ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

Pursuant to Article 1 of the Convention signed in Paris on 14th December 1960, and which came into force on 30th September 1961, the Organisation for Economic Co-operation and Development (OECD) shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in member as well as non-member countries in the process of economic development; and
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The original member countries of the OECD are Austria, Belgium, Canada, Denmark, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The following countries became members subsequently through accession at the dates indicated hereafter: Japan (28th April 1964), Finland (28th January 1969), Australia (7th June 1971), New Zealand (29th May 1973), Mexico (18th May 1994), the Czech Republic (21st December 1995), Hungary (7th May 1996), Poland (22nd November 1996), Korea (12th December 1996) and the Slovak Republic (14th December 2000). The Commission of the European Communities takes part in the work of the OECD (Article 13 of the OECD Convention).

ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

En vertu de l'article 1^{er} de la Convention signée le 14 décembre 1960, à Paris, et entrée en vigueur le 30 septembre 1961, l'Organisation de Coopération et de Développement Économiques (OCDE) a pour objectif de promouvoir des politiques visant :

- à réaliser la plus forte expansion de l'économie et de l'emploi et une progression du niveau de vie dans les pays membres, tout en maintenant la stabilité financière, et à contribuer ainsi au développement de l'économie mondiale ;
- à contribuer à une saine expansion économique dans les pays membres, ainsi que les pays non membres, en voie de développement économique ;
- à contribuer à l'expansion du commerce mondial sur une base multilatérale et non discriminatoire conformément aux obligations internationales.

Les pays membres originaires de l'OCDE sont : l'Allemagne, l'Autriche, la Belgique, le Canada, le Danemark, l'Espagne, les États-Unis, la France, la Grèce, l'Irlande, l'Islande, l'Italie, le Luxembourg, la Norvège, les Pays-Bas, le Portugal, le Royaume-Uni, la Suède, la Suisse et la Turquie. Les pays suivants sont ultérieurement devenus membres par adhésion aux dates indiquées ci-après : le Japon (28 avril 1964), la Finlande (28 janvier 1969), l'Australie (7 juin 1971), la Nouvelle-Zélande (29 mai 1973), le Mexique (18 mai 1994), la République tchèque (21 décembre 1995), la Hongrie (7 mai 1996), la Pologne (22 novembre 1996), la Corée (12 décembre 1996) et la République slovaque (14 décembre 2000). La commission des Communautés européennes participe aux travaux de l'OCDE (article 13 de la Convention de l'OCDE).

FOREWORD

The OECD Secretariat of the Steel Committee prepares a report on steel capacity development in non-OECD economies every two years. This report reviews available material on existing capacity and on developments through early 2004. To the extent possible, expectations beyond 2005 are also reflected.

The Appendix to the report presents detailed information on existing and proposed steelmaking capacity and equipment in the non-OECD economies on a plant-to-plant basis.

The report is published on the responsibility of the Secretary-General of the OECD.

AVANT-PROPOS

Le Secrétariat du Comité de l'acier de l'OCDE établit tous les deux ans un rapport sur l'évolution des capacités de production d'acier dans les Économies non membres de l'OCDE. Le rapport passe en revue les éléments d'information disponibles sur les capacités actuelles de production et sur leur évolution jusqu'au début 2004. Dans la mesure du possible, il tient aussi compte des développements attendus après 2005.

L'appendice du rapport présente des informations détaillées, par aciéries, sur les capacités et les équipements sidérurgiques actuels et prévus dans les économies non membres de l'OCDE.

Ce rapport est publié sous la responsabilité du Secrétaire général de l'OCDE.

DEVELOPMENTS IN STEELMAKING CAPACITY IN THE NON-OECD ECONOMIES: TWO-YEARLY REPORT

I. Introduction

In accordance with the work programme of the OECD Steel Committee for 2003, the Secretariat has prepared a new edition of its two-yearly report on trends in steelmaking capacity in economies that are not members of the OECD. This report examines the current steelmaking capacity of these economies and likely changes therein up to the year 2005.

The report includes an appendix containing detailed information by country, on a company-by-company, plant or project basis, as well as on existing capacity and equipment, the starting date of planned projects, works ownership and the information sources used. It also briefly describes the progress of projects, recent changes at existing works, and, where known, the financing of projects. The capacity figures referred to in the text and the appendix are nominal or rated capacity figures; they are, therefore, not strictly comparable with the effective capacity calculated for OECD member economies.

The purpose of this report is to consolidate the information and material collected. Comments on the progress and classification are not in any way meant to represent a judgement on the feasibility or advisability of the projects in question.

II. Summary

Non-OECD steelmaking capacity is likely to remain on a continuous rise until the year 2005. Total non-OECD steelmaking capacity in 2005 is expected to be at 618.3 million tpy, up by 49.2 million tonnes from 569.1 million tpy in 2002, or an increase at an average annual rate of 2.8%.

Examining this trend by region and country, relatively striking growth is expected in the Middle East, where steelmaking capacity is expected to increase at an average annual rate of 5.8%. In terms of volume of expansion, however, China accounts for the largest part of the increase, with 28.1 million tonnes of the total 49.2 million tpy increase for all non-OECD economies. In major ASEAN¹ economies, India and Malaysia are also planning to increase steelmaking capacity, including the construction of integrated steelworks by 2005. Nevertheless, some of these projects are likelihood of facing cancellation or postponement due to the difficulties of securing financial funds.

As mentioned earlier, while the amazing pace of increasing crude steel production to meet a boosting domestic demand for steel has been seen in China, a large number of projects to increase steelmaking capacity, in which includes the expansion in both upstream and downstream facilities, are expected to make rapid progress by 2005. In addition, some projects to expand steelmaking capacity in China are in progress with capital participation by foreign steel companies. Reflecting such positive factors, steelmaking capacity in China is expected to reach 238.2 million tpy in 2005. These figures

1. The Association of Southeast Asian Nations, consisting of Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, the Philippines, Singapore, Thailand and Vietnam.

reflect the increase in nominal capacity. Actually, due to improvements in efficiency and use of better quality imported raw materials, real Chinese production capability in 2003 can be estimated to be around 240 million tonnes.

Steelmaking capacity in Latin America is expected to increase at an average annual rate of 0.5% between 2002 and 2005. In Brazil, several projects to expand steelmaking capacity through an improvement of existing facilities will have made progress by 2005. Many projects are announced to expand steelmaking capacity through the construction of electric arc furnace-based steel plants. In Venezuela, some projects to build direct reduction iron (DRI) plants are expected to be implemented by 2005.

In Central and Eastern Europe², privatisation of steel companies has been progressing, as seen in Romania. While modernisation at steelworks is expected to make steady progress, few projects to expand steelmaking capacity are expected to come to fruition in near future.

In the NIS, few changes in steelmaking capacity are expected to take place until 2005, while modernisation and restructuring of the steel industry have been making progress. On the contrary, some steel companies are facing insecure financial conditions in running operations, rather than expanding steelmaking capacity. Under the circumstances, steelmaking capacity in Russia is only expected to increase from 73.5 million tpy in 2002 to 77.5 million tpy in 2005.

III. Recent developments

This section examines developments in steelmaking capacity from 1992 to 2002, as well as the current situation in capacity, production and consumption in non-OECD economies.

Trends in capacity, production and consumption

Total steelmaking capacity of non-OECD economies increased from 410.3 million tonnes in 1992 to 569.1 million tonnes in 2002, or an increase of 38.7% over this ten-year period. The most remarkable increase occurred in China, where steelmaking capacity had been rapidly increasing up to 210.1 million tpy from 85.9 million tonnes in 1992, while there were declines in capacity of 30.6 million tonnes in the NIS and 7.4 million tonnes in Central and Eastern Europe.

2. Central and Eastern Europe economies include Albania, Bulgaria, Romania and others. The Slovak Republic, which already became a member of the OECD in late 2000, is not included as a Central and East European non-member country in this report.

Change in steelmaking capacity

Unit: million tonnes

	1992 (A)	1994	1996	1998	2000	2002 (B)	changes (B-A)	changes (B/A %)
Central and Eastern Europe	24.7	17.2	20.7	16.7	16.2	17.3	-7.4	-30.0
NIS Republics	175.1	151.0	141.9	141.9	139.1	144.5	-30.6	-17.5
Latin America	43.3	43.1	45.5	43.4	51.6	55.5	12.2	28.2
Africa	16.0	15.7	16.2	14.9	19.0	18.5	2.5	15.6
Middle East	10.0	15.5	15.8	16.2	21.7	25.0	15.0	150.0
China	85.9	106.3	118.2	124.2	145.5	210.1	124.2	144.6
Other Asia	55.3	62.9	69.1	81.7	84.1	98.2	42.9	77.6
Non-OECD total	410.3	411.7	427.4	439.0	477.2	569.1	158.8	38.7

Source: OECD Secretariat.

Capacity utilisation and self-sufficiency

Of the 569.1 million tpy steelmaking capacity of the total non-OECD economies at the end of 2002, 73.8% was being utilised, as shown in the table below. Examining this by region and country, capacity utilisation rates in China, where steel demand is expanding rapidly, was at a relatively high level of 86.4% and those in the NIS, Latin America and the Middle East kept levels between 70 and 75%. Meanwhile, Central and Eastern Europe and Africa remained at a far lower level of 51.1% and 56.9%.

Capacity utilisation rate of crude steel

Unit: million tonnes

	Capacity 2002 (A)	Crude steel production 2002 (B)	Utilisation rate (B/A%)
Central and Eastern Europe	17.3	8.8	50.8
NIS Republics	144.5	101.6	70.3
Latin America	55.5	41.1	74.1
Africa	18.5	10.6	57.3
Middle East	25.0	17.7	70.8
China	210.1	181.7	86.5
Other Asia	98.2	59.4	60.4
Non-OECD total	569.1	420.9	74.0

Source: OECD Secretariat, IISI.

Central and Eastern Europe, the NIS and Latin America were recorded at a relatively higher rate of self-sufficiency in finished steel products³ with an excess of 100% in 2002. By contrast, self-sufficiency in Africa, China and other Asia still remained below 100%. Particularly, the Middle East was at the lowest level of 51.1%.

3. These are stated in terms of product equivalent of finished products, which is calculated on the basis of crude steel production, using formulas that take into account continuously cast ratios and rolling yields.

Self-sufficient rate of finished steel

Unit: million tonnes

	Production finished steel 2002 (C)	Apparent consumption 2002 (D)	Self-sufficient rate (C/D %)
Central and Eastern Europe	7.2	5.2	138.8
NIS Republics	83.0	36.7	226.2
Latin America	37.6	26.9	139.6
Africa	9.4	10.1	93.5
Middle East	15.9	31.0	51.1
China	156.8	179.1	87.5
Other Asia	52.6	80.78	65.2
Non-OECD total	362.5	369.8	98.0

Note: Figures in terms of product equivalent of finished steel.

Source: OECD Secretariat.

Regarding China, while steelmaking facilities are being operated at the highest level in other areas, as seen in the 86.4% utilisation rate, by 2005 the self-sufficiency rate is likely to rise from its 2002 level of 87.5% through the implementation of a large number of expansion projects.

IV. Outlook for the year 2005

Between 2002 and 2005, crude steelmaking capacity in all non-OECD economies is expected to increase from 569.1 million tpy to 618.3 million tpy, or at an average annual growth rate of 2.8%.⁴ The strongest growth is expected in the Middle East, where steelmaking capacity should increase at an average rate of 5.8%. This is followed by China, with an estimated expansion of 4.3% per year.

In terms of volume, the largest expansion is expected to occur in China, which should account for 28.1 million tonnes of the total capacity increase in non-OECD economies (49.2 million tpy). With respect to the increase in China, the expansion of steelmaking capacity, which continues to grow at an astonishing pace, is expected to increase by 28.1 million tpy from 210.1 million tpy in 2002 to 238.2 million tpy in 2005. Second will be the other Asian economies (10.0 million tonnes). By contrast, few changes in steelmaking capacity are likely in Central and Eastern Europe and Latin America. In these areas, restructuring, reshaping and modernisation of the industry are continuously more imminent than expansion of the capacity.

4. The method used to estimate steelmaking capacity for the year 2005 is the same as in previous report. It is described in the Appendix. Capacity expansion is mentioned hereafter in terms of the mean case estimate.

Estimates for steelmaking capacity in 2005

Unit: million tonnes

	Existing capacity 2002 A	Increase		Capacity in 2005			% change	
		Firm	Possible	Mean B	Low	High	per annum	
							(B/A), %	(B-A)
Central and Eastern Europe	17.3	0.7	0.9	18.5	18.0	18.9	2.1	1.2
NIS Republics	144.5	0.8	6.4	148.5	145.3	151.7	0.9	4.0
Latin America	55.5	0.2	1.2	56.3	55.7	56.9	0.5	0.8
Africa	18.5	01	06	18.9	18.6	19.2	0.7	0.4
Middle East	25.0	1.5	6.3	29.7	26.5	32.8	5.8	4.7
China	210.1	14.2	27.8	238.2	224.3	252.1	4.3	28.1
Other Asia	98.2	5.4	9.1	108.2	103.6	112.7	3.3	10.0
Non-OECD Total	569.1	22.9	52.3	618.3	592.0	644.3	2.8	49.2

Source: OECD Secretariat.

Central and Eastern Europe

Few changes affecting steelmaking capacity are expected in this area. Privatisation of steel companies has still been progressing in this region although a few projects which might affect steelmaking capacity were reported in some references. In **Romania**, the government announced the beginning of privatisation of state-owned steel companies as of late 2002. The government has a policy to strengthen modernisation and restructuring of the steel industry. A few projects affecting steelmaking capacity were reported. Siderurgica S.A. Hunedoara, the Romanian long steel product producer, is planning to install an electric arc furnace with a capacity of 500 000 tpy. Incidentally, the Romanian government was likely to privatise Hunedoara by selling the plant by the end of 2003. Gavazzi Steel S.A., formerly known as Otelul Rosu Works, intends to expand its capacity with the installation of a 300 000 tpy electric arc furnace and a 540 000 tpy rolling mill.

In **Bulgaria**, the government nearly completed the privatisation of the Bulgarian steel industry in late 1999. Kremikovtzi Iron and Steel Works, the only integrated steelworks in the country, has been refraining from planning further increases in steelmaking capacity while two continuous casters are under construction at its Sofia works. A project to upgrade the existing electric arc furnaces, accompanied by the revamp of continuous billet and slab casters and a plate mill is expected at Stomana Iron and Steel Works by 2004.

The New Independent States

In **Russia**, few changes in steelmaking capacity are expected in the near future. The Russian government decided on a plan to develop the metallurgical industry of Russia. 70 open-hearth furnaces were already removed with a total capacity of 27 million tpy from 1990 to 2000, while modernisation and restructuring of the steel industry is making progress. The United Metallurgical Company (UMC), a holding company of Chusovskoi Iron and Steel Works, has announced a plan to invest USD 91 million for the construction of an 800 000 tpy electric arc furnace-based steelmaking shop equipped with a 1.2 million tpy continuous caster at Chusovoi by 2005. The project is not intended to increase the production volume but to replace obsolescent open hearth furnaces at Chusovskoi Iron and Steel Works (571 000 tpy), Vyksa Iron and Steel Works (480 000 tpy) and Chelyabinsk Tube Rolling Works (430 000 tpy), all of which are managed by UMC. A plan to install a new electric arc furnace and a ladle furnace for the purpose of the modernisation of the existing continuous billet casting

capacity at the cost of USD 30 million by 2005 at Sulinsky Metallurgichesky Zavod (Staks) was announced by the owner scrap company, Mair. With regard to other projects which may affect steelmaking capacity, Kuznetskiy Metallurgical Kombinat (KMK) is conducting its modernisation programme to expand the existing electric arc furnace-based steelmaking capacity to 1.5 million tpy by 2004. Nizhny Sergy Steel Works is expected to install a 1.2 million tpy electric arc furnace, a ladle furnace and a continuous billet caster at its plant in Sverdlovsk by 2005, with an eye to raising the downstream production capacity in future plans.

A 400 000 tpy continuous billet caster was installed at Zapsib-West Siberian Steel Works in November 2002, raising its continuous billet casting capacity up to 1.4 million tpy. Also, the company plans to expand its continuous billet and slab casting capacity through the installation of three continuous billet casters each with a capacity of 1 million tpy, and a 2 million tpy continuous slab caster by the end of 2005. Continuous casters are also planned to be installed at Taganrog Iron and Steel Works, Nizhny Tagil Iron and Steel Works and Novolipetsk Iron and Steel Works.

Against a background of stable developments in oil and gas pipeline projects in Russia, such as the Sakhalin pipeline projects, several plans to build electric-resistance welded pipe mills and seamless pipe mills are currently progressing at Severstal, Volzhsky Pipe Works and Chelyabinsk Tube Rolling Works.

