also apply where a scheme for government employees existed prior to the introduction of a general social security scheme.
15. In the 2008 SNA these are regarded as capital transfers and not as taxes (see section A.8).
16. This is the system by which the European Union adjusts for differences between the exchange rates used to determine prices under the Common Market Agricultural Policy and actual exchange rates. Payments under the system may relate to imports or exports and where these amounts are separately identifiable they are shown under the appropriate heading (5123 or 5124). In this Report, these amounts are shown gross (i.e. without deducting any subsidies paid out under the MCA system).
17. Transfers of profits of State lotteries are regarded as non-tax revenues (see also §67).

# Revenue Statistics

1965-2018

## SPECIAL FEATURE: IDENTIFYING ENVIRONMENTALLY RELATED TAXES IN REVENUE STATISTICS

Data on government sector receipts, and on taxes in particular, are basic inputs to most structural economic descriptions and economic analyses and are increasingly used in economic comparisons. This annual publication gives a conceptual framework to define which government receipts should be regarded as taxes. It presents a unique set of detailed and internationally comparable tax data in a common format for all OECD countries from 1965 onwards.

### ALSO AVAILABLE ON LINE

The data in this publication are also available on line via [www.oecd-ilibrary.org](http://www.oecd-ilibrary.org) under the title *OECD Tax Statistics* (<https://doi.org/10.1787/tax-data-en>).

Consult this publication on line at <https://doi.org/10.1787/0bbc27da-en>.

This work is published on the OECD iLibrary, which gathers all OECD books, periodicals and statistical databases. Visit [www.oecd-ilibrary.org](http://www.oecd-ilibrary.org) for more information.