In **Ukraine**, modernisation and privatisation of existing steelworks have been under way through the government-supported restructuring of the steel industry, and a few projects that might affect steelmaking capacity were reported. The installation of an electric arc furnace, a ladle furnace and a continuous slab caster is expected to increase steelmaking capacity up to 1.2 million tpy from the current 840 000 tpy at Donetsk Iron and Steel Works (DMZ) as part of the reconstruction programme. This expansion plan is considered to maintain the current level of steelmaking capacity by installing an electric arc furnace and closing down the existing open hearth furnaces for upgrading.

A continuous billet caster and a ladle furnace are being installed at Yenakiyevo Iron and Steel Works in Donetsk as part of a reconstruction programme with an investment of USD 70 million. Yenakiyevo Iron and Steel Works also plans to upgrade the existing four rolling mills for long product and three oxygen furnaces in order to improve cost and quality.

In this respect, restructuring and privatisation of the steel industry has been continued in other NIS republics and a few mini-mill projects that may increase steelmaking capacity have been reported. In **Georgia**, a project to revamp steelmaking facilities through the installation of an electric arc furnace, a ladle furnace and a continuous billet caster with the required investment of USD 135 million is expected at Rustavi Iron and Steel Works. In **Azerbaijan**, an expansion plan to build a new mini-mill based plant with a 230 000 tpy electric arc furnace is expected at Baku Steel. On the other hand, a project to install a new electric arc furnace and a continuous billet caster instead of upgrading the existing six open hearth furnaces at Azerbaijan Tube Rolling Plant Works (Azerboru) was postponed due to insecure financial backing.

Modernisation and reconstruction of existing rolling mills and installation of continuous casters have been on-going in this area. In **Uzbekistan**, a new 100-tonne electric arc furnace with a designed capacity of 350 000 tpy and a continuous billet caster have started operations at Uzbek Iron and Steel Works (Uzmetkombinat) in 2002. Uzmetkombinat also plans to install a 150 000 tpy wire rod mill, which will be supplied by German plantmaker Sket, by the end of 2004. In **Kazakhstan**, two new continuous slab casters each with a capacity of 3 million tpy are expected to be installed at Ispat Karmet JSC by 2005. **Moldova** Steel Works (MMZ) has invested USD 10 million to modernise the existing 700 000 tpy special steel bar and rod mill and to raise its capacity up to 900 000 tpy with the

support of German plantmaker SMS Demag. On the other hand, in **Belarus**, a plan to install a new wire rod mill in the second phase of modernisation programme at Belaruse Steel Works (BMZ) has been delayed due to lack of sufficient financial support. In **Estonia**, the installation of a new 500 000 tpy colour coating line is planned at Muuga Works of Galvex.

Latin America

Total steelmaking capacity in this region is expected to increase from 55.5 million tpy in 2002 to 56.3 million tpy in 2005, or at an average annual growth rate of 0.5%.

Several projects to increase steelmaking capacity through the improvement of existing facilities are expected in **Brazil**. Aços Villares S.A., which has been under control of Spain's Sidenor Group since 2000, announced a plan to modernise its existing facilities with the installation of a 430 000 tpy electric arc furnace and a continuous caster at Pindamonhanba Works in São Paulo by 2004. Belgo-Mineira Participacao Industria e Comercio Ltda. intends to invest USD 97 million to increase its steelmaking capacity at the Piracicaba Works by the end of 2004. The installation of steelmaking facilities in this expansion plan is composed of a 130-tonne electric arc furnace, a 130-tonne ladle furnace and a high-speed bar mill each with a capacity of 500 000 tpy. Gerdau S.A. plans to invest USD 410 million to build a new steelmaking plant, equipped with a 1 million tpy electric arc furnace in Arçariguama, São Paulo state by 2004. Gerdau also intends to invest USD 54 million for the installation of an electric arc furnace at its Guaira plant to boost steelmaking capacity from the current 225 000 tpy to 480 000 tpy by the end of 2006. Siderurgica Barra Mansa is planning to increase its steelmaking capacity with the installation of a 350 000 tpy electric arc furnace by 2004. Usina Siderurgica do Ceara (USC), a joint venture among Dongkuk Steel of Korea, Danieli & Co. SpA. of Italy and Cia Vale do Rio Doce (CVRD) of Brazil, plans to construct a steelmaking plant to produce slabs for export located in the north eastern part of Brazil by 2005.

In addition to the upstream expansion plans, several plans to expand downstream capacity are also expected to come into effect by 2005. Aço Minas Gerais S.A. (Açominas) is likely to attempt to expand downstream capacity through the installation of a wire rod mill, a rebar mill and a heavy section mill each with a capacity of 600 000 tpy at its Ouro Branco plant in 2004. In view of accelerating a prominent demand for steel flat products for the automobile sector, Cia Siderúrgica de Tubarão (CST) is planning to install a 2 million tpy hot strip mill, a 700 000 tpy cold rolling mill and a 400 000 tpy hot-dip galvanising mill by 2004. CST also plans to expand the continuous slab casting capacity through the construction of a third blast furnace which will increase capacity from the current 2.5 million tpy to 5.5 million tpy in the first half of 2006. Cia Siderurgica Nacional also intends to install a 1.2 million tpy hot strip mill, a 360 000 tpy cold rolling mill and a 240 000 tpy galvanising line by 2005 .

In **Argentina**, no changes with an effect on steelmaking capacity are expected from 2002 to 2005 due to proper development in the steel industry corresponding to the level of demand. A project to modernise the steelmaking capacity by installing an electric arc furnace and rolling mills was reported at San Nicholas Works of Siderca Saic; however, it is unlikely that this project will be started in the near future.

Some new projects to construct direct reduction iron (DRI) facilities have been expected to enter operation in **Venezuela**. Qualimetal, a joint venture between Italian plantmaker Danieli and a state-owned iron ore mining company, Ferrominera Orinoco, is planning to invest USD 718 million to install a DRI facility for slab production of special steel at its works in the Guyana region by 2005. Plantmaker Danieli also plans to construct a steelmaking plant with a DRI facility in Venezuela. In addition, the installation of DRI facilities to boost the existing steelmaking capacity has been expected

at Sidor, Guyana Steel Hill and Ispat Guyana. On the other hand, a HYL III direct reduction iron plant with a capacity of 1.5 million tpy at Posco Venezuela (POSVEN) has been expected to start commercial operation since June 1999. However, it is unlikely that production could start in the near future because Posco withdrew from POSVEN's management at the end of 2002 due to labour disputes.

Several projects to expand the existing rolling mill capacity are expected at Aceros Arequipa in **Peru**, Cia Siderurgica ACINOX S.A. in **Cuba** and Industrial Nacionales in **Dominican Republic**. On the other hand, in **Colombia**, a joint expansion project between Acerías de Colombia (Acesco) and Brazilian iron ore miner Companhia Vale do Rio Doce (CVRD) to build a steelmaking shop equipped with a continuous caster in Columbia is likely to be called off due to financing uncertainties.

Africa

Few projects likely to increase steelmaking capacity in this area by 2005 have been reported. In **Morocco**, a project to invest USD 40 million to build a mini-mill steelmaking plant through the installation of a 600 000 tpy electric arc furnace and a 400 000 tpy rolling mill is expected at Jorf Lasfar Mill of Societe Nationale de Siderurgie S.A. (SONASID) by 2004. In **Nigeria**, a plan to construct a new steelmaking plant at Ajaokuta Steel Co., Ltd., has been expected to come on stream with the support of steelmaking technological transfer from Japan's Kobe steel, while the rehabilitation of the steel industry has progressed following a pledge of the Nigerian government. On the other hand, a project to build a 3.5 million tpy capacity DRI based mini-mill at the Maputo Iron and Steel in **Mozambique** is likely to be suspended because of debts brought from the bankruptcy of Enron in December 2001. From the beginning of this project in 1998, US Energy Company Enron had been taking the initiative in promoting this project with the approval of the Mozambique government.

Middle East

In several Middle East economies, remarkable expansion plans in steelmaking capacity are in progress. As a consequence, the steelmaking capacity is expected to increase from 25.0 million tpy in 2002 to 29.7 million tpy in 2005, recording the highest average growth rate of 5.8%.

In **Abu Dhabi**, a plan to construct a steelmaking plant with a direct reduction iron facility at Emirates Iron and Steel Factory is expected in the Mussafah Industrial Area, located in the south of the city.

In **Egypt**, Al Ezz Steel Rebars Co. is expected to expand its steelmaking capacity with the installation of a 250 000 tpy electric arc furnace and a 100 000 tpy second rolling mill at its works in Sadat City in 2004. An expansion plan to build a mini mill steel plant with a capacity of 1.1 million tpy was also due for completion at Egyptian American Steel Rolling Co. by early 2004. Ezz Heavy Industries is expected to construct a mini-mill steelmaking plant, which comprises an electric arc furnace, a continuous thin-slab caster and a hot strip mill with each capacity of 1 million tpy.

In **Iran**, several projects to expand steelmaking capacity are expected to be implemented in the near future. National Iranian Steel Co. (Nisco) has been proceeding with several such projects. Esfahan Steel Co., a subsidiary of Nisco, is expected to complete the construction of a 1.2 million tpy capacity mini-mill plant, accompanied by a 700 000 tpy hot strip mill by 2004. In the same manner, Khozestan Steel plans to install a 1.6 million tpy electric arc furnace to increase the total steelmaking capacity to 3.6 million tpy by 2004. Mobarakeh Steel Co. is expected to expand its steelmaking capacity with the revamp of a 1.3 million tpy electric arc furnace and the installation of the sixth

800 000 tpy direct reduction iron facility by 2005. In other projects, Yards Rolling Mill is expected to install a second-hand electric arc furnace with a capacity of 300 000 tpy to come on stream by 2004.

In **Kuwait**, a plan to build a steel meltshop with a capacity of 100 000 tpy at Kuwait Metal Collecting and Shredding Co. is expected in 2004.

In **Libya**, an expansion plan to install a 700 000 tpy electric arc furnace and two continuous slab and billet casters at the Libyan Iron and Steel Co. (LISCO) is expected by 2005.

In **Qatar**, Qatar Steel Co., Ltd. (QASCO) is planning to increase its steelmaking capacity to around 1.5 million tpy in the period between 2004 and 2005 by revamping the current 80-tonne electric arc furnace. In addition, QASCO also intends to expand the capacity of direct reduction iron facility from current 800 000 tpy to 1.2 million tpy by 2005.

Several projects to expand steelmaking capacity are reported in **Saudi Arabia**. A mini-mill plant, equipped with an electric arc furnace, a ladle furnace and a continuous billet caster each with a capacity of 300 000 tpy at Al Azizia Steel is under construction. The new plant is scheduled to come on stream in 2004. The Saudi Arabian United Gulf Section Mill (UGS) is currently proceeding with the construction of a new 1 million tpy mini-mill plant, which is composed of an electric arc furnace, a continuous billet caster and a rolling mill. The construction is scheduled for completion by 2004. Furthermore, a project to construct a mini-mill based steel plant with the installation of an 850 000 tpy electric arc furnace, a continuous caster and three rolling mills is expected at Al-Ittefaq by 2005. In addition to these mini-mill projects, an expansion plan to double the existing direct reduction iron unit capacity is expected at Hadeed II (Saudi Iron and Steel Co.).

South East Asia

Steelmaking capacity in South East Asia continued to increase remarkably in recent years led by China's huge leap. Between 2002 and 2005, steelmaking capacity of the non-OECD Asian economies, excluding China, is expected to increase from 98.2 million tpy to 108.2 million tpy at an annual growth rate of 3.3%. China's steelmaking capacity is also expected to rapidly increase to at least 238.2 million tpy in 2005 from 210.1 million tpy in 2002. In addition to prominent progress in China, several projects to expand in steelmaking capacity are expected to make progress in India and Malaysia.

In **China**, while the Chinese government maintains good momentum of high economic growth even after affiliation with the World Trade Organisation (WTO) in December 2001, the Chinese steel industry is also maintaining high growth in crude steel production. In parallel with the astonishing pace of growth in crude steel production, many projects to increase steelmaking capacity in China have been progressing across the country. As a result, steelmaking capacity in China is expected to increase from 210.1 million tpy in 2002 to 238.2 million tpy in 2005 through a large number of expansion plans to meet boosted domestic demand for steel products, especially from construction, automobiles and industrial machinery industries. In addition, China's tremendous strides in steelmaking capacity are not only reflected in quantitative expansion, but also in diversification of the product mix and improvement of self-sufficiency in value-added steel products. With the amazing spread of durable consumer goods, *e.g.* automobiles and home electrical appliances, particularly in urban areas, there is also higher demand for highly valued flat steel products, notably by the manufacturing sector. China's construction sector is also making progress and increasing demand due to enormous infrastructure construction projects, including the second phase of the Three Gorges project, the Qinghai-Tibet railway and construction in view of the 2008 Summer Olympics to be held in Beijing and the 2010 World's Fair to take place in Shanghai.

To respond to this remarkable increase in steel demand, the Chinese steel industry is making rapid progress in the expansion of downstream facilities, in particular bar mills, hot strip mills, cold rolling mills, hot dip galvanising lines and colour coating lines, with capital participation of foreign companies.

Beitai Iron and Steel Co., Ltd., has an expansion plan to install two blast furnaces, a 1.2 million tpy converter, a continuous slab caster and a 1.2 million tpy medium plate mill at its plant in Liaoning City. The installation of these facilities is underway and scheduled for completion in 2005.

Changzhi Iron and Steel Co., Ltd., (Changgang) is planning to double its steelmaking capacity with the installation of a 700 000 tpy blast furnace, a 700 000 tpy LD converter and a 800 000 tpy section mill at its Changzhi works. The construction of these facilities is scheduled for completion in 2004.

In view of exploring future possibilities to fulfil increasing demand for stainless steel in China, Chinese Taipei's stainless steel producer, Walsin Lihwa Corp., is aiming to build a 1 million tpy integrated stainless steel plant in Nanjing after 2005, which will be equipped with a melting shop and continuous casting and rolling facilities.

Echeng Iron and Steel Works has installed a second 700 000 tpy electric arc furnace, a 500 000 tpy bar mill and a 300 000 tpy wire rod mill at its Hubei works.

Fujian Sanming Iron and Steel Works will also increase its steelmaking capacity with the future addition of a 500 000 tpy LD converter. Guangdong Shaoquan Iron and Steel Group Co. also plans to install two 120-tonne LD converters in 2004.

Guangzhou Zhujiang Iron and Steel Co. intends to build a new 1.1 million tpy capacity meltshop in the second phase of its expansion plan. The new meltshop is composed of an electric arc furnace, a ladle furnace and a continuous thin-slab caster, and is due to come on stream in 2004. The company is also planning to install a 1.1 million tpy cold rolling mill and a hot-dip galvanising line by 2004.

The construction of a new meltshop, equipped with a 2.5 million tpy LD converter and a 1.25 million tpy continuous thin-slab caster to replace the existing steelmaking facilities is underway at Handan Iron and Steel General Works (Hangang). The company also plans to expand its downstream capacity with the installation of a 2.5 million tpy hot rolling mill, a 1.3 million tpy cold rolling mill, a 350 000 tpy galvanising line in 2004 and two 240 000 tpy colour coating lines in 2005.

Hengyang Steel Tube Group, a seamless pipe producer, is planning to install a 600 000 tpy electric arc furnace and a 450 000 tpy seamless pipe mill, expected to be finished in 2005.

The construction of a new 700 000 tpy wire rod mill is expected at Jiangsu Shagang Group Co., Ltd. by 2004. The new mill is also composed of three blast furnaces, three LD converters and a continuous billet caster with a capacity of around 800 000 tpy each.

Jiangsu YongLian Steel Complex Group Co. intends to build a mini-mill based steelmaking shop, equipped with two 1.5 million tpy electric arc furnaces, a 1.5 million tpy continuous billet caster and a 700 000 tpy wire rod mill in 2004.

Jinan Iron and Steel Group Co. is constructing an integrated steel plant comprised of a 1.2 million tpy converter, a 3 million tpy continuous slab caster, a 3 million tpy hot strip mill and a 1 million tpy cold rolling mill in the Southeastern coastal city of Shandong, due for completion by 2005.

Jiuquan Iron and Steel Co. (JISCO) planned to double its steelmaking capacity to 4 million tpy by installing a 2 million tpy electric arc furnace, a continuous slab caster, a hot strip mill and a cold rolling mill by 2003. Lantai Steel Co. is aiming to construct a 1 million tpy integrated steelmaking works in Lanzhou province by the end of 2004.

Liuzhou Iron and Steel Co., Ltd. is planning to upgrade the existing steelmaking facilities with the installation of two new blast furnaces, two LD converters, casting and rolling mills by 2005.

Maanshan Iron and Steel Co., Ltd. (Magang) is expected to raise its steelmaking capacity to 5.15 million tpy by constructing a 1 million tpy capacity meltshop in 2003. The new meltshop will be equipped with a 1 million tpy LD converter, a 1.4 million tpy continuous slab caster, a 1.25 million tpy hot strip mill and a 1.3 million tpy cold strip mill. Incidentally, the company is also aiming at increasing its downstream capacity with the installation of a 350 000 tpy hot-dip galvanising line and two 300 000 tpy colour coating lines by 2004.

Nanjing Iron and Steel Group Co., Ltd. intends to install a 1.4 million tpy LD converter and a 350 000 tpy continuous slab caster at its Nanjing works in order to replace the existing obsolete facilities by the end of 2005. Furthermore, the company is also planning to raise its steelmaking capacity by installing two new blast furnaces and a new ladle furnace in 2005.

Ningbo Tangshan Jianlong Steel Co., a joint venture between Tangshan Jianlong Steel Co. and Shanghai Foshun, is aiming to expand its steelmaking capacity by constructing a large integrated steel plant by 2005. The new steel plant will comprise two 2.5 million tpy blast furnaces, two 2.5 million tpy LD converters, two 2 million tpy continuous slab casters and two 2 million tpy hot strip mills. With a view to keeping up with the expected trend of rising steel demand moving ahead to the 2008 Olympic Games in Beijing, the company has furthermore set a target to double its steelmaking capacity to 5 million tpy by 2008.

Pingxiang Iron and Steel Works is likely to complete a 2 million tpy integrated steel plant at its works in Pingxiang City by 2004. The new plant is comprised of three blast furnaces, three converters, three continuous billet casters, a bar mill and a wire rod mill.

For the purpose of diversifying its flat steel products, Shagang Group is working to complete the construction of a new 3 million tpy blast furnace and a hot strip mill at its works in Zhangjiagang City in 2004.

Shanghai No. 1 Iron and Steel Works is promoting a project to increase its steelmaking capacity through the installation of two LD converters with a total capacity of 2.23 million tpy and a 1.3 million tpy stainless cold rolling mill by 2004.

Shanghai Krupp Stainless Steel Co., Ltd., a joint venture between Shanghai Pudong Iron and Steel of Shanghai Baosteel Group and Krupp Thyssen Stainless of Germany, is due to construct a new integrated stainless steel works in Shanghai by 2005 as part of the second phase of the project. The new works will include a 500 000 tpy electric arc furnace, a 172 000 tpy cold rolling mill and a 196 000 tpy hot strip mill.

Shanxi Haixin Group Co. is aiming to expand its steelmaking capacity by constructing a large 5 million tpy capacity steelworks in Ningde city by 2005, which will be equipped with two 5 million tpy blast furnaces, two 5 million tpy LD converters and a medium plate mill. In addition, the company already had work in progress to install an 800 000 tpy bar mill and a 700 000 tpy speed wire rod mill

by 2003. Eventually, the company envisages raising its total steelmaking capacity up to 15 million tpy by 2008.

A plan to raise steelmaking capacity with the installation of two 1 million tpy LD converters, a continuous billet caster and a plate mill at Shaoquan Iron and Steel Group Co. is moving ahead. The construction is scheduled for completion in 2005.

Shougang Co., located in Beijing, is planning to relocate part of its steelmaking facilities to Qian'an city (Hebei province) to reduce industrial pollution at its Beijing works in view of the 2008 Olympic Games in Beijing. In this relocation plan, Shougang Co. planned a new steel plant named Shougang Qian'an Iron and Steel Co., Ltd., to be constructed by July 2004 with a steelmaking capacity of 2 million tpy instead of shutting down its No.1 factory in Beijing. The new steel plant will be equipped with a 800 000 tpy continuous caster and rolling facilities with a capacity of 2.78 million tpy.

Xingtang Iron and Steel Co., which is a subsidiary of Hualin Iron and Steel based in Hunan province, is expected to invest USD 300 million to install a new steelmaking facilities at its works in Yuetang district by 2005. The installation will include a new 1.4 million tpy converter, two ladle furnaces, a continuous slab caster and a 1.8 million tpy plate mill.

Xuanhua Iron and Steel Co. (Xuangang) is expected to install three 2 million tpy LD converters, one 900 000 tpy continuous billet caster and a 800 000 tpy bar mill with the goal of increasing its steelmaking capacity from the current level of 1 million tpy to 3 million tpy by 2005 through the opening of these new facilities.

A large number of projects to expand the downstream facilities are also due for completion in China by 2005. Shanghai Baosteel Co., Ltd. is planning to expand the downstream operations by 2005 with the installation of a 450 000 tpy hot-dip galvanising line and a 350 000 tpy CGL line, which will be supplied by Japan's Nippon Steel Co. and JFE Steel Co. In addition, the company is also expected to establish an automotive sheet joint venture with Nippon Steel Co. of Japan at its Baoshan works by the middle of 2005. The new automotive sheet joint venture is composed of a 180 000 tpy cold rolling mill and a 45 000 tpy continuous galvanising line. Furthermore, the company intends to expand its CGL capacity with the installation of a new 200 000 tpy CGL mill by September 2004 to meet the foreseen increase in construction demand for the coming 2008 Summer Olympics.

Baotou Steel and Rare Earth Co. is planning to install a new 800 000 tpy cold rolling mill and a 300 000 tpy hot-dip galvanising line at their inner Mongolian mill in 2005.

Beijing CMI Engineering Co., established as a joint venture between China's Shougang Corp and Belgian plantmaker CMI, made plans to construct a steelmaking plant equipped with a galvanising line and colour coating line near the existing Shougang steelmaking facilities by early 2004.

Chengde Iron and Steel Group Co., Ltd. (Chenggang) intends to install a new 800 000 tpy bar mill in 2004 with a view to meet the increasing demand from domestic construction market in the near future. For the same reason, Chengdu Iron and Steel is also planning to install a 600 000 tpy H-beam mill in near future.

Chinese Taipei's Yieh Phui Enterprise is proceeding with the construction of a 300 000 tpy cold rolling mill, two galvanising lines with the capacity of 500 000 tpy and a 150 000 tpy colour coating line in China in 2004.

Chongqing Iron and Steel Ltd. is likely to install a 800 000 tpy continuous slab caster, a 770 000 tpy hot strip mill, a 400 000 tpy cold rolling mill and a 250 000 tpy hot-dip galvanising line in 2004.

A plan to install a new 650 000 tpy hot strip mill at Chuanwei Iron and Steel Co. is making good progress. The construction is scheduled to be completed by the end of 2004.

Lianyuan Iron and Steel Co. (Liangang) is likely to install a continuous slab caster and a hot rolling mill in order to expand both combined capacities to 2 million tpy by 2004. In addition, the company also plans to install a 1 million tpy cold strip mill and a 300 000 tpy galvanising line in the near future.

New Fushun Steel Co. is proceeding with the installation of a 400 000 tpy wire rod plant and a 300 000 tpy ultra-thin narrow strip mill at its works in Liaoning province.

Panzhihua Iron and Steel Co. (Pangang) is planning to increase its cold rolling capacity from current 800 000 tpy to 1.2 million tpy by 2005, along with earlier plans to install a 1 million tpy continuous slab caster by late 2003. In addition, the company is targeting raising its galvanising capacity by installing a new 300 000 tpy galvanising line by the end of 2005.

Pingtian Co., which is established by Hong Kong's investment company, Bright Wise, is expected to invest USD 97 million to install a 400 000 tpy cold rolling mill, a 100 000 tpy galvanising line and a 50 000 tpy colour coating line in mainland China by 2005.

Rizhao Iron and Steel United Corporation, which is a joint venture between Laiwu Iron and Steel Co. and Jinghua Chuangwin Co., is expected to build an H-shape steel production plant with a capacity of 1.2 million tpy by 2004 in the first phase of construction work. The new company is eventually aiming to expand its H-shape steel production capacity up to 5 million tpy after the final completion of the construction in 2008.

With a view to meeting increasing steel demand from China's automobile sector, Shougang Co. is expected to install a 150 000 tpy cold rolling mill, two 80 000 tpy galvanising lines and a 170 000 tpy colour coating line. The company is also planning to install a 4 million tpy hot strip mill and a 2.8 million tpy cold rolling mill by 2004, instead of closing the outdated long product rolling facilities. In addition, Shougang Flourish Colour-Coating Corp. is aimed to install a new 400 000 tpy hot-dip galvanising line at its new works in Beijing in early 2004 in order to expand downstream facilities. The company is also proceeding with the installation of a 170 000 tpy colour coating line in 2004.

Siping Iron & Steel, a subsidiary of China's Tonghua Iron & Steel is expected to construct a 2 million tpy hot strip mill and a 1.1 million tpy cold strip mill. The construction of a hot strip mill is scheduled to be completed by the end of 2005 and cold strip mill is scheduled to come on stream by 2006.

Taiyuan Iron and Steel Co. (Taigang) is proceeding with the construction of a new meltshop, equipped with an electric arc furnace to modernise the existing steelmaking facilities by the end of 2004. The new meltshop is accompanied by two 1.2 million tpy continuous slab casters, a 250 000 tpy hot strip mill and two 230 000 tpy cold rolling mills for stainless steel.

Tangshan Iron and Steel Group Co., Ltd. (Tanggang) has been commissioned to install a 1.5 million tpy thin-slab caster and the third 1 million tpy hot strip mill by the end of 2004. In addition, Tanggang is planning to install a 450 000 tpy galvanising line by mid-2004, a cold rolling line and a colour coating line in near future.

A plan to install a new 350 000 tpy seamless steel pipe mill with investment of USD 160 million is underway at Tianjin Pipe Corp. Construction is scheduled for completion in 2004.

Union Steel China, which is a wholly owned subsidiary of Korean cold rolling company, Union Steel Manufacturing, is proceeding with the construction of downstream facilities in the eastern region of China, Jiangyin city. The company invested USD 100 million at the Jiangyin plant to install a 300 000 tpy No.1 galvanising line by March 2004, a 250 000 tpy No.2 galvanising line and a 150 000 tpy colour coating line by May 2004.

Wuhan Iron and Steel Group Co. (Wugang) is aiming to raise current cold rolling capacity with the installation of the second 2.15 million tpy cold rolling mill by the end of 2005.

In India, steelmaking capacity is expected to reach 45.4 million tpy in 2005, increasing from 38.7 million tpy in 2002. Several projects that might affect steelmaking capacity, including the construction of integrated steelworks, have been reported. Many of these projects, however, have been left incomplete due difficulties in securing financial support.

Jindal Steel & Power Ltd. planned to construct a steel plant, equipped with a 250 000 tpy mini blast furnace and two rolling mills in March 2003. The company also plans to build a coal-based direct reduction unit with a capacity of 1 million tpy in Orrisa State.

Maharashtra Seamless Ltd., an Indian stainless seamless pipe producer, is planning to construct a 200 000 tpy meltshop, equipped with a 100 000 tpy seamless pipe mill in the future. Monnet Ispat Ltd. intends to increase the steelmaking capacity with the installation of a new 200 000 tpy coal-based direct reduction unit at Raipur works. In addition, National Mineral Development Corp. (NMDC) is proceeding with the construction of a 300 000 tpy Romelt process direct reduction unit by 2004.

Rashtriya Ispat Nigam Ltd. (Vizag Steel) has been proceeding with the installation of a blast furnace and two LD converters in order to expand steelmaking capacity from current 3.2 million tpy to 4 million tpy.

Steel Authority of India Ltd. (SAIL) intends to install steelmaking facilities with a total capacity of 2 million tpy to raise the capacity to 6 million tpy during the period between 2004 and 2005 at Bhilai Works, instead of closing all existing open hearth furnaces. Furthermore, SAIL plans to modernise the existing four blast furnaces and is aiming to expand steelmaking capacity from the current level of 1.9 million tpy to 2.2 million tpy at Rourkela Works. Furthermore, SAIL is aiming to expand the existing steelmaking capacity with the installation of a 130-tonne ladle furnace at its Durgapur plant by October 2004.

Tata Iron and Steel Co. is considering an expansion plan to upgrade the existing blast furnace to raise its capacity to 1.8 million tpy from the current level of 1 million tpy at its works in Jamshdepur by 2005.

In the meantime, several projects to expand downstream capacity are also expected in the Indian steel industry. Bhushan Steel is aiming at building a 1.2 million tpy hot rolled coil steel plant in Jharsuguda district in 2007. Jindal Strips Ltd. plans to construct a 1.8 million tpy stainless steel plant at its Orrisa Works by 2005.

In the ASEAN economies, PT Krakatau Steel of Indonesia is currently considering the upgrade of existing steelmaking facilities with the installation of a new 1.2 million tpy direct reduction unit, a 900 000 tpy electric arc furnace and a 1.2 million tpy continuous slab caster by 2004. In addition, the

company plans to install a 200 000 tpy cold strip mill after 2003. Eventually the company envisages raising the steelmaking capacity to 4.5 million tpy by 2006.

In **Malaysia**, an expansion plan to boost steelmaking capacity from the current level of 450 000 tpy to 600 000 tpy is expected at Malaywata Steel. Kinsteel, which was established in 1991 as a private and state-owned company, unveiled a plan to construct a new 500 000 tpy billet casting plant, equipped with a meltshop at its Kuantan mill by 2005. Megasteel Sdn. Bhd. is planning to install two new electric arc furnaces with a capacity of 1.6 million tpy each by the end of 2004 as part of the revamp of two existing electric arc furnaces. Millennium Steel Plc. was established in July 2002 following the merger of Malaysian NTS Steel Group and two steel producing subsidiaries of The Siam Cement Group of Thailand. Millennium Steel operates three plants that include five electric arc furnaces with a capacity of 1.25 million tpy, two 940 000 tpy ladle furnaces and a 630 000 tpy wire rod mill. In addition to the expansion plans for upstream capacity, several plans for downstream expansion are also expected, including a plan to install a 150 000 tpy galvanising line expected at Yung Kong Galvanising Industries Bhd. by 2005. Ornasteel Enterprise Corp. is likely to increase its cold rolling capacity up to around 300 000 tpy and its start-up is scheduled for 2004. On the other hand, the construction of a 1.35 million tpy meltshop, equipped with a 1.1 million tpy blast furnace, has been on hold at Gunawan Iron and Steel since October 1999; however, this expansion plan is unlikely to come to fruition due to the bankruptcy of the company.

Few changes are expected to take place in steelmaking capacity in the **Philippines**. National Steel Corp. (NSC), which ceased operations at the 300 000 tpy capacity Iligan plant in November 1999 due to debts, is expected to rehabilitate the site and resume production with investor support. Philippine Steel Coating Corp. (PSCC) has postponed the start of operations of a 100 000 tpy colour coating line which was installed in 2000 at its Balayan Works due to a weak trend in domestic steel demand.

In **Thailand**, Nakomthai Strip Mill is expected to invest USD 90 million to upgrade its steel-making facilities through the installation of a 300 000 tpy electric arc furnace, a ladle furnace, a thin slab caster and a 400 000 tpy galvanising line by 2005. With regard to plans to expand the downstream facilities, BlueScope Steel, which is held by BHP of Australia, is expected to expand its production capacity of galvanising line from current 200 000 tpy to 375 000 tpy in 2005. Sahaviriya Steel Industries Public Co. is planning to install a 2 million tpy hot strip mill at its Bang Saphan Works by 2005.

In **Chinese Taipei**, Chien Shing Stainless Co. has a plan to construct a 600 000 tpy integrated stainless steel plant at its Tainan Works by 2004. The new plant is comprised of two electric arc furnaces, a ladle furnace, a continuous billet casting machine, a hot strip mill and a cord rolling mill. Feng Hsing Iron and Steel Co., Ltd., is expected to install a 400 000 tpy electric arc furnace, a ladle furnace and a 400 000 tpy continuous billet caster at its mill by 2004. Kuei Yi Industrial Corp. is planning to construct a new steelmaking plant to raise its capacity from current 1 million tpy to 3.5 million tpy at its Taichung Works. The installation of steel equipment in the expansion plan is composed of a blast furnace, a LD converter and a continuous slab caster each with a capacity of 1.5 million tpy. The technical feasibility study for implementation of the plan is being carried out by China Steel Corp., which holds 30% of shares in Kuei Yi Industrial Corp. Tung Ho Steel Enterprise has been proceeding with the construction of a new meltshop, which includes a 645 000 tpy electric arc furnace and a 1 million tpy combination billet/slab caster at its Miao-Li Works.

Yieh United Steel Corp. (YUSCO) of Yieh Loong Group is planning to build a new 400 000 tpy steelworks in Guandong province to expand its upstream steelmaking capacity by 2005, while YUSCO is planning to install a stainless cold strip mill at its Kaohsiung Works.

In **Pakistan**, Pakistan Steel Mills Corp. (PSM) plans to expand its steelmaking capacity from the current 1.1 million tpy to 3 million tpy through the investment of USD 1.6 billion to modernise the existing facilities. PSM has already received approval for the expansion plan from Pakistani government.

Several projects to construct a mini-mill-based steelmaking plant are expected in **Vietnam**. Vietnam Steel Corp. (VSC) is proceeding with expansion plans at each of its works. A plan to install a 100 000 tpy electric arc furnace and two 500 000 tpy continuous billet casters at its works in Ba Ria Vung Tau province is underway and its opening is scheduled for 2005. VSC is also expecting to construct a mini-mill-based steelmaking plant comprising a 500 000 tpy electric arc furnace and a 500 000 continuous billet caster by 2005. Vina Kyoei Steel, a joint venture between VSC and Japan's long steel producer Kyoei Steel, intends to install a 350 000 tpy electric arc furnace and a 350 000 tpy continuous billet caster by 2005.

Table 1. Non-OECD crude steelmaking capacity

In million tonnes per year

	1994	1996	1998	2000	2002	2005	Annual growth rate		
							(% per annum)		
							2000/98	2002/00	2005/02

APPENDIX

TWO-YEARLY REPORT ON DEVELOPMENTS IN STEELMAKING CAPACITY IN NON-OECD ECONOMIES

TABLE OF CONTENTS

Notes to the Appendix	26
Explanatory Notes	27
Tables:	
Africa.....	55
Central and Eastern Europe	75
Latin America	89
Middle East.....	134
New Independent States	161
Asia.....	201

ERRATA

In the preparation of this publication, certain errors in the Appendix could not be corrected prior to printing:

- Afghanistan is included in the section on the Middle East instead of Asia.
- Cyprus is included in the section on the Middle East instead of “Other Europe”.
- Estonia is included in the Central and Eastern Europe area instead of the New Independent States category.

We apologise for these errors, which will be corrected in the next edition of this publication.

NOTES TO THE APPENDIX

Methodology

In order to estimate the steelmaking capacity of non-OECD economies in the year 2005, the expansion projects of those economies were classified as “firm”, “possible”, or “unlikely” on the basis of whether plans would proceed and be completed by 2005. The criteria used to classify the projects included:

- Current stage of each project: feasibility study, planning, government approval, tendering, construction or suspension of construction.
- Availability of financial resources for each project.
- Domestic steel market: apparent steel consumption in terms of current size.
- Intention of government to establish and expand the industry; and
- Availability of raw materials and energy.

Each project was evaluated for the likelihood of its completion by 2005 according to the above criteria. Although information on a number of aspects was often lacking, the figures included in the tables are considered appropriate in the light of the original sources of information and the evidence available. The classification of projects and comments on their progress do not in any way represent a judgement or imply a view on the advisability or feasibility of the projects.

A project classified as “firm” is one which is under construction or for which contracts have been awarded and to which a major financial or state commitment has been made and which is due and on schedule for completion before 2005. “Possible” projects are those under construction or for which contracts have been awarded, but which have been delayed due to financial or technical problems and whose completion may not be realised by 2005. “Unlikely” projects are those at the feasibility or early planning stage, those yet to receive financial or state backing and those not scheduled for completion by 2005. In the Appendix, those projects are noted in the column “comments” and, in some cases, presented in brackets in the column “increase in capacity”, but are not included in the estimation of steelmaking capacity in the year 2005.

The estimate of each country’s capacity in 2005 has been obtained by adding to their existing capacity the capacity of “firm” projects and half the proposed capacity of all “possible” projects in the country. The principle of including only half the total capacity of possible projects is used as a surrogate for complete project-by-project assessments.

EXPLANATORY NOTES

Abbreviations used for equipment are:

BF	Blast furnace, of which: - charcoal - coke-based - mini
EPIF	Electric pig iron furnace
Corex	Corex ironmaking unit
DR	Direct reduction unit, of which - Codir - Finmet - Fior - HYL - Krupp - Midrex - Plasma - SLRN
IC	Iron Carbide
LF	Ladle furnace
OH	Open hearth furnace
LD	LD Basic oxygen furnace
BS	Basic Bessemer converter
EF	Electric arc furnace, of which - DC
EOF	Energy optimising furnace
Steelmkg	Unspecific steelmaking unit
CAPL	Continuous annealing and pickling line
CC	Continuous casting machine, of which - slab - thin slab - bloom - billet - round billet
SLM	Slabbing mill
BLM	Blooming mill
BTM	Billet mill
WR	Wire rod mill
STR	Bar, section, shape, beam or angle mill
Plate	Plate mill
Hot	Hot strip mill
SMLS	Seamless tube mill
Cold	Cold strip mill
HGL	Hot-dip galvanising line
EGL	Electro galvanising line
ZnAl	Zincalum coating line
Tin plate	Tin plate
Ptg	Painting line (colour coating)
ERW	Electric-resistance welded pipe mill
Rolling	Unspecific rolling mill

Capacity figures are nominal or rated capacity. The unit of capacity figures is a thousand tonnes per year, unless otherwise stated.

“Existing capacity” and “existing equipment” are those estimated as of the end of December 2002.

The capacity figures given in this report have been estimated on the basis of the most reliable information available. Nevertheless, as the information sources are limited, many of the capacity figures quoted relate to the nominal or rated capacity. In some cases, however, nominal capacity figures have been modified in line with data on actual production or aims of modernisation projects.

The “ownership” column shows a distinction between state-owned plants or projects (S) and those which are privately owned (P).

Sources of information are indicated in the column “source”. The sources given relate to developments since October 1999 in principle. Listed capacity figures are not necessarily identical to these sources’ estimates. The abbreviations used in the “source” column are:

LES CAPACITÉS DE PRODUCTION D'ACIER DES ÉCONOMIES NON MEMBRES DE L'OCDE : RAPPORT BIENNAL

Introduction

Conformément au programme de travail du Comité de l'acier de l'OCDE pour 2003, le Secrétariat a établi son rapport biennal sur les tendances d'évolution des capacités de production d'acier dans les économies non membres de l'OCDE. Le présent rapport fait donc le point sur les capacités actuelles de production d'acier de ces pays et sur les évolutions attendues d'ici 2005.

Le présent rapport comprend un appendice qui donne des informations détaillées par pays, par entreprise, par aciéries ou par projet ainsi que sur les capacités actuelles, les équipements, les dates d'entrée en service des projets prévus, la structure du capital et les sources d'information consultées. L'appendice décrit aussi succinctement l'état d'avancement des projets, les modifications apportées récemment au calendrier des travaux ainsi que, lorsqu'il est connu, le mode de financement de projets. Les chiffres sur les capacités mentionnés dans le texte et dans l'appendice sont des chiffres nominaux ou des estimations ; ils ne sont donc pas strictement comparables aux chiffres sur la capacité effective calculés pour les pays Membres de l'OCDE.

Le présent rapport a pour objet de regrouper les informations et les éléments recueillis. Les commentaires formulés sur l'état d'avancement et sur la classification des projets ne préjugent aucunement de la faisabilité ou de l'opportunité des projets en question.

II. Résumé

Les capacités de production d'acier ne devraient pas cesser d'augmenter dans les économies non membres de l'OCDE d'ici 2005. La capacité totale de production d'acier de ces pays devrait s'établir à 618.3 millions de tonnes par an (tpa) en 2005, en hausse de 49.2 millions de tonnes par rapport aux 569.1 millions de tonnes atteints en 2002, soit une progression annuelle moyenne de 2.8 %.

L'analyse de ces tendances d'évolution par grandes régions et par pays montre que la progression devrait être relativement forte au Moyen-Orient où les capacités de production d'acier devraient augmenter de 5.8 % en moyenne par an. Toutefois, en volume, c'est en Chine que la hausse devrait être la plus forte avec 28.1 millions de tonnes sur les 49.2 millions d'augmentation attendue pour l'ensemble des économies non membres de l'OCDE. L'Inde et, parmi les principaux pays membres de l'ASEAN⁵, la Malaisie prévoient aussi d'augmenter leurs capacités de production d'acier, notamment par la construction d'aciéries intégrées d'ici 2005. Néanmoins, certains de ces projets risquent d'être annulés ou retardés par des difficultés de financement.

5. Il s'agit de l'Association des pays du sud-est asiatique (Association of Southeast Asian Nations) qui comprend le Brunei, le Cambodge, l'Indonésie, le Laos, la Malaisie, le Myanmar, les Philippines, Singapour, la Thaïlande et le Vietnam.

Comme indiqué précédemment, si la production d'acier brut a augmenté en Chine à un rythme exceptionnellement élevé pour répondre à une demande intérieure d'acier en plein essor, l'exécution d'un grand nombre de projets d'accroissement des capacités de production d'acier, en aval et en amont, devrait progresser rapidement d'ici 2005. Par ailleurs, certains de ces projets sont financés avec le concours de capitaux d'entreprises sidérurgiques étrangères. Par suite de ces évolutions positives, la capacité de production d'acier de la Chine devrait atteindre 238.2 millions tpa en 2005. Ces chiffres correspondent en fait à l'accroissement de la capacité nominale, mais en raison des améliorations de l'efficience et de l'utilisation de matières premières importées de meilleure qualité, la capacité effective de production chinoise d'acier peut être estimée en 2003 aux alentours de 240 millions de tonnes.

Les capacités de production d'acier de l'Amérique latine devraient augmenter de 0.5 % par an entre 2002 et 2005. Au Brésil, plusieurs projets d'expansion des capacités devraient avancer d'ici 2005. De nombreux projets prévoient la construction d'aciéries équipées de fours à arc électrique ont été annoncés. Au Venezuela, quelques projets de construction d'aciéries par réduction directe (DRI) devraient être mis en oeuvre d'ici 2005.

En Europe centrale et orientale⁶, la privatisation des entreprises sidérurgiques s'est poursuivie, comme on peut le voir en Roumanie. Si la modernisation des aciéries devrait progresser régulièrement, seul un petit nombre de projets d'expansion des capacités de production d'acier devraient se concrétiser dans un proche avenir.

Dans les NEI, si la modernisation et la restructuration de l'industrie sidérurgique se poursuivent, la capacité de production d'acier ne devrait guère varier d'ici 2005. Certaines entreprises sidérurgiques sont plus préoccupées par le manque de ressources financières qui compromettent la poursuite de leurs activités que par l'accroissement de leur capacité de production. Dans ces circonstances, la capacité de production d'acier de la Russie qui s'est établie à 73.5 millions tpa en 2002 ne devrait pas dépasser 77.5 millions tpa en 2005.

III. Évolutions récentes

La présente section décrit l'évolution des capacités de production d'acier de 1992 à 2002, et fait le point sur la situation actuelle des capacités, de la production et de la consommation dans les économies non membres de l'OCDE.

Tendances d'évolution des capacités, de la production et de la consommation

La capacité totale de production d'acier des économies non membres de l'OCDE est passée de 410.3 à 569.1 millions de tonnes entre 1992 et 2002, soit une hausse de 38.7 % en dix ans. C'est en Chine que la progression a été le plus remarquable, la capacité de production d'acier étant passée de 85.9 millions tpa en 1992 à 210.1 millions tpa, alors qu'elle a baissé de 30.6 millions de tonnes dans les NEI et de 7.4 millions de tonnes dans les pays d'Europe centrale et orientale.

6. L'Europe centrale et orientale comprend l'Albanie, la Bulgarie, la Roumanie et d'autres pays La République slovaque, qui est devenue Membre de l'OCDE à la fin 2000, ne figure pas dans le présent rapport parmi les économies non membres d'Europe centrale et orientale.

Évolution des capacités de production d'acier

Unité: millions de tonnes

	1992 (A)	1994	1996	1998	2000	2002 (B)	Variations (B-A)	Variations (B/A %)
Europe centrale et orientale	24.7	17.2	20.7	16.7	16.2	17.3	-7.4	-30.0
Républiques des NEI	175.1	151.0	141.9	141.9	139.1	144.5	-30.6	-17.5
Amérique latine	43.3	43.1	45.5	43.4	51.6	55.5	12.2	28.2
Afrique	16.0	15.7	16.2	14.9	19.0	18.5	2.5	15.6
Moyen-Orient	10.0	15.5	15.8	16.2	21.7	25.0	15.0	150.0
Chine	85.9	106.3	118.2	124.2	145.5	210.1	124.2	144.6
Autres pays d'Asie	55.3	62.9	69.1	81.7	84.1	98.2	42.9	77.6
Total non OCDE	410.3	411.7	427.4	439.0	477.2	569.1	158.8	38.7

Source: Secrétariat de l'OCDE.

Taux d'utilisation des capacités et de couverture des besoins

Le tableau suivant montre que fin 2002, les capacités de production d'acier de l'ensemble des économies non membres de l'OCDE, évaluées à 569.1 millions tpa, étaient utilisées à 73.8 %. Si l'on ventile les taux d'utilisation par région et par pays, on constate qu'en Chine, où la demande d'acier est en plein essor, ces taux étaient comparativement élevés : 86.4 % alors que dans les NEI, en Amérique latine et au Moyen-Orient, ils ne dépassaient pas 70-75 %. Par contre, dans les pays d'Europe centrale et orientale ainsi qu'en Afrique, ils sont restés nettement plus bas, variant entre 51.1% et 56.9 %.

Taux d'utilisation des capacités de production d'acier brut

Unité: millions de tonnes

	Capacité 2002 (A)	Production d'acier brut 2002 (B)	Taux d'utilisation (B/A%)
Europe centrale et orientale	17.3	8.8	50.8
Républiques des NEI	144.5	101.6	70.3
Amérique latine	55.5	41.1	74.1
Afrique	18.5	10.6	57.3
Moyen-Orient	25.0	17.7	70.8
Chine	210.1	181.7	86.5
Autres pays d'Asie	98.2	59.4	60.4
Total non OCDE	569.1	420.9	74.0

Source: Secrétariat de l'OCDE.

L'Europe centrale et orientale, les NEI et l'Amérique latine ont enregistré des taux relativement plus élevés de couverture de leurs besoins en produits sidérurgiques finis⁷ puisqu'ils dépassaient 100 % en 2002. En revanche, en Chine ces taux sont restés inférieurs à 100 % ainsi qu'en Afrique et dans les autres pays d'Asie. C'est au Moyen-Orient que ce taux était le plus bas : 51.1 %.

7. Ces volumes sont exprimés en équivalent produits sidérurgiques finis, qui est calculé sur la base de la production d'acier brut, à l'aide de formules tenant compte de la proportion de la production obtenue par coulée continue et des rendements au laminage.

Taux de couverture des besoins en produits sidérurgiques finis

Unité: million de tonnes

	Produits sidérurgiques finis 2002 (C)	Consommation apparente 2002 (D)	Taux de couverture des besoins (C/D %)
Europe centrale et orientale	7.2	5.2	138.8
Républiques des NEI	83.0	36.7	226.2
Amérique latine	37.6	26.9	139.6
Afrique	9.4	10.1	93.5
Moyen-Orient	15.9	31.0	51.1
Chine	156.8	179.1	87.5
Autres pays d'Asie	52.6	80.78	65.2
Total non OCDE	362.4	369.8	98.0

Note: Les chiffres sont exprimés en équivalents produits sidérurgiques finis.

Source: Secrétariat de l'OCDE.

Si en Chine, les taux d'utilisation des capacités : 86.4 % en moyenne, sont les plus élevés de cette région du monde, le taux de couverture des besoins, qui s'établissait à 87.5 % en 2002, devrait encore augmenter d'ici 2005 grâce à la mise en oeuvre d'un grand nombre de projets d'expansion.

IV. Perspectives d'évolution à l'horizon 2005

Entre 2002 et 2005, la capacité de production d'acier brut de l'ensemble des économies non membres de l'OCDE devrait passer de 569.1 à 618.3 millions tpa, soit + 2.8 % en moyenne annuelle⁸. La plus forte progression est attendue au Moyen-Orient, où la capacité de production d'acier devrait augmenter en moyenne de 5.8 % par an. La Chine vient ensuite avec un taux annuel d'expansion estimé à 4.3 % par an.

En volume, c'est en **Chine** que l'on devrait enregistrer les plus fortes augmentations de capacité avec 28.1 millions de tonnes sur un total de 49.2 millions de tonnes par an attendus dans l'ensemble des économies non membres de l'OCDE. Les capacités devraient effectivement continuer à augmenter à un rythme étonnamment rapide : + 28.1 millions tpa et passer ainsi de 210.1 à 238.2 millions tpa entre 2002 et 2005. **Les autres pays d'Asie** se classeront en second (10.0 millions de tonnes). Par contre, les capacités de production d'acier dans les pays d'Europe centrale et orientale et d'Amérique latine ne devraient guère évoluer. Dans ces pays, les projets sidérurgiques privilégient actuellement la restructuration et la modernisation des entreprises sidérurgiques plutôt que l'accroissement des capacités.

8. La méthode utilisée pour estimer la capacité de production d'acier pour l'an 2005 est la même que celle utilisée dans le rapport précédent. Elle est rappelée dans l'Appendice. Les chiffres indiqués correspondent à des estimations moyennes.

Capacités de production d'acier en 2005 : estimations

Unité: million de tonnes

Capacités en service	2002	Accroissement			Capacité en 2005			Variations	
		Ferme	Possible	Est. moyenne B	Est. basse	Est. élevée	Par an	(B/A), %	(B-A)
	A								
Europe centrale et orientale	17.3	0.7	0.9	18.5	18.0	18.9	2.1	1.2	
Répubiques des NEI	144.5	0.8	6.4	148.5	145.3	151.7	0.9	4.0	
Amérique latine	55.5	0.2	1.2	56.3	55.7	56.9	0.5	0.8	
Afrique	18.5	01	06	18.9	18.6	19.2	0.7	0.4	
Moyen-Orient	25.0	1.5	6.3	29.7	26.5	32.8	5.8	4.7	
Chine	210.1	14.2	27.8	238.2	224.3	252.1	4.3	28.1	
Autres pays d'Asie	98.2	5.4	9.1	108.2	103.6	112.7	3.3	10.0	
Total non OCDE	569.1	22.9	52.3	618.3	592.0	644.3	2.8	49.2	

Source: Secrétariat de l'OCDE.

Europe centrale et orientale

Les capacités de production d'acier ne devraient guère varier dans cette région du monde. La privatisation des entreprises sidérurgiques s'est poursuivie et seul un petit nombre de projets, qui pourraient influer sur les capacités de production d'acier, a été signalé. En **Roumanie**, les autorités ont annoncé qu'elles avaient commencé à privatiser les entreprises sidérurgiques d'État depuis fin 2002 et leur priorité est accordée à la modernisation et à la restructuration de l'industrie sidérurgique. Les quelques projets appelés à avoir une incidence sur les capacités de production d'acier sont les suivants : Siderurgica S.A. Hunedoara, un fabricant roumain de produits sidérurgiques longs, prévoit d'installer un four à arc électrique d'une capacité de 500 000 tpa. Les autorités roumaines devraient privatiser Hunedoara en procédant, fin 2003 à la vente de l'aciérie. L'entreprise sidérurgique Gavazzi Steel S.A., connue auparavant sous le nom d'Otelul Rosu, prévoit d'accroître sa capacité grâce à l'installation d'un four à arc électrique de 300 000 tpa et d'un laminoir de 540 000 tpa.

En **Bulgarie**, le processus de privatisation de l'industrie sidérurgique était pratiquement achevé fin 1999. Les aciéries Kremikovtzi, seules aciéries intégrées du pays, s'abstiennent d'augmenter à l'avenir leurs capacités de production tandis que deux coulées continues sont en construction dans l'aciérie de Sofia. Dans l'aciérie de Stomana, un projet prévoit la modernisation d'ici 2004 des fours à arc électrique, des coulées continues de billettes et de brames ainsi que du laminoir à tôles fortes.

Les nouveaux États indépendants

En **Russie**, les capacités de production d'acier ne devraient guère varier dans un proche avenir. Les autorités russes ont arrêté un plan de restructuration de l'industrie métallurgique russe. 70 fours Martin, d'une capacité totale de 27 millions tpa ont déjà été éliminés entre 1990 et 2000, tandis que la modernisation de l'industrie sidérurgique se poursuit. L'United Metallurgical Company (UMC), la société de holding propriétaire de l'aciérie de Chusovskoi a annoncé un plan d'investissement de 91 millions d'USD prévoyant la construction d'ici 2005 d'une aciérie équipée d'un four à arc électrique et d'une coulée continue de 1.2 million tpa. Ce projet ne vise pas à accroître le niveau de la production mais à remplacer les fours Martin hors d'usage des aciéries Chusovskoi (571 000 tpa) et Vyksa (480 000 tpa) ainsi que dans l'unité de laminage de tubes de Chelyabinsk (430 000 tpa), qui sont toutes gérées par UMC. Un plan prévoyant l'installation d'ici 2005 et pour un coût de 30 millions

d'USD d'un nouveau four à arc électrique et d'un four à poche pour moderniser l'unité de coulée continue de billettes, de l'aciérie Sulinsky Metallurgichesky Zavod (Staks) a été annoncé par Mair, l'entreprise propriétaire de ferraille. Parmi les autres projets qui pourraient influer sur la capacité de production d'acier, il faut citer le programme de modernisation mis en route par Kuznetskiy Metallurgical Kombinat (KMK) pour augmenter la capacité de son four à arc électrique et la porter à 1.5 million tpa d'ici 2004. L'aciérie Nizhny Sergy se dotera d'ici 2005, d'un four à arc électrique de 1.2 million tpa, d'un four à poche et d'une coulée continue de billettes dans son aciéries de Sverdlovsk en vue d'augmenter ultérieurement sa capacité de production en aval.

La coulée continue de billettes de 400 000 tpa, qui a été installée en novembre 2002 dans l'aciérie Zapsib en Sibérie occidentale, portera sa capacité de production de billettes par coulée continue à 1.4 million tpa. L'entreprise prévoit aussi d'augmenter d'ici fin 2005 sa capacité de coulée continue de billettes et de brames grâce à l'installation de trois coulées continues de billettes, de 1 million tpa chacune et d'une coulée continue de brames de 2 millions tpa. L'installation de coulées continues est aussi prévue dans les aciéries de Taganrog, Nizhny Tagil et Novolipetsk.

Dans le contexte des projets de construction de plusieurs oléoducs et gazoducs en Russie comme l'oléoduc de l'Île de Sakhaline, l'installation de plusieurs unités de fabrication de tubes soudés et de tubes sans soudure à résistance électrique progresse dans les aciéries de Severstal, Volzhsky et Chelyabinsk.

En **Ukraine**, la modernisation et la privatisation des aciéries se poursuivent dans le cadre de la restructuration de l'industrie sidérurgique avec le concours des autorités ukrainiennes, tandis qu'un petit nombre de projets de nature à influer sur les capacités d'acier ont été signalés. L'installation, dans le cadre d'un programme de reconstruction, d'un four à arc électrique, d'un four à poche et d'une coulée continue de brames devrait porter la capacité de l'aciérie Donetsk de 840 000 à 1.2 million tpa. Ce plan prévoit par ailleurs la fermeture de l'actuel four Martin.

Une coulée continue de billettes et un four à poche sont en cours d'installation dans l'aciérie Yenakiyevo de Donetsk dans le cadre d'un programme de reconstruction (coût de l'investissement : 70 millions d'USD). L'aciérie Yenakiyevo prévoit aussi de moderniser ses quatre laminoirs qui fabriquent actuellement des produits longs et ses trois fours à oxygène en vue d'améliorer son rapport coût/qualité.

La privatisation et la restructuration de l'industrie sidérurgique progressent aussi dans d'autres Républiques des NEI et un petit nombre de projets de construction de mini aciéries qui pourraient se traduire par des augmentations de capacités sont signalés. En **Géorgie**, un projet de modernisation prévoit l'installation, dans l'aciérie de Rustavi, d'un four à arc électrique, d'un four à poche et d'une coulée continue de billettes, pour un investissement de 135 millions d'USD. En **Azerbaïdjan**, un plan d'expansion prévoyant la construction d'une nouvelle mini-aciéries équipée d'un four à arc électrique de 230 000 tpa est prévu à Baku Steel. D'autre part, l'exécution d'un projet prévoyant l'installation d'un nouveau four à arc électrique et d'une coulée continue de billettes, plutôt que la modernisation des six fours Martin, a été différée en raison des incertitudes financières auxquelles doit faire face l'unité de laminage de tubes de ce pays (Azerboru).

Plusieurs projets prévoyant la modernisation et la reconstruction de laminoirs ainsi que l'installation de coulées continues avancent dans cette région du monde. En **Ouzbékistan**, un nouveau four à arc électrique de 100 tonnes et d'une capacité nominale de 350 000 tpa ainsi qu'une coulée continue de billettes ont été mis en service en 2002 dans l'aciérie Ouzbek (Uzmetkombinat). Uzmetkombinat prévoit aussi d'installer d'ici fin 2004 un laminoir à fil machine de 150 000 tpa qui sera fourni par l'équipementier allemand Sket. Au **Kazakhstan**, deux nouvelles coulées continues de

brames, d'une capacité respective de 3 millions tpa doivent être installées à Ispat Karmet JSC d'ici 2005. L'aciérie (MMZ) (**Moldavie**) a investi 10 millions d'USD pour moderniser son lamoir à barres et à fil-machine en aciers spéciaux et porter sa capacité de production de 700 000 à 900 000 tpa avec le concours de l'équipementier allemand SMS Demag. Par ailleurs, au **Bélarus**, l'installation d'un nouveau lamoir à fil-machine, prévue dans la seconde étape du programme de modernisation de l'aciérie **Bélarus** (BMZ) a été différée en raison du manque de fonds. En **Estonie**, une nouvelle ligne de revêtement couleur de 500 000 tpa doit être installée dans l'aciérie Muuga de Galvex.

Amérique latine

La capacité totale de production d'acier de cette région devrait passer de 55.5 à 56.3 millions tpa entre 2002 et 2005, soit un taux moyen de progression de 0.5 % par an.

Plusieurs projets d'accroissement de la capacité de production d'acier, grâce à la modernisation des installations en service sont attendus au **Brésil**. Aços Villares S.A., qui est passé en 2000 sous le contrôle du groupe sidérurgique espagnol Sideror, a annoncé un plan de modernisation prévoyant l'installation d'un four à arc électrique de 430 000 tpa et d'une coulée continue dans son aciéries de Pindamonhanba à São Paulo d'ici 2004. L'entreprise Belgo-Mineira Participacao Industria e Comercio Ltda., a l'intention d'investir d'ici la fin de 2004, 97 millions d'USD pour augmenter la capacité de l'aciérie Piracicaba. Ce plan d'expansion prévoit l'installation d'un four à arc électrique de 130 tonnes, d'un four à poche de 130 tonnes et d'un lamoir à barres à acier rapide respectivement de 500 000 tpa. Gerdau S.A. prévoit d'investir 410 millions d'USD dans la construction d'une nouvelle aciéries, équipée d'un four à arc électrique de 1 million tpa, à Arçcariguama, dans l'État de São Paulo d'ici 2004. Gerdau a aussi l'intention d'investir 54 millions d'USD dans l'installation d'un four à arc électrique dans son aciéries de Guaira pour en porter la capacité 225 000 à 480 000 tpa d'ici fin 2006. Siderurgica Barra Mansa prévoit d'augmenter d'ici 2004 sa capacité de production d'acier grâce à l'installation d'un four à arc électrique de 350 000 tpa. Usina Siderurgica do Ceará (USC), une entreprise commune créée par le Coréen Dongkuk Steel, l'Italien Danieli & Co. SpA., et le Brésilien Cia Vale do Rio Doce (CVRD) prévoit de construire d'ici 2005 une aciéries située dans le nord-est du Brésil pour produire des brames destinées à l'exportation.

Outre les plans d'accroissement des capacités en amont, plusieurs projets d'expansion des capacités en aval devraient aussi entrer en service d'ici 2005. Aço Minas Gerais S.A. (ACOMINAS) devrait augmenter sa capacité de production sidérurgique grâce à l'installation, en 2004, d'un lamoir à fil machine, d'un lamoir à barres et d'un lamoir à profilés lourds de 600 000 tpa chacun, dans son aciéries d'Ouro Branco. Pour répondre à l'essor de la demande de produits sidérurgiques plats émanant du secteur automobile, Cia Siderúrgica de Tubarão (CST) prévoit d'installer d'ici 2004 un lamoir à bandes à chaud de 2 millions tpa, un lamoir à froid de 700 000 tpa et une unité de galvanisation à chaud de 400 000 tpa. CST prévoit aussi de porter de 2.5 à 5.5 millions tpa, au premier semestre de 2006, sa capacité de coulée continue de brames, grâce à la construction d'un troisième haut fourneau. Cia Siderurgica Nacional prévoit aussi d'installer d'ici 2005 un lamoir à bandes à chaud de 1.2 million tpa, un lamoir à froid de 360 000 tpa et une unité de galvanisation de 240 000 tpa.

En **Argentine**, la capacité de la production d'acier ne devrait pas varier entre 2002 et 2005 car le développement de l'industrie sidérurgique doit correspondre au niveau de la demande. Un projet de modernisation de l'aciérie de San Nicholas de Siderca Saic, prévoit l'installation d'un four à arc électrique et de laminoirs. Il est toutefois peu probable que ce projet puisse démarrer dans un proche avenir.

Un petit nombre de nouveaux projets de construction d'installations de réduction directe (DRI) devaient entrer en service au **Venezuela**. Qualimetal, qui est une entreprise commune de l'équipementier italien Danieli et de l'entreprise minière d'État Ferrominera Orinoco, prévoit d'investir 718 millions d'USD pour installer, dans son aciéries de la région de Guyana, une unité de réduction directe qui produira d'ici 2005 des brames en aciers spéciaux. L'équipementier Danieli prévoit aussi de construire une aciéries à réduction directe au Venezuela. Par ailleurs, Sidor, Guyana Steel Hill et Ispat Guyana devraient installer des unités de réduction directe pour augmenter leurs capacités de production d'acier. D'autre part, la mise en service commerciale de l'unité de réduction directe HYL III, d'une capacité de 1.5 million tpa située à Posco Venezuela (POSVEN) est attendue depuis juin 1999. Il est cependant peu probable que la production démarre dans un proche avenir, Posco s'étant retiré fin 2002 de la gestion de POSVEN, à la suite de conflits sociaux.

Plusieurs projets d'augmentation de la capacité de laminage sont attendus dans les aciéries d'Aceros Arequipa au **Pérou**, de Cia Siderurgica ACINOX S.A. à **Cuba** et d'Indusrial Nacionales en **République dominicaine**. Par ailleurs, en **Colombie**, un projet d'expansion conçu en commun par Acerías de Colombia (Acesco) et la compagnie minière brésilienne Vale do Rio Doce (CVRD) prévoyant la construction d'un atelier de production d'acier équipé d'une coulée continue sera vraisemblablement annulé en raison des incertitudes qui pèsent sur son financement.

Afrique

Quelques projets de nature à augmenter d'ici 2005 les capacités de production d'acier de cette région du monde ont été signalés. Au **Maroc**, la Société Nationale de Sidérurgie S.A. (SONASID) prévoit d'investir, d'ici 2004 dans son aciéries de Jorf Lasfar, 40 millions de USD pour construire une mini-aciéries qui comptera un four à arc électrique de 600 000 tpa et une unité de laminage de 400 000 tpa. Au **Nigeria**, un plan de construction d'une nouvelle aciéries à Ajaokuta Steel Co., Ltd., devait entrer en service grâce au transfert de la technologie du sidérurgiste Japonais Kobe steel, cependant que la remise en état de l'industrie sidérurgique a avancé comme les autorités nigériennes s'y étaient engagées. Par ailleurs, le projet de construction à Maputo Iron and Steel au **Mozambique** d'une mini-aciéries à réduction directe de 3.5 millions tpa sera vraisemblablement suspendu par suite de l'endettement consécutif à la faillite d'Enron en décembre 2001. Depuis le début de ce projet en 1998, Energy Company Enron des États-Unis avait pris l'initiative d'en assurer la promotion avec l'approbation des autorités du Mozambique.

Moyen-Orient

Dans plusieurs pays du Moyen-Orient, des plans d'expansion assez considérables des capacités de production d'acier devraient être menés à bien d'ici 2005. En conséquence, la capacité de production d'acier devrait passer de 25.0 à 29.7 millions tpa entre 2002 et 2005, soit le taux moyen annuel de croissance le plus élevé : 5.8 %.

A **Abu Dhabi**, il est prévu d'équiper d'une unité de réduction directe l'aciérie Emirates Iron and Steel Factory, située dans la zone industrielle de Mussafah, au sud d'Abu Dhabi.

En **Égypte**, Al Ezz Steel Rebars Co. devrait augmenter sa capacité de production d'acier, grâce à l'installation dans son aciéries de Sadat city en 2004, d'un four à arc électrique de 250 000 tpa et d'un second laminoir de 100 000 tpa. Un projet d'expansion prévoyant la construction d'une mini-aciéries de 1.1 million tpa devrait être terminé début 2004 par Egyptian American Steel Rolling Co. Ezz Heavy Industries devrait construire une mini-aciéries comprenant un four à arc électrique, une coulée continue de brames minces et un laminoir à bandes à chaud, de 1 million tpa.

En **Iran**, plusieurs projets d'expansion de la capacité de production d'acier doivent être menés à bien dans un proche avenir. National Iranian Steel Co. (Nisco) a démarré plusieurs projets d'augmentation des capacités. Esfahan Steel Co., une filiale de Nisco, devrait terminer d'ici 2004, la construction d'une miniaciérie de 1.2 million tpa et d'un laminoir à bandes à chaud de 700 000 tpa. De même, Khozestan Steel prévoit d'installer un four à arc électrique de 1.6 million tpa pour porter à 3.6 millions tpa d'ici 2004, sa capacité totale de production d'acier. Mobarakeh Steel Co. devrait augmenter sa capacité de production d'acier grâce à la modernisation d'un four à arc électrique de 1.3 million tpa et à l'installation d'ici 2005 d'une sixième unité de réduction directe de 800 000 tpa. Parmi d'autres projets, Yards Rolling Mill devait installer un four à arc électrique d'occasion, de 300 000 tpa : mise en service prévue en 2004.

Au **Koweit**, Kuwait Metal Collecting and shredding Co. prévoit de construire en 2004 un atelier de fusion de 100 000 tpa.

En **Libye**, un projet d'expansion prévoit l'installation d'ici 2005 d'un four à arc électrique de 700 000 tpa et de 2 coulées continues de brames et de billettes dans l'aciérie Libyan Iron and Steel Co. (LISCO).

Au **Qatar**, Qatar Steel Co., Ltd. (QASCO) prévoit de porter sa capacité de production d'acier aux alentours de 1.5 million tpa entre 2004 et 2005, grâce à la modernisation de son four à arc électrique de 80 tonnes. Par ailleurs, QASCO a également l'intention de porter de 800 000 à 1.2 million tpa d'ici 2005 la capacité de son aciéries à réduction directe.

Plusieurs projets d'augmentation de la capacité de production d'acier sont signalés en **Arabie Saoudite**. Une miniaciérie, équipée d'un four à arc électrique, d'un four à poche et d'une coulée continue de billettes, de 300 000 tpa chacun, sont en construction à Al Azizia Steel et la mise en service est prévue en 2004. L'aciérie saoudienne United Gulf Section Mill (UGS) procède actuellement à la construction d'une nouvelle miniaciérie de 1 million tpa, qui comprendra un four à arc électrique, une coulée continue de billettes et un laminoir. Les travaux devraient être terminés en 2004. Par ailleurs, il est prévu de construire à Al-Ittefaq d'ici 2005, une miniaciérie composée d'un four à arc électrique de 850 000 tpa, d'une coulée continue et de trois laminoirs. Outre ces deux projets de miniaciéries, un plan d'expansion prévoit de doubler d'ici 2003 la capacité de l'unité de réduction directe de Hadeed II (Saudi Iron and Steel Co.).

Asie du sud-est

Les capacités de production d'acier en Asie du sud-est ont continué à augmenter à un rythme remarquablement élevé ces dernières années, du fait notamment de l'essor considérable de la production chinoise. Entre 2002 et 2005, les capacités de production d'acier des économies asiatiques non membres de l'OCDE, Chine non comprise, devraient passer de 98.2 à 108.2 millions tpa, soit +3.3 % par an. Les capacités chinoises devraient elles aussi augmenter rapidement et passer de 210 millions tpa en 2002 à au moins 238.2 millions tpa en 2005. Outre ces accroissements considérables attendus en Chine, plusieurs projets d'expansion des capacités de production d'acier sont prévus en Inde et en Malaisie.

En **Chine**, la croissance économique se poursuit à un rythme rapide, alors que ce pays a adhéré à l'Organisation mondiale du commerce (OMC) en décembre 2001. La production d'acier brut continue à augmenter très rapidement et de ce fait, de nombreux projets d'expansion des capacités de production d'acier sont en cours d'exécution dans tout le pays. Les capacités devraient ainsi passer de 210.1 à 238.2 millions tpa entre 2002 et 2005, du fait du grand nombre de plans d'expansion destinés à répondre à l'essor de la demande intérieure de produits sidérurgiques, en particulier pour le bâtiment,

l'automobile et les industries mécaniques. Par ailleurs, l'essor considérable de l'industrie sidérurgique ne se manifeste pas seulement sur le plan quantitatif, mais aussi sur le plan qualitatif : diversification des gammes de produits fabriqués et amélioration du taux de couverture des produits sidérurgiques à valeur ajoutée. La diffusion à un rythme étonnamment rapide de biens de consommation durables, comme les automobiles et les appareils ménagers électriques, essentiellement dans les zones urbaines, a entraîné une augmentation des besoins en produits sidérurgiques plats à forte valeur ajoutée, essentiellement destinés au secteur manufacturier. De l'autre côté, le secteur de la construction en Chine se développe lui aussi dans le sillage d'immenses projets d'aménagement d'infrastructures, y compris la seconde tranche du projet de construction du barrage des Trois Gorges et de la voie ferrée Qinghai-Tibet ainsi que les différents travaux d'aménagement prévus pour les prochains Jeux Olympiques qui auront lieu à Pékin en 2008 et l'Exposition universelle qui se tiendra à Shanghai en 2010.

Face à cet essor tout à fait remarquable de la demande d'acier, l'industrie sidérurgique chinoise développe rapidement ses capacités en aval, en particulier, la construction de laminoirs à barres, de laminoirs à bandes, de laminoirs à froid, de lignes de galvanisation par immersion à chaud et de lignes de revêtement couleur, avec la participation en capital de sociétés étrangères.

Le plan d'expansion de Beital Iron and Steel Co., Ltd. prévoit d'installer dans son aciéries Liaoning deux hauts fourneaux, un convertisseur de 1.2 million tpa, une coulée continue de brames et un laminoir à tête d'épaisseur moyenne de 1.2 million tpa. Les travaux sont en cours et devraient être terminés en 2005.

Changzhi Iron and Steel Co., Ltd. (Changgang) prévoit de doubler la capacité de son aciéries de Changzhi grâce à l'installation d'un haut fourneau de 700 000 tpa, d'un convertisseur LD de 700 000 tpa et d'un laminoir à profilés de 800 000 tpa. Les travaux devraient être terminés d'ici 2004.

Soucieux d'exploiter les possibilités offertes par la hausse de la demande d'acier inoxydable en Chine, Walsin Lihwa Corp., un producteur d'acier inoxydable du Taipei chinois, projette de construire après 2005 à Nanjing (Nankin) une aciéries intégrée de 1 million tpa pour produire de l'acier inoxydable qui comprendra un atelier de fusion ainsi que des installations de coulée continue et de laminage.

L'aciérie Echeng a installé, dans son aciéries de Hubei, un deuxième four à arc électrique de 700 000 tpa, un laminoir à barres de 500 000 tpa et un laminoir à fil-machine de 300 000 tpa.

L'aciérie Fujian Sanming prévoit d'augmenter ultérieurement sa capacité de production d'acier grâce à l'installation d'un convertisseur LD de 500 000 tpa. Le groupe sidérurgique Guangdong Shaoquan prévoit aussi d'installer en 2004 deux convertisseurs LD de 120 tonnes.

Guangzhou Zhujiang Iron and Steel Co. prévoit de construire un nouvel atelier de fusion de 1.1 million tpa dans le cadre de la seconde tranche de son plan d'expansion. Le nouvel atelier, qui comprend un four à arc électrique, un four à poche et une unité de coulée continue de brames minces devrait entrer en service en 2004. L'entreprise prévoit aussi d'installer d'ici fin 2004 un laminoir à froid de 1.1 million tpa et une ligne de galvanisation par immersion à chaud.

Handan Iron and Steel General Works (Hangang) construit un nouvel atelier de fusion, équipé d'un convertisseur LD de 2.5 millions tpa et d'une unité de coulée continue de brames minces de 1.25 million tpa pour remplacer les installations actuelles. L'entreprise prévoit aussi d'accroître ses capacités en aval grâce à l'installation en 2004, d'un laminoir à chaud de 2.5 millions tpa, d'un

laminoir à froid de 1.3 million tpa et d'une ligne de galvanisation de 350 000 tpa ainsi que de deux lignes de revêtement couleur de 240 000 tpa, en 2005.

Hengyang Steel Tube Group, qui produit des tubes sans soudure, prévoit d'installer d'ici 2005 un four à arc électrique de 600 000 tpa et une unité de production de tubes sans soudure de 450 000 tpa.

Jiangsu Shagang Group Co., Ltd. prévoit de construire en 2004 un nouveau laminoir à fil-machine de 700 000 tpa. La nouvelle aciérie comprend également trois hauts fourneaux, trois convertisseurs LD et une coulée continue de billettes, de 800 000 tpa environ chacun.

Le complexe sidérurgique Jiangsu YongLian prévoit de construire en 2004 un atelier de fusion équipé de deux fours à arc électrique de 1.5 million tpa, d'une coulée continue de billettes de 1.5 million tpa et d'un laminoir à fil-machine de 700 000 tpa.

Le groupe sidérurgique Jinan Iron and Steel Group Co. va construire d'ici 2005 une aciérie intégrée qui comprendra un convertisseur de 1.2 million tpa, une coulée continue de brames de 3 millions tpa, un laminoir à bandes à chaud de 3 millions tpa et un laminoir à froid de 1 million tpa, dans la ville de Shandong située sur la côte sud-est.

Jiuquan Iron and Steel Co. (JISCO) prévoit de doubler en 2003 sa capacité de production d'acier pour la porter à 4 millions tpa grâce à l'installation d'un four à arc électrique de 2 millions tpa, d'une coulée continue de brames, d'un laminoir à bandes à chaud et d'un laminoir à froid. Lantai Steel Co. prévoit de construire, d'ici fin 2004, une aciérie intégrée de 1 million tpa dans la province de Lanzhou.

Liuzhou Iron and Steel Co., Ltd. prévoit de moderniser d'ici 2005 son aciérie grâce à l'installation de deux nouveaux hauts fourneaux, de deux convertisseurs LD et d'unités de fusion et de laminage.

Maanshan Iron and Steel Co., Ltd. (Magang) compte porter à 5.15 millions tpa sa capacité de production d'acier en 2003 grâce à la construction d'un atelier de fusion de 1 million tpa. Ce nouvel atelier comprendra un convertisseur LD de 1 million tpa, une coulée continue de brames de 1.4 million tpa, un laminoir à bandes à chaud de 1.25 million tpa et un laminoir à bandes à froid de 1.3 million tpa. L'entreprise prévoit aussi d'augmenter sa capacité de production en aval avec l'installation en 2004 d'une unité de galvanisation à chaud de 350 000 tpa et de deux unités de revêtement couleur de 300 000 tpa.

Nanjing Iron and Steel Group Co., Ltd. prévoit d'installer d'ici fin 2005 un convertisseur LD de 1.4 million tpa et une coulée continue de brames de 350 000 tpa dans son aciérie de Nanjing (Nankin) pour remplacer les installations actuelles qui sont désuètes. Par ailleurs, le groupe sidérurgique prévoit aussi d'augmenter ses capacités grâce à l'installation en 2005 de deux nouveaux hauts fourneaux et d'un nouveau four à poche.

Ningbo Tangshan Jianlong Steel Co., entreprise commune de Tangshan Jianlong Steel Co. et de Shanghai Foshun, prévoit d'augmenter sa capacité grâce à la construction d'ici 2005, d'une immense aciérie intégrée qui comprendra : deux hauts fourneaux de 2.5 millions tpa, deux convertisseurs LD de 2.5 millions tpa, deux coulées continues de brames de 2 millions tpa et deux laminoirs à bandes à chaud de 2 millions tpa. Pour répondre à l'augmentation de la demande d'acier attendue à l'occasion des jeux olympiques de Pékin en 2008, le Groupe projette en outre de doubler sa capacité de production d'acier pour la porter à 5 millions tpa d'ici 2008.

Pingxiang Iron and Steel Works devrait installer en 2004 une aciérie intégrée de 2 millions tpa dans son aciérie située dans la ville de Pingxiang. La nouvelle aciérie comprendra trois hauts fourneaux, trois convertisseurs, trois coulées continues de billettes, un lamoir à barres et un lamoir à fil machine.

Afin de diversifier sa production de produits sidérurgiques plats, le Groupe Shagang prévoit de terminer en 2004 la construction d'un nouveau haut fourneau de 3 millions tpa et d'un lamoir à bandes à chaud dans son aciérie située dans la ville de Zhangjiagang.

L'aciérie Shanghai No 1 prévoit d'augmenter sa capacité de production d'acier grâce à l'installation d'ici 2004 de deux convertisseurs LD d'une capacité totale de 2.23 millions tpa et d'un lamoir d'acier inoxydable à froid de 1.3 million tpa.

Shanghai Krupp Stainless Steel Co., Ltd., entreprise commune de Shanghai Pudong Iron and Steel du groupe sidérurgique Shanghai Baosteel et de l'Allemand Krupp Thyssen Stainless doit construire d'ici 2005, à Shanghai, dans le cadre de la seconde tranche du projet, une nouvelle aciérie intégrée, qui produira de l'acier inoxydable et comprendra un four à arc électrique de 500 000 tpa, un lamoir à froid de 172 000 tpa et un lamoir à bande à chaud de 196 000 tpa.

Shanxi Haixin Group Co. prévoit d'augmenter sa capacité de production d'acier par la construction dans la ville de Ningde, d'ici 2005 d'une énorme aciérie de 5 millions tpa équipée de 2 hauts fourneaux de 5 millions tpa, de deux convertisseurs LD de 5 millions tpa et d'un lamoir à tôles d'épaisseur moyenne. De plus, le Groupe a l'intention d'installer en 2003 un lamoir à barres de 800 000 tpa et un lamoir rapide à fil-machine de 700 000 tpa. Il envisage de porter sa capacité totale de production d'acier à 15 millions tpa d'ici 2008.

Le plan d'accroissement de la capacité de production d'acier de Shaoquan Iron and Steel Group Co. qui prévoit l'installation de deux convertisseurs LD de 1 million tpa d'une coulée continue de billettes et d'un lamoir à tôles fortes suit son cours et devait être mené à bien en 2005.

Shougang Co., prévoit de délocaliser une partie de ses installations sidérurgiques de Pékin, dans la ville de Qian'an city, province de Hebei, pour réduire la pollution industrielle de la capitale durant les Jeux Olympiques de 2008. Dans le cadre de ce projet de délocalisation, Shougang Co. prévoit de construire d'ici juillet 2004 une nouvelle aciérie de 2 millions tpa, qui s'appellera Shougang Qian'an, plutôt que de fermer son aciérie n°1 à Pékin. La nouvelle aciérie sera équipée d'une coulée continue de 800 000 tpa et d'installations de laminage de 2.78 millions tpa.

Xingtang Iron and Steel Co., qui est une filiale de Hualin Iron and Steel basée dans la province de Hunan, doit investir USD 300 millions pour construire d'ici 2005 de nouvelles installations de fabrication d'acier dans son aciérie située dans le district de Yuetang. La nouvelle installation comprend un nouveau convertisseur de 1.4 million tpa, deux fours à poche, une coulée continue de brames et un lamoir à tôles fortes de 1.8 million tpa.

Xuanhua Iron and Steel Co. (Xuangang) prévoit d'installer trois convertisseurs LD de 2 millions tpa, une coulée continue de billettes de 900 000 tpa et un lamoir à barres de 800 000 tpa. La mise en service de ces nouvelles installations devrait permettre à Xuangang de porter sa capacité de production d'acier de 1 à 3 millions tpa d'ici 2005.

De nombreux projets d'augmentation des capacités de production en aval devraient aussi être menés à bien d'ici 2005. C'est ainsi que Shanghai Baosteel Co., Ltd. prévoit d'accroître ses capacités en aval grâce à l'installation d'ici 2005 d'une ligne de galvanisation à chaud de 450 000 tpa et d'une

ligne de galvanisation en continu (CGL) de 350 000 tpa, qui seront fournies par les Japonais Nippon Steel Co. et JFE Steel Co. Par ailleurs, Shanghai Baosteel Co. prévoit aussi d'ouvrir, dans son aciéries de Baoshan une unité de production de tôles pour l'industrie automobile, dans le cadre d'une entreprise commune conclue avec le Japonais Nippon Steel. La nouvelle aciéries comprendra une installation de laminage à froid de 180 000 tpa et une ligne de galvanisation en continu de 45 000 tpa. De plus, Shanghai Baosteel Co entend développer d'ici septembre 2004 sa capacité de CGL grâce à l'installation d'une nouvelle unité de 200 000 tpa, pour répondre à la demande attendue du secteur du bâtiment, dans la perspective des jeux olympiques de 2008.

Baotou Steel and Rare Earth Co. prévoient d'installer en 2005 un nouveau laminoir à froid de 800 000 tpa et une ligne de galvanisation à chaud de 300 000 tpa dans leur aciéries située en Mongolie intérieure.

Beijing CMI Engineering Co., entreprise commune de Shougang Corp et de l'équipementier belge CMI, doit construire au début 2004, une aciéries équipée d'une ligne de galvanisation et d'une ligne de revêtement couleur à proximité de ses installations de Shougang. L'installation de ces deux lignes nouvelles devrait être terminée début 2004.

Chengde Iron and Steel Group Co., Ltd. (Chenggang) prévoit d'installer en 2004 un nouveau laminoir à barres de 800 000 tpa en vue de répondre à la demande grandissante attendue du secteur de construction de logements. Pour la même raison, Chengdu Iron and Steel prévoit aussi d'installer dans un proche avenir un laminoir à poutrelles en H de 600 000 tpa.

Yieh Phui Enterprise du Taipei chinois a entrepris de construire un laminoir à froid de 300 000 tpa, deux lignes de galvanisation de 500 000 tpa et une ligne de revêtement couleur de 150 000 tpa dont la mise en service en Chine est prévue pour 2004.

Chongqing Iron and Steel Ltd. devrait installer en 2004 une coulée continue de brames de 800 000 tpa, un laminoir à bandes à chaud de 770 000 tpa, un laminoir à froid de 400 000 tpa et une ligne de galvanisation à chaud de 250 000 tpa.

Un projet d'installation d'un nouveau laminoir à bandes à chaud de 650 000 tpa dans l'aciérie de Chuanwei progresse comme prévu. Les travaux devraient être terminés fin 2004.

L'aciérie Lianyuan (Liangang) devrait installer en 2004 une coulée continue de brames et un laminoir à chaud pour porter sa capacité totale à 2 millions tpa. Liangang prévoit aussi d'installer dans un proche avenir un laminoir à bandes à froid de 1 million tpa et une ligne de galvanisation de 300 000 tpa.

New Fushun Steel Co. installe une unité de laminage de fil-machine de 400 000 tpa et d'un laminoir à bandes étroites et ultra-minces de 300 000 tpa dans son aciéries située dans la province de Liaoning.

Panzhihua Iron and Steel Co. (Pangang) prévoit de porter sa capacité de laminage à froid de 800 000 à 1.2 million tpa d'ici 2005, et a l'intention d'installer fin 2003 une coulée continue de brames de 1 million tpa. Par ailleurs, l'entreprise compte aussi augmenter sa capacité de galvanisation grâce à l'installation d'ici fin 2005 d'une nouvelle ligne de galvanisation de 300 000 tpa.

Pingtian Co., qui a été créée par la société d'investissement de Hong Kong, Bright Wise, devrait investir d'ici 2005 97 millions d'USD dans l'installation en Chine continentale d'un laminoir à froid

de 400 000 tpa, d'une ligne de galvanisation de 100 000 tpa et d'une ligne de revêtement couleur de 50 000 tpa.

Rizhao Iron and Steel United Corporation, entreprise commune de Laiwu Iron and Steel Co. et de Jinghua Chuangwin Co., devrait construire d'ici 2004 une unité de production de profilés en H d'une capacité de 1.2 million tpa, dans le cadre de la première tranche des travaux de construction. La nouvelle société envisage de porter sa capacité de production de profilés en H à 5 millions tpa lorsque les travaux seront achevés en 2008.

Pour répondre à la demande croissante d'acier émanant de l'industrie automobile chinoise, Shougang Co. prévoit d'installer d'ici 2003 une unité de laminage à froid de 150 000 tpa, deux lignes de galvanisation de 80 000 tpa et une ligne de revêtement couleur de 170 000 tpa. Elle prévoit aussi d'installer en 2004 un laminoir à bandes à chaud de 4 millions tpa et un laminoir à froid de 2.8 millions tpa, au lieu de fermer ses installations désuètes de laminage de produits longs. Par ailleurs, pour augmenter la capacité de ses installations en aval, Shougang Flourish Colour-Coating Corp., prévoit d'installer début 2004 une nouvelle ligne de galvanisation à chaud de 400 000 tpa, dans sa nouvelle aciéries de Pékin. Afin d'accroître ses capacités en aval, elle va installer d'ici 2004 d'une ligne de revêtement couleur de 170 000 tpa.

Siping Iron & Steel, une filiale de la société chinoise Tonghua Iron & Steel devrait construire un laminoir à bandes à chaud de 2 millions tpa et un laminoir à bandes à froid de 1.1 million tpa. La construction du premier devrait être terminée d'ici fin 2005 et le second devrait entrer en service d'ici 2006.

Afin de moderniser ses installations Taiyuan Iron and Steel Co. (Taigang) construit pour fin 2004 un nouvel atelier de fusion équipé d'un four à arc électrique. Ce nouvel atelier sera équipé de deux coulées continues de brames de 1.2 million tpa, d'un laminoir à bandes à chaud de 250 000 tpa et de deux laminoirs à froid en acier inoxydable de 230 000 tpa.

Tangshan Iron & Steel Group Co., Ltd (Tanggang) a été chargé d'installer d'ici fin 2004 une coulée continue de brames minces de 1.5 million tpa et le troisième laminoir à bandes à chaud de 1 million tpa. Elle prévoit en outre d'installer une ligne de galvanisation de 450 000 tpa d'ici le milieu de 2004 et prochainement, une ligne de laminage à froid ainsi qu'une ligne de revêtement couleur.

Tianjin Pipe Corp. Prévoit d'installer une nouvelle unité de production de tubes en acier sans soudure de 350 000tpa pour un coût d'investissement de 160 millions d'USD. La construction de cette installation devrait être terminée en 2004.

Union Steel China, qui est une filiale à 100 % de Union Steel Manufacturing, une entreprise coréenne de laminage à froid construit une unité de fabrication de produits sidérurgiques dans la ville de Jiangyin, à l'est de la Chine. Elle investit 100 millions d'USD dans l'aciérie de Jiangyin pour installer la ligne n°1 de galvanisation de 300 000 tpa, d'ici mars 2004, la deuxième de 250 000 tpa et une ligne de revêtement couleur de 150 000 tpa d'ici mai 2004.

Wuhan Iron and Steel Group Co. (Wugang) compte augmenter d'ici fin 2005 sa capacité de laminage à froid grâce à l'installation d'un second laminoir à froid de 2.15 millions tpa.

En **Inde**, la capacité de production d'acier de ce pays devrait passer de 38.7 à 45.4 millions tpa entre 2002 et 2005. Plusieurs projets de nature à influer sur cette capacité, notamment la construction

d'aciéries intégrées, ont été signalés. Toutefois, bon nombre de ces projets n'ont pas été terminés en raison des difficultés de financement.

Jindal Steel & Power Ltd. a l'intention de construire en mars 2003 une aciéries, équipée d'un mini haut fourneau de 250 000 tpa et de deux lamoins. Elle prévoit aussi de construire dans l'État d'Orrisa une unité de réduction directe alimentée au charbon d'une capacité d'un million tpa.

Maharashtra Seamless Ltd., un producteur indien de tubes sans soudure en acier inoxydable, prévoit de construire un atelier de fusion de 200 000 tpa équipé d'une unité de production de tubes sans soudure de 100 000 tpa. Monnet Ispat Ltd. prévoit d'accroître sa capacité de production d'acier grâce à l'installation, dans son aciéries de Raipur, d'une nouvelle unité de réduction directe alimentée au charbon de 200 000 tpa. En outre, National Mineral Development Corp. (NMDC) construit pour 2004 une unité de réduction directe (procédé Romelt) de 300 000 tpa.

Rashtriya Ispat Nigam Ltd. (Vizag Steel) a installé un haut fourneau et deux convertisseurs LD pour porter sa capacité de production d'acier de 3.2 à 4 millions tpa.

Steel Authority of India Ltd. (SAIL) prévoit d'installer entre 2004 et 2005 une unité de production d'acier de 2 millions tpa pour porter à 6 millions tpa la capacité de ses aciéries de Bhilai, au lieu de fermer la totalité de ses fours Martin. Par ailleurs, SAIL prévoit de moderniser ses quatre hauts fourneaux en service, en vue de porter de 1.1 à 2.2 millions tpa la capacité de ses aciéries de Rourkela. En outre, SAIL prévoit d'augmenter, d'ici octobre 2004, la capacité de production de son aciéries de Durgapur grâce à l'installation d'un four à poche de 130 tonnes.

Tata Iron and Steel Co. envisage un plan d'expansion prévoyant la modernisation de ses hauts fourneaux afin de porter de 1 à 1.8 million tpa d'ici 2005 la capacité de son aciéries de Jamshedpurby.

Dans l'intervalle, plusieurs projets d'expansion de la capacité de production en aval sont aussi attendus dans l'industrie sidérurgique indienne. C'est ainsi que Bhushan Steel prévoit de construire en 2007 une unité de laminage à chaud de bobines de 1.2 million tpa, et Jindal Strips Ltd. prévoit de construire d'ici 2005 une unité de production d'acier inoxydable de 1.8 million tpa dans son aciéries d'Orrisa.

Dans les pays de l'ASEAN, PT Krakatau Steel **d'Indonésie** envisage de moderniser ses installations sidérurgiques en construisant en 2004 une nouvelle unité de réduction directe de 1.2 million tpa, un four à arc électrique de 900 000 tpa et une coulée continue de brames de 1.2 million tpa. La société compte aussi construire par la suite un lamoins à bandes à chaud de 200 000 tpa et envisage de porter sa capacité de production d'acier à 4.5 millions tpa d'ici 2006.

En **Malaisie**, un plan d'expansion prévoit de porter de 450 000 tpa à 600 000 tpa la capacité de production d'acier de Malaywata Steel. Kinsteel, une entreprise mixte (à capitaux publics et privés) créée en 1991, a annoncé son projet de construire d'ici 2005 dans son aciéries de Kuantan une nouvelle installation de coulée de billettes de 500 000 tpa, équipée d'un atelier de fusion. Megasteel Sdn. Bhd. prévoit d'installer, d'ici fin 2004, deux nouveaux fours à arc électrique de 1.6 million tpa chacun, dans le cadre du programme de modernisation de ses deux fours à arc. Millennium Steel Plc qui est issu de la fusion, en 2002, du groupe sidérurgique malais NTS et de deux filiales sidérurgiques du Thaïlandais Siam Cement Group. Millennium Steel, exploite trois aciéries équipées de cinq fours à arc électrique de 1.25 million tpa, deux fours à poche de 940 000 tpa et un lamoins à fil-machine de 630 000 tpa. En outre, plusieurs plans d'expansion de la capacité en aval ont aussi été annoncés. Yung Kong Galvanising Industries Bhd. prévoit d'installer une ligne de galvanisation de 150 000 tpa d'ici 2005. Ornasteel Enterprise Corp. devrait porter sa capacité de laminage à froid à environ 300 000 tpa d'ici

2004. Par contre, un projet de Gunawan Iron and Steel, prévoyant la construction d'un atelier de fusion de 1.35 million tpa équipé d'un haut fourneau de 1.1 million tpa, est au point mort depuis octobre 1999 et ne verra vraisemblablement pas le jour, l'entreprise ayant fait faillite.

La capacité de production d'acier des **Philippines** ne devrait guère varier. National Steel Corp. (NSC), qui avait fermé son aciérie d'Iligan, de 300 000 tpa, pour cause d'endettement depuis novembre 1999, devait la remettre en état pour redémarrer la production, avec le concours de ses investisseurs. Philippine Steel Coating Corp. (PSCC) a différé la mise en service d'une unité de revêtement couleur de 100 000 tpa, installée en 2000 dans son aciérie de Balayan, face au manque de dynamisme de la demande intérieure d'acier.

En **Thaïlande**, Nakomthai Strip Mill prévoit d'investir US\$ 90 dans la modernisation de ses capacités de production d'acier grâce à l'installation, d'ici 2005, d'un four à arc électrique de 300 000 tpa, d'un four à poche, d'une coulée continue de brames minces et d'une ligne de galvanisation de 400 000 tpa. Pour ce qui est des plans d'accroissement des capacités de production en aval, BlueScope Steel, qui appartient au groupe australien BHP, devrait accroître sa capacité de sa ligne de galvanisation pour la porter de 200 000 à 375 000 tpa en 2005. Sahaviriya Steel Industries Public Co. prévoit d'installer d'ici 2005 un laminoir à bandes à chaud de 2 millions tpa dans son aciérie de Bang Saphan.

Au **Taipei chinois**, Chien Shing Stainless Co. prévoit de construire en 2004 une unité intégrée d'acier inoxydable de 600 000 tpa dans son aciérie de Tainan. La nouvelle unité comprendra deux fours à arc électrique, un four à poche, une coulée continue de billettes, un laminoir à bandes à chaud et un laminoir à froid. Feng Hsing Iron and Steel Co. Ltd. devrait installer dans son aciérie en 2004 un four à arc électrique de 400 000 tpa, un four à poche et une coulée continue de billettes de 400 000 tpa. Kuei Yi Industrial Corp. prévoit de construire dans son aciérie de Taichung une nouvelle unité de production d'acier pour porter sa capacité, de 1 million tpa à de 3.5 millions tpa. Le plan d'expansion prévoit l'installation d'un haut fourneau, d'un convertisseur LD, d'une coulée continue de brames, d'une capacité respective de 1.5 million tpa. L'étude de faisabilité technique pour la mise en œuvre de ce plan est menée par China Steel Corp., qui détient 30 % du capital de Kuei Yi Industrial Corp. Tung Ho Steel Enterprise construit, dans son aciérie de Miao-Li, un nouvel atelier de fusion comprenant un four à arc électrique de 645 000 tpa et une nouvelle coulée de billettes/brames de 1 million tpa.

Yieh United Steel Corp. (YUSCO) du Groupe Yieh Loong prévoit de construire d'ici 2005 une nouvelle aciérie de 400 000 tpa dans la province de Guandong pour accroître sa capacité de production d'acier en amont et doter son aciérie de Kaohsiung d'un laminoir à bandes à froid en acier inoxydable.

Au **Pakistan**, Pakistan Steel Mills Corp. (PSM) prévoit de porter sa capacité de production d'acier de 1.1 million tpa à 3 millions tpa, en investissant 1.6 milliard d'USD dans la modernisation de ses installations actuelles. PSM a obtenu l'agrément des autorités pakistanaises.

Plusieurs projets de construction de mini-aciéries sont attendus au **Vietnam**. Vietnam Steel Corp. (VSC) procède à des travaux d'accroissement des capacités dans chacune de ses aciéries. Un plan prévoyant la mise en service en 2005 son aciérie située dans la province de Ba Ria Vung Tau d'un four à arc électrique de 100 000 tpa et de deux coulées continues de billettes de 500 000 tpa chacune suit son cours. VSC prévoit aussi de construire d'ici 2005 une mini-aciérie équipée d'un four à arc électrique de 500 000 tpa et d'une coulée continue de billettes de 500 000 tpa. Vina Kyoei Steel, entreprise commune de VSC et du fabricant japonais de produits longs Kyoei Steel, prévoit d'installer d'ici 2005 un four à arc électrique et une coulée continue de billettes de 350 000 tpa chacun.

Tableau 1. Capacité de production d'acier brut dans les économies non membres de l'OCDE

En millions de tonnes par an

	1994	1996	1998	2000	2002	2005	Taux de croissance

ERRATA

Au cours de la préparation de la publication quelques erreurs se sont glissées qui n'ont pu être corrigées à temps avant l'impression. Ces erreurs sont les suivantes :

- L'Afghanistan s'est glissé au Moyen Orient au lieu d'être placé en Asie ;
- Chypre est placé au Moyen Orient au lieu d'être dans les « Autre Europe » ;
- L'Estonie est située dans les Pays d'Europe centrale et orientale au lieu d'être dans les N.E.I.

Nous vous prions de bien vouloir nous excuser pour ces quelques erreurs qui seront corrigées lors de la prochaine édition.

NOTES SUR L'APPENDICE

Méthodologie

Aux fins d'estimation des capacités d'acier dans les économies non membres de l'OCDE en l'an 2005, les différents projets d'expansion de ces pays ont été classés en trois catégories : « ferme », « possible » ou « peu probable », selon qu'ils devraient être mis en route ou achevés d'ici l'an 2005. Les projets ont été classés en fonction des critères suivants :

- Stade actuel d'avancement de chaque projet – étude de faisabilité, planification autorisation officielle, appel d'offres, exécution ou arrêt, des travaux de construction.
- Disponibilité des ressources financières nécessaires pour chaque projet.
- Taille du marché intérieur de l'acier, telle qu'elle ressort de la consommation apparente d'acier.
- Intention de créer une industrie sidérurgique et/ou de la développer.
- Offre de matières premières et d'énergie.

Les possibilités d'achèvement d'ici l'an 2005 des différents projets étudiés ont été évaluées au regard des critères mentionnés ci-dessus. Si les informations sur un certain nombre d'aspects faisaient assez souvent défaut, les chiffres indiqués dans les tableaux sont considérés comme exacts, en fonction des sources d'informations consultées et des données disponibles. Le classement des projets et les commentaires formulés sur leur état d'avancement n'expriment, en aucun cas, un jugement de valeur sur l'opportunité ou la faisabilité des projets.

Ont été classés dans la catégorie « ferme » les projets qui sont en cours de réalisation ou pour lesquels des contrats ont été attribués, ont fait l'objet d'engagement majeurs sur le plan financier ou au niveau officiel et qui devraient, selon le calendrier d'exécution des travaux, être terminés d'ici 2005. Ont été classés dans la catégorie « possible », les projets qui sont en cours de réalisation ou pour lesquels les contrats ont été attribués, mais qui ont été retardés par des problèmes d'ordre financier ou technique et qui ne devraient pas être achevés d'ici 2005. Ont été classés dans la catégorie « peu probables », les projets qui en sont au stade des études de faisabilité ou au premier stade de la planification et n'ont pas encore mobilisé de ressources financières ou de soutien l'Etat, de même que les projets qui devraient être terminés après 2005. Dans l'Appendice, ces projets sont signalés dans la colonne des « commentaires » et dans certains cas, présentés entre crochets dans la colonne « accroissement des capacités », mais ne sont pas pris en compte dans les estimations des capacités de production d'acier en 2005.

L'estimation des capacités en 2005 a été obtenue, pour chaque pays, en ajoutant à ses capacités actuelles, les capacités des projets « fermes » + la moitié des capacités de tous les projets classés dans la catégories « possible » pour ce pays. Il a été décidé de tenir compte de la moitié seulement de la capacité totale des projets classés « possible » plutôt que de procéder à une évaluation plus précise de chaque projet.

NOTES EXPLICATIVES

Les signes et abréviations utilisés sont les suivants :

BF	Haut fourneau : - au charbon de bois - au coke - mini
EPIF	Four électrique fonte
Corex	Unité de réduction directe utilisant le procédé Corex
DR	Unité de réduction directe, procédés: - Codir - Finmet - Fior - HYL - Krupp - Midrex - Plasma - SLRN
IC	Iron Carbide
LF	Four à poche
OH	Four Martin
LD	Convertisseur LD à l'oxygène pur
BS	Convertisseur Bessemer basique
EF	Four à arc électrique, dont: - DC
EOF	Four à optimisation énergétique
Steelmkg	Unité de fabrication d'acier non spécifiée
CAPL	Ligne de recuit et de décapage, en continu
CC	Machines de coulée continue utilisées pour fabriquer des: - brames Brames minces - blooms - billettes - billettes rondes
SLM	Train à brames
BLM	Train à blooms
BTM	Train à billettes
WR	Train à fil-machine
STR	Train à barres, à profilés, à poutrelles ou à cornières
Plate	Train à tôles fortes
Hot	Train à bandes à chaud
SMLS	Train à tubes sans soudure
Cold	Train à bandes à froid
HGL	Ligne de galvanisation par immersion à chaud
EGL	Ligne d'électrogalvanisation
ZnAl	Ligne de revêtement zinc/aluminium
Tin plate	Tôles étamées
Ptg	Ligne de revêtement couleur
ERW	Unité de fabrication de tubes soudés à résistance électrique
Rolling	Laminoir non précisé

Les chiffres des capacités correspondent à des capacités nominales ou théoriques. Sauf indication contraire, ces chiffres sont exprimés en milliers de tonnes par an.

Les chiffres indiqués pour la « capacité existante » et les « équipements actuels » correspondent aux estimations établies fin décembre 2002.

Les chiffres sur les capacités indiqués dans le présent rapport ont été estimés sur la base les informations disponibles les plus fiables. Toutefois, les sources d'informations étant limitées, bon nombre des chiffres cités correspondent aux capacités nominales ou théoriques. Dans certains cas cependant, les chiffres sur les capacités nominales ont été modifiés au vu des chiffres de la production effective ou des objectifs des projets de modernisation.

La colonne « origine des capitaux » distingue les entreprises ou projets d'État (S) des entreprises ou projets du secteur privé (P).

L'origine des informations est précisée dans la colonne « sources ». Les chiffres indiqués sur les capacités ne sont pas nécessairement identiques aux estimations tirées de ces sources. Les abréviations utilisées dans la colonne « sources » sont les suivantes :

SONASID has already placed an order with Danieli for the design and construction of a new flexible bar and section mill at Jorf Lasfar, south of Casablanca. The 400 000 tpy mill is currently being constructed by Danieli. The existing reinforcing bar mill will be closed one or two years after commercial start-up of the new mill. Meanwhile, SONASID is reportedly planning to install a 600 000 tpy electric arc furnace at its Jorf Lasfar by 2004.

In the middle of 2000, Bulgarian metals trader Daru Metals acquired a 71% stake in Kremikovtzi Iron and Steel Works from the Bulgarian Government. Daru plans to invest EUR 133 million by the middle of 2004 as well as paying large debts. The company is reportedly discussing plans for a joint venture with VAI of Austria to upgrade and manage the steel-casting units at the plant. A plan to build a 1.6 million tpy continuous caster is reportedly under construction.

Country:	BULGARIA								

The company closed its blast furnaces and open hearth furnaces in 1991, and is operating only its electric furnaces. The privatisation of Stomana has been under way. Although Daru Metals and Dufurco are interested in the bid, the sale of Stomana, which is in the middle of an insolvency procedure, has reportedly become less likely. The company has likely plans to upgrade the electric arc furnaces and revamp the bloom and slab casters, plate mill and long product rolling mill by 2004.

CSN plans to build a 1.2 million tpy mini-mill in north-eastern Ceara State. However, the lack of investment in the new mini-mill will reportedly delay its completion of its first phase, originally scheduled for 2001. The first phase of building the mini-mill plant includes a USD 350 million investment to build a meltshop, thin slab caster and 1.2 million tpy hot-strip mill. According to the news sources, the investment budgeted for 2000 does not include funds to begin the construction of the mini-mill. The USD 150 million second stage of this mini-mill project reportedly includes the construction of a 360 000 tpy cold-rolling and a 240 000 tpy galvanizing line. The company plans to modernize its tinplate lines in order to raise the capacity from 35 000 tpy to 180 000 tpy in 2005.

CSN plans to construct a new steel mill to produce at most 6-million tpy of slabs for exports. The new mill will be constructed in Itaguai, in the south-eastern area of Rio de Janeiro state. This project is linked to the company's plan to acquire a US rolling mill to transform slabs into high value-added products. The new mill is expected to come on stream by 2003-04.

The Italian plantmaker Danieli and Venezuela's CVG has signed a protocol for building a new direct reduced iron-based steel complex, Qualimetal in October 2002. Qualimetal is likely to expand its capacity to 1.5 million tpy by 2005 in order to produce interstitial-free slab and carbon slab for special steel in the Guayana region of Venezuela.

CVG Siderurgica del Orinoco CA (SIDOR) is currently proceeding with an investment programme totalling USD 180 million. However, start-up of works to boost SIDOR's crude steel production capacity by 2.4 million tpy to almost 6 million tpy has been delayed until 2004. SIDOR is controlled by Consorcio Amazonas, which bought a 70% stake in SIDOR from the Venezuelan government in late 1997. The consortium includes Argentina's Techint, Mexico's Hylsamex SA de CV, Brazil's Usiminas and Venezuela's Siderurgica Venezolana SA (SIVENSA).

Al-Ittefaq, wholly owned by Hilal Al-Turwairqi, is reportedly working on proposals to build a new 850 000 tpy electric arc furnace in the second half of 2005. The company currently operates 750 000 tpy rolling mills producing deformed bars, angles, square and round bars and a wire rod mill. The new meltshop and continuous billet casting machine are expected to be built close to its rolling mills. The installation of a new 300 000 tpy rebar mill is under construction at its works.

Russian leading steelworks are currently vying for a USD 1 billion project known as Mill-5000 to produce large diameter pipes. The plant is to be built in Nizhny Tagil. The plant is operated by OAO Zavod TBD, a company established by the Russian state, Nizhny Iron and Steel, Gazprom and Switzerland-based steelmaker Duferco. The plate mill will have a capacity of 1 million tpy while the pipe mill will have an annual capacity of 600 000 tonnes of straight bead welded coated pipe. The pipe mill will be designed and built by the tube and copper plant division of German's SMS Demag AG. The new plant is reportedly due to come on stream in 2004.

Seversky Tube Works reportedly intends to modernize the existing steelmaking facilities with the investment of USD 15 million by installing a new ladle furnace and a bloom caster to feed the new seamless mil. The new equipment is expected to raise seamless tube capacity from 320 000 tpy to 550 000 tpy.

Severstal is reportedly planning to construct a new 400 000 tonnes/year galvanizing plant in Cheropovets by 2004. The new plant will be owned 75% by Severstal and 25% by Usinor, France and this joint venture is called "Severgal". This plant is scheduled to complete in 2004. The company also plans to install a new 200 000 tpy coating line for automobiles industry. According to the source, Severstal intends to invest USD 50 million to expand the facilities of pipe production in 2004.

Shanghai Baoshan Iron & Steel Group Co. (Baosteel) plans to invest USD 30 million to establish a joint venture with Arcelor, aiming at producing tailor welded blanks for bisk demand from automobile industry by 2004. The new plant will be equipped with an annual capacity of 2 million tpy as the initial phase of the construction. Baoshan Iron and Steel Co. also plans to install a 1.7 million tpy cold rolling mill and a hot dip galvanizing mill at its Shanghai steelworks through an establishment of a joint venture with Nippon Steel and Arcelor. The installation of new rolling facilities is under construction and expected to be completed by May 2005. The company reportedly also plans to install a 450 000 tpy hot-dip galvanizing line and a 900 000 tpy continuous annealing and picking line supplied by Nippon Steel and a 350 000 tpy CGL supplied by JFE Steel by mid-2005. Baoshan reportedly intends to expand CGL capacity with a new 200 000 tpy CGL mill by September 2004 in due to meet an expecting construction demand for coming 2008 Olympic boom in Beijing. According to the news source, Shanghai Baosteel Group has reached an agreement to establish an automotive sheet joint venture with Nippon Steel of Japan at Baosteel's flagship Baoshan works. An automotive joint venture reportedly intends to install a new 180 000 tpy cold rolling mill and a 45 000 tpy continuous galvanizing line by mid-2005.

Shanghai Baoshan Iron & Steel Group Co. (Baosteel) is planning to build a new stainless steel plant at its Shanghai No 1 Iron & Steel Works. The company is expected to install a 720 000 tpy meltshop and a continuous slab caster, which are scheduled to be commissioned in 2005. The company plans to expand the slab casting capacity to 2.3 million tpy in 2005 from its current 900 000 tpy. Also the company is planning to install a 2.8 million tpy hot strip mill and a 1.3 million tpy stainless cold-rolling mill in 2004. According to the source, the company unveiled the expansion project and intends to install two new 150-tonne converters with a capacity of 2.23 million tpy. This project is scheduled to be completed by March 2004.

Taiyuan Iron and Steel (Group) Co. (Taigang) reportedly has a plan to expand its cold rolling capacity for stainless steel production with the installation of two new Sendzimir type cold rolling mills, which were already awarded to the French engineering company DMS. In this regard, the company plans to install a 240 000 tpy annealing and pickling line by 2005. In addition to the expansion plan of cold rolling mills, the company reportedly has received a USD 113 million loan from Japan for its plant overhaul mainly to reduce emissions and pollution. The company also intends to purchase a new 90-tonne electric arc furnace with an allowance for the loan, aiming at updating the existing six electric arc furnaces.

Zhangjiagang Pohang Stainless Steel is one of the largest CR stainless sheet producers in China. The company was jointly established by Jiangsu Shagang I/S (Group) Co. Ltd., and POSCO after the approval of the Chinese State Council. The company reportedly plans to build a 600 000 tpy steel plant comprising of a meltshop, a continuous caster and a rolling mill at its works in Jiangsu in 2006.

negotiations with Chiao Tong Bank of Chinese Taipei to secure funding for the new plant. After the completion of construction, Chien Shing will be the second integrated stainless steel plant with an annual production capacity of 600 000 tonnes of hot and cold rolled stainless steel. The new plant initially is expected to come on stream by mid-2002, however, the expansion plan could be delayed until 2004. According to the source, the installation of a new stainless plant is comprised of two electric arc furnaces, a ladle furnace, a continuous billet caster and a 500 000 tpy 14-stand bar mill.

China Steel Corp. (CSC) plans to install a new 200 000 tpy cold strip mill for silicon steel product and its start-up is scheduled for 2004. The company reportedly intends to purchase a 120 000 tpy plate mill from the Japanese mill. In addition to install a plate mill, the company is planning to raise pig iron production capacity from 1.7 million tpy to 2 million tpy in 2005 through a reline of its No.2 blast furnace. CSC also plans to install a ladle furnace and to revamp the No.4 and No.5 continuous slab casters by the end of 2005. In January 2004, the company has awarded a contract to German plantmaker for supplying a new 900 000 tpy annealing line at its works. According to the news source, CSC is under investigation for two possible locations for the proposed massive integrated steel plant in Chinese Taipei.

Jindal Steel & Power Ltd is reportedly planning to install a 250 000 tpy mini blast furnace, a 250 000 tpy beams mill and a 750 000 tpy rail and structural mill at its works in New Delhi. Coal-based direct reduction plant with a capacity of 1 million tpy also is reportedly planning on greenfield site in Orissa state. According to the source, the company is aiming at increasing the capacity of hot briquetted iron up to 1.33 million tpy by 2005.

According to the news source, Jindal Strips Ltd plans to construct a stainless steel plant with a 1.6 million tpy meltshop in Orissa. The new plant will comprise of a blast furnace, a steel meltshop with capacity of 1.6 million tpy, a 400 000 tpy cold rolling mill, a hot strip mill, an annealing and pickling line. The construction of installing these steelmaking facilities is scheduled to be completed in 2005 and 2006.

Tata Iron & Steel Co. has an ambitious expansion plan to construct a 10 million tpy steel plant at Gopalpur in India.

Tata Iron & Steel Co. (TISCO) is reportedly going to expand steelmaking capacity to 5.5 million tpy at its works in Jamshdepur in 2005. TISCO also intends to install a new 600 000 tpy bar mill, which will be supplied by Morgan Construction Co. The start up of production is scheduled for May 2005.

The company was formerly known as Krakatau Hoogovens International Pipe Industries. PT KHI Pipe Industries, PT Krakatau Steel's pipemaking subsidiary, is planning to install a new 70 000 tpy spiral welded pipe mill at its mill in West Java by the end of 2004.

PT Krakatau Steel is currently in the process of securing finance for a series of upgrades costing at least USD 350 million. This expansion plan includes the installation of a new direct reduction (DR) unit which will lift the ironmaking capacity to over 3 million tpy, a new 900 000 tpy electric arc furnace, a continuous slab caster and continuous billet and bloom casters. The company also intends to boost its cold rolling capacity to 850 000 tpy from 200 000 tpy by 2004. In addition to these expansion plans, the company is also exploring the option of raising crude steelmaking capacity to 4.5 million tpy by 2007 with the establishment of HBI based meltshop.

According to the news source, Pakistan's Government endorsed an expansion and modernisation programme for Pakistan Steel Mills Corp (PSM) that would boost capacity to 3.1 million tpy from 1.1 million tpy by 2007. The company also intends to install a 200 000 cold strip mill and expand the existing capacity of hot rolling mill and galvanising mill. In addition to these expansion plans, Saudi Arabia's Al-Tuwairqi Group is reportedly planning to build a new 1 million tpy direct reduction iron unit based steel plant equipped with a billet mill on the site of Pakistan Steel.

According to the news source, Vietnam Steel Corporation (VSC) plans to construct a new 4.5 million tpy integrated steel plant in the Thach Ke district of Ha Tinh province, Vietnam. The plant will be comprised of a blast furnace, two electric arc furnaces, a continuous slab caster and a hot rolling mill. VSC has already completed a pre feasibility study for construction of the new plant, undertaken by the Japanese steel company. The project is expected to start up at early 2004.

Questionnaire on the quality of OECD publications

We would like to ensure that our publications meet your requirements in terms of presentation and editorial content. We would welcome your feedback and any comments you may have for improvement. Please take a few minutes to complete the following questionnaire. Answers should be given on a scale of 1 to 5 (1 = poor, 5 = excellent).

Fax or post your answer before 31 December 2004, and you will automatically be entered into the prize draw to **win a year's subscription to *OECD's Observer magazine*.***

A. Presentation and layout

1. What do you think about the presentation and layout in terms of the following:

	Poor	Adequate	3	4	Excellent
Readability (font, typeface)	1	2	3	4	5
Organisation of the book	1	2	3	4	5
Statistical tables	1	2	3	4	5
Graphs	1	2	3	4	5

B. Printing and binding

2. What do you think about the quality of the printed edition in terms of the following:

Quality of the printing	1	2	3	4	5
Quality of the paper	1	2	3	4	5
Type of binding	1	2	3	4	5
Not relevant, I am using the e-book	<input type="checkbox"/>				

3. Which delivery format do you prefer for publications in general?

Print CD E-book (PDF) via Internet Combination of formats

C. Content

4. How accurate and up to date do you consider the content of this publication to be?

1 2 3 4 5

5. Are the chapter titles, headings and subheadings...

Clear Yes No
Meaningful Yes No

6. How do you rate the written style of the publication (e.g. language, syntax, grammar)?

1 2 3 4 5

D. General

7. Do you have any additional comments you would like to add about the publication?

.....
.....
.....

Tell us who you are:

Name: E-mail:

Fax:

Which of the following describes you?

IGO NGO Self-employed Student
Academic Government official Politician Private sector

Thank you for completing the questionnaire. Please fax your answers to:

(33-1) 49 10 42 81 or mail it to the following address:
