ÉTUDE SPÉCIALE :
QUESTIONS ACTUELLES SUR LA
COMPTABILISATION DES RECETTES FISCALES

This work is published on the responsibility of the Secretary-General of the OECD. The opinions expressed and arguments employed herein do not necessarily reflect the official views of the Organisation or of the governments of its member countries.

Cet ouvrage est publié sous la responsabilité du Secrétaire général de l'OCDE. Les opinions et les interprétations exprimées ne reflètent pas nécessairement les vues de l'OCDE ou des gouvernements de ses pays membres.

This document and any map included herein are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area.

Ce document et toute carte qu'il peut comprendre ne préjugent en rien du statut de tout territoire, de la souveraineté s'exerçant sur ce dernier, du tracé des frontières et limites internationales, et du nom de tout territoire, ville ou région.

The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

Les données statistiques concernant Israël sont fournies par et sous la responsabilité des autorités israéliennes compétentes. L'utilisation de ces données par l'OCDE est sans préjudice du statut des hauteurs du Golan, de Jérusalem-Est et des colonies de peuplement israéliennes en Cisjordanie aux termes du droit international.

Foreword

This annual publication provides information on tax levels and tax structures in OECD countries. It was prepared under the auspices of the Working Party on Tax Policy Analysis and Tax Statistics of the Committee on Fiscal Affairs and is published under the responsibility of the Secretary-General of the OECD.

Avant-propos

Cette publication annuelle fournit des informations sur les niveaux d'imposition et la structure de la fiscalité dans les pays de l'OCDE. Elle a été préparée sous les auspices du Groupe de travail sur l'analyse des politiques et des statistiques fiscales du Comité des affaires fiscales ; elle est publiée sous la responsabilité du Secrétaire général de l'OCDE.

Table of contents

Executive summary	15
Introduction	21
Chapter 1. Tax revenue trends, 1965-2015	25
Introduction	26
1.1. Tax ratio	26
1.2. Tax structures	35
1.3. Taxes by level of government	37
1.4. The impact of GDP revisions on reported tax levels	39
Note	41
Chapter 2. Special feature: Current issues on reporting tax revenues	61
2.1. Introduction	62
2.2. Payable or non-wastable tax credits	62
2.3. The VAT based third EU own resource in ESA 2010	67
2.4. The treatment of revenues from fines and penalties	68
2.5. The classification of profits from fiscal monopolies	69
2.6. An imputed tax resulting from the operation of multiple exchange rate systems.	70
2.7. An imputed tax resulting from the central bank paying a rate of interest that is below other market rates on required reserves	70
2.8. Taxes on financial capital transactions	70
2.9. Conclusion	71
Annex A	72
Annex B	73
Chapter 3. Tax levels and tax structures, 1965-2015	91
3.1. Comparative tables, 1965-2014	92
3.2. Comparative figures, 1965-2014	134
3.3. Estimates of Tax Revenues, 2015	144
Chapter 4. Country tables, 1965-2014	151
4.1. Tax revenues	152
4.2. Financing social benefits	251
4.3. Social security contributions and payroll taxes paid by Government	255
Chapter 5. Tax revenues by subsectors of general government	267
5.1. Comparative figures 2014	269
5.2. Comparative tables 1975, 1995, 2000 et 2014	271
5.3. Country tables, 1975, 1985, 1995, 2005 and 2014	283
Annex A. The OECD classification of taxes and interpretative guide	319
Tables	
1.1. Total tax revenue as % of GDP	27
1.2. Taxes on income and profits as % of GDP	28

1.3. Tax structures in the OECD area	35
1.4. Attribution of tax revenues to sub-sectors of general government as % of total tax revenue	37
1.5. Customs duties collected on behalf of the European Union	39
2.1. Effect of alternative treatments of non-wastable tax credits, 2014.	64
3.1. Total tax revenue as % of gross domestic product at market prices, 2014	94
3.2. Total tax revenue as % of GDP, 1965-2014	95
3.3. Total tax revenue (excluding social security) as % of GDP	100
3.4. Total tax revenue as % of GDP – Three year moving average	101
3.5. Tax revenue of main headings as % of GDP, 2014.	102
3.6. Tax revenue of main headings as % of total taxation, 2014	103
3.7. Taxes on income and profits (1000) as % of GDP	104
3.8. Taxes on income and profits (1000) as % of total taxation	105
3.9. Taxes on personal income (1100) as % of GDP	106
3.10. Taxes on personal income (1100) as % of total taxation	107
3.11. Taxes on corporate income (1200) as % of GDP	108
3.12. Taxes on corporate income (1200) as % of total taxation	109
3.13. Social security contributions (2000) as % of GDP	110
3.14. Social security contributions (2000) as % of total taxation.	111
3.15. Employees' social security contributions (2100) as % of GDP.	112
3.16. Employees' social security contributions (2100) as % of total taxation	113
3.17. Employers' social security contributions (2200) as % of GDP	114
3.18. Employers' social security contributions (2200) as % of total taxation.	115
3.19. Taxes on payroll and workforce (3000) as % of GDP.	116
3.20. Taxes on payroll and workforce (3000) as % of total taxation	117
3.21. Taxes on property (4000) as % of GDP	118
3.22. Taxes on property (4000) as % of total taxation	119
3.23. Taxes on goods and services (5000) as % of GDP	120
3.24. Taxes on goods and services (5000) as % of total taxation	121
3.25. Consumption taxes (5100) as % of GDP	122
3.26. Consumption taxes (5100) as % of total taxation.	123
3.27. Taxes on general consumption (5110) as % of GDP	124
3.28. Taxes on general consumption (5110) as % of total taxation	125
3.29. Taxes on specific goods and services (5120) as % of GDP	126
3.30. Taxes on specific goods and services (5120) as % of total taxation	127
3.31. Total tax revenue in millions of US dollars at market exchange rates	128
3.32. Tax revenue of individual countries as % of total OECD tax revenue	129
3.33. Tax revenue in US dollars per capita at market exchange rates	130
3.34. Annual % change in total tax revenue.	131
3.35. Gross domestic product for tax reporting years at market prices, in billions of national currency units.	132
3.36. Exchange rates used, national currency per US dollar at market exchange rates	133
3.37. Estimates of tax revenues in billions of national currency units, 2015	146
3.38. Estimates of tax revenues as % of GDP, 2015	148
3.39. Tax revenue of main headings as % of total taxation, 2015	149

3.40. Gross domestic product at market prices, in billions of national currency units	150
4.1. Australia	152
4.2. Austria	154
4.3. Belgium	158
4.4. Canada	161
4.5. Chile	164
4.6. Czech Republic	166
4.7. Denmark	169
4.8. Estonia	173
4.9. Finland	175
4.10. France	178
4.11. Germany	183
4.12. Greece	186
4.13. Hungary	188
4.14. Iceland	192
4.15. Ireland	194
4.16. Israel	196

Executive summary

Tax revenues in OECD countries, measured as a percentage of GDP, increased again in 2015 to a new high of 34.3% on average. This continues the trend of steady increases in tax levels in the period after the financial crisis. Prior to the financial crisis, tax revenues had risen from 33.1% of GDP in 2004 to a pre-crisis peak of 33.8% in 2007, before falling to a low of 32.4% in 2009.

Taxes are defined in this publication as compulsory, unrequited payments to general government. Taxes are unrequited in that benefits provided by governments to taxpayers are not normally allocated in proportion to their payments. Taxes are classified by their base: income, profits and capital gains; payroll; property; goods and services; and other taxes. Compulsory social security contributions paid to general government are also treated as taxes. Revenues are also analysed by level of government: federal or central; state; local; and social security funds. Detailed information on the classifications can be found in the Interpretative Guide in Annex A of this report.

Tax levels in 2015

Between 2014 and 2015, the OECD average tax to GDP ratio increased from 34.2% in 2014 to 34.3% in 2015, despite large falls in the tax to GDP ratio in two countries. This is the sixth consecutive increase, and means that the OECD average tax to GDP level is, again, the highest in the fifty-year period covered by *Revenue Statistics*. OECD average tax levels have now exceeded pre-crisis levels since 2012.

An increase in tax to GDP ratios from 2014 to 2015 is also observed in 25 of the 32 countries for which preliminary 2015 data is available. In 23 countries, tax revenues increased at a faster rate than GDP, but in Greece and Switzerland, GDP growth was negative. The increase was largest in Mexico, due to higher revenues from taxes on income and on goods and services, and increases were above one percentage point in five other countries. Only seven countries experienced a decrease in tax to GDP ratios in 2015, relative to 2014. The decrease was sharpest in Ireland, where exceptional nominal GDP growth of over 30% led to a decrease of tax to GDP levels of over 5 percentage points. The tax to GDP ratio in Denmark decreased by 3.0 percentage points, driven by a correction from unusually high income tax revenues in 2014. Decreases of more than one percentage point were also seen in Iceland and in Luxembourg. In 2015, eighteen OECD countries reported tax to GDP ratios higher than those in 2007; among the remaining 14 countries that provided provisional information for 2015, all but Iceland, Ireland and Norway saw increased tax to GDP levels between 2014 and 2015.

Tax structure in 2015

The tax structure continues to evolve slowly after the global financial crisis. Revenues from income taxes have increased since 2010 (the lowest point following the crisis) to 11.6% of GDP but have not again reached their high point of 12.2% of GDP in 2007, prior to

the crisis. Within this category, corporate income tax revenues have not grown at the same rate as personal income tax revenues, shifting more of the burden of income taxation toward households. Since 2011, the share of corporate income taxes to GDP has remained relatively steady at around 2.9%, while the share of personal income taxes has increased from 7.8 to 8.5% of GDP.

Following a notable increase between 2007 and 2009, social security contributions remained relatively constant in 2014 and 2015 at just over 26% of total tax revenue and 9.1% of GDP on average. Similarly, the OECD average shares of property, payroll and unspecified taxes also remained stable.

Revenues from taxes on goods and services were 10.8% of GDP from 2002 to 2005 and decreased to 10.3% in 2009, their lowest point following the crisis. Since then, revenues from taxes on goods and services have returned to pre-crisis levels, notwithstanding a small decline 2014 and 2015 from 11% to 10.9%. Revenues from VAT are increasing since 2009 and were 6.8% of GDP on average in 2015. At the same time, revenues from taxes on specific goods and services, notably excises, have been decreasing as a share of GDP and represented 3.2% on average in the OECD in 2015.

Intra-country deviations from the OECD average were typically small in the latest years covered by this report (changes from 2013 to 2015). Among the 32 countries who reported provisional data for 2015:

- Twenty-two countries had higher shares of personal income tax revenues to GDP in 2015 relative to 2013, with an average increase across the OECD of 0.2 percentage points. Only Ireland had a decrease of more than one percentage point, owing to the large increase in its GDP in 2015.
- Eighteen countries experienced an increase in corporate income tax revenues as a percentage of GDP, with changes in all countries, except for Norway, falling within the range of -0.5 to 0.8 percentage points. Corporate income tax levels in Norway decreased by nearly 4 percentage points. The OECD average did not change.
- VAT increased as a share of GDP in 20 countries and on average across the OECD by 0.2 percentage points. The strongest increase in VAT revenues was seen in Japan (1.6 percentage points, following their VAT rate increase) and the greatest fall, except for Ireland, was in Luxembourg, of 0.7 percentage points.
- The share of social security contributions and property taxes each increased by less than 0.1 percentage point on average, with a similar decrease for other goods & services taxes, with no significant outlying countries.

Changes by level of government

Tax revenues at different levels of government remained relatively stable in 2014 relative to 2013, both on an OECD average basis and in individual countries. The federal share of revenues in 2014 remained at 53% of general government revenue in federal countries and at 64% in unitary countries. In federal countries, 24% of revenues were received at subnational level on average (ranging from 5% in Austria to 40% in Switzerland), with on average two-thirds of revenues being received by state governments and one-third by local governments. In unitary countries, the share of local government revenues was 12%, ranging from 1% in the Czech Republic and Estonia to 37% in Sweden.

Résumé

Les recettes fiscales dans les pays de l'OCDE, mesurées en pourcentage du PIB, ont de nouveau augmenté en 2015 pour atteindre 34.3 % en moyenne, niveau sans précédent. Cette augmentation est dans la continuité de l'évolution de la pression fiscale dans la période qui a suivi la crise financière. Avant la crise, les recettes fiscales étaient passées de 33.1 % du PIB en 2004 à un niveau record de 33.8 % en 2007, avant de retomber à un point bas de 32.4 % en 2009.

Dans cette publication, les impôts désignent les versements obligatoires sans contrepartie aux administrations publiques. Les impôts sont sans contrepartie car les prestations fournies par les administrations aux contribuables ne sont pas normalement proportionnelles à leurs paiements. Les impôts sont ventilés en fonction de l'assiette : revenu, bénéfiques et gains en capital ; salaires ; patrimoine ; biens et services ; et autres impôts. Les cotisations obligatoires de sécurité sociale versées aux administrations publiques sont aussi traitées comme des impôts. Les recettes sont également analysées par niveau d'administration : État fédéral ou administration centrale, administration d'un État fédéré, administrations locales et caisses de sécurité sociale. Le Guide d'interprétation à l'Annexe A du présent rapport contient des informations plus détaillées sur la classification des impôts.

Niveaux d'imposition en 2015

Entre 2014 et 2015, le ratio moyen des recettes fiscales rapportées au PIB dans la zone OCDE a progressé de 34.2 % à 34.3 %, malgré une forte baisse de ce ratio dans deux pays. Il s'agit de la sixième hausse consécutive, avec pour conséquence que le ratio moyen dans les pays de l'OCDE n'a jamais été aussi élevé au cours des cinquante années couvertes par les *Statistiques des recettes publiques*. Depuis 2012, les niveaux moyens d'imposition dans la zone OCDE dépassent ceux d'avant la crise.

On constate également une augmentation du ratio des recettes fiscales au PIB entre 2014 et 2015 dans 25 des 32 pays pour lesquels des données préliminaires pour 2015 sont disponibles. Dans 23 pays, les recettes fiscales ont augmenté plus vite que le PIB, mais en Grèce et en Suisse, le PIB a diminué. C'est au Mexique que la hausse a été la plus forte, sous l'effet de la progression des recettes générées par les impôts sur le revenu et sur les biens et services, tandis que les hausses ont dépassé un point de pourcentage dans cinq autres pays. Sept pays seulement ont vu leur ratio des recettes fiscales au PIB diminuer en 2015 par rapport à 2014. La baisse a été la plus marquée en Irlande, où la croissance exceptionnelle du PIB nominal, de plus de 30 %, a entraîné un recul du ratio de plus de 5 points de pourcentage. Au Danemark, le ratio des recettes fiscales au PIB a cédé 3.0 points de pourcentage, sous l'effet d'une correction de recettes de l'impôt sur le revenu inhabituellement élevées en 2014. Des baisses de plus d'un point se sont également

produites en Islande et au Luxembourg. En 2015, 18 pays de l'OCDE affichaient des taux d'imposition supérieurs à ceux de 2007 ; tous les 14 pays restants qui ont communiqué des informations provisoires pour 2015, sauf l'Irlande, l'Islande et la Norvège, ont vu ce taux augmenter entre 2014 et 2015.

Composition des recettes fiscales en 2015

La structure fiscale change progressivement après la crise financière mondiale. Les recettes provenant des impôts sur le revenu ont augmenté depuis 2010 (le point bas après la crise) pour s'établir à 11.6 % du PIB, mais n'ont pas renoué avec leur point haut de 12.2 % du GDP en 2007, avant la crise. Dans cette catégorie, les recettes de l'impôt sur les bénéfices des sociétés n'ont pas progressé au même rythme que celles de l'impôt sur le revenu des personnes physiques, entraînant un alourdissement de la charge fiscale supportée par les ménages. Depuis 2011, la part des impôts sur les bénéfices des sociétés dans le PIB est restée relativement stable à environ 2.9 %, tandis que celle des impôts sur le revenu des personnes physiques est passée de 7.8 % à 8.5 % du PIB.

Après une forte augmentation entre 2007 et 2009, les cotisations de sécurité sociale sont restées relativement constantes en 2014 et 2015, à un peu plus de 26 % du total des recettes fiscales et 9.1 % du PIB en moyenne. De même, en moyenne dans les pays de l'OCDE, les parts des impôts sur le patrimoine, sur les salaires et des autres impôts sont également restées stables.

Les recettes des impôts sur les biens et services représentaient 10.8 % du PIB de 2002 à 2005, avant de se replier à 10.3 % en 2009, leur point bas après la crise. Depuis lors, elles ont retrouvé leur niveau d'avant la crise, malgré une légère baisse de 11 % à 10.9 % entre 2014 et 2015. Les recettes de TVA augmentent depuis 2009, et s'établissent à 6.8 % du PIB en moyenne en 2015. Dans le même temps, les recettes des impôts sur les biens et services déterminés, notamment les accises, ont reculé en pourcentage du PIB, et représentaient 3.2 % en moyenne dans l'OCDE en 2015.

Les écarts propres aux différents pays par rapport à la moyenne de l'OCDE étaient généralement faibles au cours des dernières années couvertes par ce rapport (variations entre 2013 et 2015). Parmi les 32 pays qui ont communiqué des données provisoires pour 2015 :

- La part des recettes de l'impôt sur le revenu des personnes physiques dans le PIB était plus élevée en 2015 qu'en 2013 dans 22 pays, avec une hausse moyenne de 0.2 point dans la zone OCDE. Seule l'Irlande a enregistré une baisse supérieure à un point, sous l'effet de la forte progression de son PIB en 2015.
- La part des recettes de l'impôt sur les bénéfices des sociétés dans le PIB s'est accrue dans 18 pays avec une variation de -0.5 à 0.8 point dans tous les pays sauf la Norvège, qui a enregistré une diminution de cette part de près de 4 points. La moyenne de la zone OCDE n'a pas changé.
- La part des recettes de TVA dans le PIB a augmenté dans 20 pays et de 0.2 point dans la zone OCDE en moyenne. La plus forte hausse des recettes de TVA s'est produite au Japon (1.6 point, sous l'effet du relèvement du taux de TVA intervenu dans ce pays), tandis que la baisse la plus marquée, hormis l'Irlande, a concerné le Luxembourg (-0.7 point).
- Les parts respectives des cotisations de sécurité sociale et des impôts sur le patrimoine dans le total des recettes fiscales ont progressé de moins 0.1 point en moyenne, tandis que la part des autres impôts sur les biens et services a diminué dans des proportions similaires, aucun pays ne se démarquant sensiblement de cette tendance.

Variations par niveau d'administration

La répartition des impôts par niveaux d'administration est restée relativement stable en 2014 par rapport à 2013, à la fois en moyenne dans l'OCDE et dans les différents pays. En 2014, la part des recettes de l'administration fédérale représentait 53 % du total des recettes des administrations publiques dans les pays fédéraux, et 64 % dans les pays unitaires. Dans les pays fédéraux, 24 % des recettes étaient perçues par les administrations infranationales en moyenne (dans un intervalle compris entre 5 % en Autriche et 40 % en Suisse), les deux tiers des recettes en moyenne revenant aux administrations des états fédérés et un tiers aux collectivités locales. Dans les pays unitaires, la part des recettes perçues par les collectivités locales s'établissait à 12 %, l'éventail allant de 1 % en République tchèque et en Estonie à 37 % en Suède.

Introduction

The purpose of this annual publication is to provide internationally comparative data on tax levels and tax structures in member countries of the OECD. The taxes imposed in each country are presented in a standardised framework based upon the OECD classification of taxes and its Interpretative Guide as contained in Annex A to this Report.

Starting in 2004, the data for recent years in this publication are mainly reported on an accrual basis, rather than the cash basis that has been used in previous editions. The reasons for this change were discussed in Special Feature S.2 of the 2003 edition. Details of the practical implementation of this change were given in Special Feature S.1 of the 2004 edition.

The criteria followed for the grouping of taxes are not affected by this change to accrual reporting and are primarily the basis on which a tax is charged and secondly whether households or other entities pay the tax. Borderline classification cases, where definitional issues and other difficulties arise, are noted in the Interpretative Guide. Footnotes which accompany the country tables in Chapter 4 record where countries deviate from the guidelines.

The data for the Report has, for the most part, been provided by Delegates to Working Party No. 2 on Tax Policy Analysis and Tax Statistics of the Committee on Fiscal Affairs. The OECD acknowledges the co-operation of the International Monetary Fund, whose classification of tax revenues – although in a number of respects less detailed – is in many respects similar to that of the OECD.¹ The most important of the other classifications currently in use is the System of National Accounts (henceforth referred to as SNA) and the European System of Integrated Economic Accounts of EU member states (henceforth referred to as ESA), which is primarily an elaboration of SNA, though differing from it in certain respects. Subject to a few exceptions, SNA/ESA figures can be reconciled with the figures in the present Report, since SNA criteria and definitions have been adopted unless the contrary is specifically indicated.

The material is organised in five chapters. Chapter 1 summarises tax trends of the past 50 years focusing in turn on tax levels (Section 1.1), tax structures (Section 1.2) and taxes by level of government (Section 1.3). Section 1.4 discusses the impact of GDP revisions. This year's issue also carries in Chapter 2 a special feature on "Current issues on reporting tax revenues". Chapter 3 contains a set of comparative statistical tables for years 1965-2014 (Section 3.1) and a series of comparative graphs which show the differences between countries as regards tax levels and tax structures (Section 3.2). Estimates of 2015 tax revenues are presented in Section 3.3 for all countries for which such data are available. Chapter 4 provides statistical tables with a detailed breakdown of tax revenues by country for years between 1965 and 2014 (Section 4.1).² A second series of tables shows how countries finance their social benefits (Section 4.2), followed by a series

of tables detailing taxes and social security contributions paid by general government (Section 4.3). Chapter 5 attributes tax revenues to general government by the following sub-sectors: central, state; local and social security funds. It contains a series of comparative graphs which show the differences between countries as regards tax structures (Section 5.1), a set of comparative statistical tables for years 1975-2014 (Section 5.2) and a second series of tables with a detailed breakdown of tax revenues by country for years between 1975 and 2014 (Section 5.3).

Notes

1. See IMF (2014), *Government Finance Statistics Manual 2014*, International Monetary Fund, Washington, DC.
2. Because of space limitations, data are shown for selected years between 1965 and 2014. Data for years not shown are available online.

Introduction

Le but de cette publication annuelle est de présenter des données permettant d'effectuer des comparaisons internationales sur les niveaux d'imposition et la structure de la fiscalité dans les différents pays membres de l'OCDE. Les impôts perçus dans chaque pays sont présentés sous une forme normalisée selon le modèle de classification des impôts de l'OCDE et son guide d'interprétation qui figure à l'Annexe A de ce rapport.

À partir de l'année 2004, les données de cette publication concernant les années récentes sont surtout enregistrées sur la base des droits constatés et non plus sur la base des décaissements qui était utilisée pour les éditions précédentes. Les motifs de ce changement ont été examinés dans l'Étude spéciale S.2 de l'édition de 2003. On trouvera des précisions sur l'application pratique de ce changement dans l'Étude spéciale S.1 de l'édition 2004.

Les critères retenus pour la classification des impôts ne sont pas affectés par cette adoption de l'enregistrement sur la base des droits constatés et sont constitués essentiellement par l'assiette de l'impôt et en second lieu par la question de savoir si les ménages ou autres entités paient l'impôt. Les cas particuliers de la classification, dans lesquels des questions de définition ainsi que d'autres problèmes se posent, sont mentionnés dans le Guide d'interprétation. Les notes de bas de page qui accompagnent les tableaux par pays du chapitre 4 enregistrent les cas dans lesquels les pays s'écartent des principes directeurs.

Les données utilisées ont été fournies pour la plupart par les Délégués du Groupe de travail n° 2 du Comité des affaires fiscales sur l'analyse des politiques et les statistiques fiscales. L'OCDE remercie de sa coopération le Fonds monétaire international dont la classification des recettes publiques – bien qu'elle soit, à certains égards, moins détaillée – est à bien des égards semblable à celle de l'OCDE¹. Parmi les autres classifications actuellement utilisées, les plus importantes sont le Système de comptabilité nationale (appelé ci-après SCN) et le Système européen de comptes économiques intégrés des États membres de l'Union européenne (appelé ci-après SEC) qui constitue essentiellement un approfondissement du SCN bien qu'il en diffère à certains égards. Sous réserve de quelques exceptions mineures, les chiffres du SCN ou du SEC peuvent être rattachés directement à ceux de la présente étude car les critères et définitions du SCN ont été adoptées sauf mention contraire expresse.

Cette publication comprend cinq chapitres. Le chapitre 1 indique succinctement l'évolution de la fiscalité au cours des 50 dernières années en mettant l'accent successivement sur les niveaux d'imposition (section 1.1), sur les structures fiscales (section 1.2) et sur la répartition des impôts par niveau d'administration (section 1.3). La section 1.4 discute l'impact de la révision des données du PIB. La publication de cette année comporte également dans son chapitre 2 une étude spéciale sur les « Questions actuelles sur la comptabilisation des recettes fiscales ». Le chapitre 3 contient une série de tableaux

statistiques comparatifs pour les années 1965-2014 (section 3.1) et une série de graphiques comparatifs qui indiquent les différences entre les pays quant au niveau d'imposition et aux structures fiscales (section 3.2). Des estimations des recettes fiscales pour 2015 sont présentées à la section 3.3 pour tous les pays dans lesquels de telles données sont disponibles. Le chapitre 4 contient des tableaux statistiques comportant une ventilation détaillée des recettes fiscales par pays pour les années comprises entre 1965 et 2014 (section 4.1)² et elle indique en outre comment les pays financent leurs régimes de prestations sociales (section 4.2) ainsi que les cotisations sociales versées par les administrations (section 4.3). Le chapitre 5 ventile les recettes publiques entre les sous-secteurs ci-après : administration fédérale ou centrale, administration des États, administrations locales et de sécurité sociale. Il contient une série de graphiques comparatifs qui indiquent les différences entre les pays quant aux structures fiscales (section 5.1), une série de tableaux statistiques comparatifs pour les années 1975-2014 (section 5.2) et une deuxième série de tableaux statistiques comportant une ventilation détaillée des recettes fiscales par pays pour les années comprises entre 1975 et 2014 (section 5.3).

Notes

1. Voir FMI (2014), *Government Finance Statistics Manual 2014*, Fonds Monétaire International, Washington, DC.
2. En raison du manque de place, les données indiquées concernent une sélection d'années entre 1965 et 2014. Les données portant sur les autres années sont disponibles en ligne.

Chapter 1

Tax revenue trends, 1965-2015

Introduction

This annual Report presents detailed internationally comparable data on tax revenues of OECD countries for all levels of government. The latest edition provides outturn (i.e. final) data on tax revenues in 1965-2014. In addition, provisional estimates of tax revenues in 2015 are included for almost all OECD countries.

In this Report, taxes are defined as compulsory, unrequited payments to general government. Taxes are unrequited in the sense that benefits provided by government are not normally in proportion to their payments.

In the OECD classification, taxes are classified by the base of the tax:

- Income and profits (heading 1000)
- compulsory social security contributions paid to general government, which are treated as taxes (heading 2000);
- payroll and workforce (heading 3000);
- property (heading 4000);
- goods and services (heading 5000);
- other (heading 6000).

Much greater detail on the tax concept, the classification of taxes and the accrual basis of reporting is set out in the *OECD Interpretative Guide* at Annex A of this Report.

All of the averages presented in this Report are unweighted.

1.1. Tax ratio

a. Provisional data on tax ratios for 2015

New OECD data in the annual *Revenue Statistics* publication show that tax revenues as a percentage of GDP continue to recover gradually from the falls in almost all countries in 2008 and 2009 that stemmed from the financial and economic crisis. The average tax to GDP ratio in OECD countries was 34.3%¹ in 2015 compared with 34.2% in 2014 and 33.8% in 2013. The 2015 figure is the highest recorded OECD average tax to GDP ratio since records began in 1965 (Tables 1.1 and 1.2).

- Denmark had the highest tax to GDP ratio in 2015 (46.6%) and Mexico the lowest (17.4%).
- Of the 32 countries for which data for 2015 are available, the ratio of tax revenues to GDP compared to 2014 rose in 25 and fell in 7.
- Between 2014 and 2015, the largest tax ratio increases were in Mexico (2.3 percentage points explained by an increase in taxes on income and profits and in taxes on goods and services as a percentage of GDP) and in Turkey (1.3 due to higher revenues from taxes on goods and services and higher social security contribution revenues). Other countries with increases in their tax to GDP ratio between 2014 and 2015 of more than one percentage point were Estonia, Greece, Hungary and the Slovak Republic.

1. The total tax revenues have been reduced by the amount of any capital transfer that represents uncollected taxes.
2. Unified Germany beginning in 1991.
3. The data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.
4. Secretariat estimate, including expected revenues collected by state and local governments.
5. Calculated by applying the unweighted average percentage change for 2015 in the 32 countries providing data for that year to the overall average tax to GDP ratio in 2014.

StatLink  <http://dx.doi.org/10.1787/888933416165>

- The largest falls in the tax ratio between 2014 and 2015 were in Ireland (5.1 percentage points, due to exceptionally high GDP growth in 2015), Denmark (3 percentage points, due to a fall in revenues from taxes on income and profits) and Iceland (1.8 percentage point). Luxembourg also showed a fall of more than one percentage point.
- Compared with 2007 (pre-recession) tax to GDP ratios, the ratio in 2015 was still down by more than 3 percentage points in two countries (Ireland and Norway). The biggest fall has been in Ireland, from 30.4% in 2007 to 23.6% of GDP in 2015. Excluding Ireland, the largest fall has been in Norway, from 42.1% of GDP in 2007 to 38.1% in 2015.
- The tax burden in Turkey increased from 24.1% to 30.0% between 2007 and 2015. Two other countries (Greece and Mexico) showed increases of 4 percentage points or more over the same period.

3. Calculated by applying the unweighted average percentage change for 2015 in the 33 countries providing data for that year to the overall average tax to GDP ratio in 2014.

StatLink  <http://dx.doi.org/10.1787/888933416170>

Between 2014 and 2015, Ireland experienced unusually high GDP growth, at 32.4% in nominal terms (26.3% in real terms). This exceptionally high GDP growth was driven by transfers of intangible assets (including licences and patents) into the Irish jurisdiction by a number of multinational enterprises. The increase in the stock of intangible assets, used in supporting contract manufacturing arrangements, resulted in higher production that was attributable to Ireland, as well as to higher exports, depreciation and consumption of fixed capital. Together with increased aircraft imports into Ireland in 2015, this has led to the unusually high GDP growth.

Although the nominal amount of tax revenues increased by 8.8% from 2014 to 2015 (measured in national currency), the higher GDP growth during this period caused the tax to GDP ratio in Ireland to fall sharply, decreasing from 28.7% in 2014 to 23.6% in 2015. The fall in the tax to GDP ratio in Ireland lowered the unweighted OECD average tax to GDP ratio in 2015. Inclusive of Ireland, the unweighted OECD tax to GDP ratio in 2015 was 34.3%, a 0.1 percentage point increase since 2014. Excluding Ireland, the average tax to GDP ratio for the remaining OECD countries is 34.6% in 2015, an increase of 0.3 percentage points since 2014 for the remaining 34 countries.

b. Final data on tax ratios for 2014

The latest year for which tax to GDP ratios are based on final revenue data and available for all OECD countries is 2014 (Figure 1.1). These data show that tax ratios vary considerably across countries.

- In 2014, Denmark had the highest tax to GDP ratio (49.6%), followed by France, Belgium and Finland.
- In contrast, nine countries – Australia, Chile, Ireland, Korea, Latvia, Mexico, Switzerland, Turkey and the United States – had tax ratios of below 30%.
- Mexico had the lowest ratio at 15.2% followed by Chile at 19.8%.
- The tax ratio in the OECD area as a whole (unweighted average) rose by 0.4 percentage points from 2013 to 34.2% in 2014 (see Table 1.1).
- Relative to 2013, overall tax ratios rose in 26 OECD member countries and fell in 9.
- The largest increases in the ratio were in Iceland (2.9 percentage points), Denmark (2.8) and Japan (1.7) and New Zealand (1.3).
- Three countries – Estonia, Netherlands and Slovak Republic – saw increases between 0.9 and 1.0 percentage points from 2013 to 2014.
- The largest reductions were in Norway (1.2 percentage point) and the Czech Republic (1.0).

The key changes in the tax to GDP ratio of the main tax headings between 2013 and 2014 were as follows:

- Revenues from taxes on income (personal and corporate income taxes together) as a percentage of GDP increased from 11.4% in 2013 to 11.5% in 2014 on average. The largest increase was in Denmark (2.9 percentage points) and Iceland (1.3 percentage point). Norway and Italy reported the largest falls in this ratio (by 1.7 and 0.6 percentage point of GDP respectively) (Table 1.2).
- The corresponding ratios were largely unchanged between 2013 and 2014:
 - social security contributions remained at 9.1% (Table 3.13);
 - payroll taxes remained at 0.4% (Table 3.19);
 - property taxes remained at 1.9% (Table 3.21);
 - taxes on goods and services increased from 10.8 to 11.0% (Table 3.23).

Aggregate tax ratios often figure prominently in policy debates and they are sometimes linked directly to the economic performance of nations. A special feature included in Section S.2 of the 1999 edition of this Report explained why figures on tax revenues measured as a percentage of GDP should generally be interpreted with caution. More specifically, the revised guidelines set out in the 2008 System of National Accounts (SNA) that have been used to estimate the value of GDP for 32 of the 35 OECD countries, have resulting in higher GDP levels. As a consequence, the revised tax ratios reported in this publication are lower than tax to GDP ratios before these revisions. To limit any distortionary impact over the reporting period, the present edition of the Report employs revised GDP estimates for 1965 and later years in those cases where OECD countries have not reported revised GDP figures. The scale of the GDP revisions is considered in greater detail in the “Methodology issues” section below.

Figure 1.1. **Total tax revenue as % of GDP, 2014**

Note: Countries have been ranked by their total tax revenue to GDP ratios.

StatLink  <http://dx.doi.org/10.1787/888933416001>

c. Tax ratios changes between 1965 and 2014

The evolution of the changes in tax ratios between 1965 and 2014 is as follows:

- The average tax to GDP ratio in the OECD area increased from 24.8% to 34.2% (9.4 percentage points) between 1965 and 2014 (Table 3.2).
- The historical development of tax ratios for individual OECD countries varies greatly, as shown in Figures 1.2, 1.3, 1.4 and 1.5. Each figure relates national changes in the tax ratio to the OECD average, for the periods 1965-75, 1975-85, 1985-95 and 1995-2014,

Figure 1.2. **Changes in tax to GDP ratio (in % points)**

StatLink  <http://dx.doi.org/10.1787/888933416014>

respectively. Despite the increase, on average across the OECD countries total tax revenues as a percentage of GDP have fallen in some countries.

- Between 1965 and 1975, the tax burden in the OECD area increased by 3.8 percentage points (Figure 1.2). Until the first oil shock (1973 to 1974), strong, almost uninterrupted income growth enabled tax levels to rise in all OECD countries. In part, tax levels rose automatically through the effect of fiscal drag on personal income tax schedules.

- Between 1975 and 1985, the tax burden in the OECD area increased by 2.9 percentage points (Figure 1.3). After the mid-1970s, the combination of slower real income growth and higher levels of unemployment apparently limited the revenue raising capacity of governments. But during and after the deep recession following the second oil shock (1980), countries in Europe saw tax levels rise further, to finance higher spending on social security and rein in budget deficits.

1975-85

Source: Table 3.2.

Information on data for Israel: <http://oe.cd/israel-disclaimer>.

StatLink  <http://dx.doi.org/10.1787/888933416028>

- Between 1985 and 1995, the tax burden in the OECD area increased by a further 1.8 percentage point (Figure 1.4). After the mid-1980s, most OECD countries substantially reduced the statutory rates of their personal and corporate income tax, but the negative revenue impact of widespread tax reforms was often offset by reducing or abolishing tax reliefs.

Figure 1.4. **Changes in tax to GDP ratio (in % points)**

StatLink  <http://dx.doi.org/10.1787/888933416039>

- Between 1995 and 2000, the average OECD tax to GDP ratio rose to 34.0%, its highest recorded level at that time. It fell back slightly between 2001 and 2004, but then rose again between 2005 and 2007 before falling back following the crisis. Taking these changes together the average tax level in the OECD area increased by 0.9 percentage point between 1995 and 2014 (Figure 1.5).

Figure 1.5. **Changes in tax to GDP ratio (in % points)**

1995-2014

Source: Table 3.2.

Information on data for Israel: <http://oe.cd/israel-disclaimer>.StatLink  <http://dx.doi.org/10.1787/888933416041>

- Such averages for the OECD area as a whole conceal the great variety in national tax burdens. In 1965, measures of tax to GDP ratios in OECD countries ranged from 10.6% in Turkey to 33.6% in France. By 2014, the corresponding range was from 15.2% in Mexico to 49.6% in Denmark. The trend towards higher tax levels over this period reflects the need to finance sizeable increase of public sector outlays in almost all OECD countries.

1.2. Tax structures

Tax structures are measured by the share of major taxes in total tax revenue. While, on average, tax levels have generally been rising, the share of main taxes in total revenues – the tax structure or tax “mix” – has been remarkably stable over time. Nevertheless, several trends have emerged up to 2014 (the latest year for which data is available for all 35 OECD countries) (Table 1.3).

Table 1.3. Tax structures in the OECD area

Per cent	1965	1975	1985	1995	2005	2010	2014

StatLink  <http://dx.doi.org/10.1787/888933416186>

Taxes on income and profits

- On average, OECD countries collected 33.7% of their tax revenues through taxes on income and profits (personal and corporate income taxes taken together) (Table 3.8). Taxes on personal and corporate incomes remain the most important source of revenues used to finance public spending in sixteen OECD countries, and in nine of them – Australia, Canada, Denmark, Iceland, Ireland, New Zealand, Norway, Switzerland and the United States – the share of income taxes in the tax mix exceeds 40% (Table 3.6).
- Revenues from personal income taxes are 24% of total taxes on average in 2014 compared with around 30% in the 1980s (Table 3.10). About two percentage points of this reduction can be attributed to the impact on the average of a number of relatively new entrants to the OECD from Eastern Europe for which tax revenue data is only available from the 1990s onwards. These countries tend to have relatively low personal income tax revenues and high revenues from social security contributions, but this impact is observed on the post 1990 data only.

- The variation in the share of the personal income tax between countries is considerable. In 2014, it ranged from a low of 7% and 10% in Chile and the Slovak Republic, respectively, to 41% in Australia and 54% in Denmark (Table 3.10).
- The sharp fall in the share of revenues from corporate income taxes in total taxation in 2008 and 2009 did not continue into 2011 and 2012, but the share of these taxes in total revenues remains, at 9% in 2014, below its 11% share in 2007 (Table 3.12).
- The share of the corporate income tax in total tax revenues shows a considerable spread, from around 4% (Finland, Hungary and Slovenia) to 17% (Norway) and 21% (Chile). Apart from the spread in statutory rates of the corporate income tax, these differences are at least partly explained by institutional factors or the exploitation of mineral deposits, for example:
 - the degree to which firms in a country are incorporated;
 - taxation of oil revenues;
 - the erosion of the corporate income tax base, for example as a consequence of generous depreciation schemes; and
 - other instruments to postpone the taxation of earned profits.

Social security contributions

- Social security contributions as a share of total tax revenues were 26% in 2014. They were highest in the Czech Republic and the Slovak Republic (43-44%). In contrast, Australia and New Zealand do not have social security contributions (Table 3.14). OECD countries also show a wide variety in the relative proportions of social security contributions paid by employees and employers (Tables 3.16 and 3.18).

Property taxes

- Between 1965 and 2014, the share of taxes on property fell from 8% to 6% of total tax revenues on average.
- In relative terms, property taxes have a share exceeding 10% of total tax revenue – in five countries (Australia, Canada, Korea, the United Kingdom and the United States) (Table 3.22).

Consumption taxes

- The share of taxes on consumption (general consumption taxes plus specific consumption taxes) fell from 36% to 31% between 1965 and 2014 (Table 3.26).
- During this period, the composition of taxes on goods and services has fundamentally changed. A fast-growing revenue source has been general consumption taxes, especially the value-added tax (VAT) which is now found in thirty-four of the thirty-five OECD countries.
- General consumption taxes presently produce 21% of total tax revenue, compared with only 12% in the mid-1960s (Table 3.28).
- In fact, the substantially increased importance of the value-added tax has served to counteract the diminishing share of specific consumption taxes, such as excises and custom duties:
 - between 1965 and 2014, the share of specific taxes on consumption (mostly on tobacco, alcoholic drinks and fuels, including some newly introduced environment-related taxes) was more than halved;
 - rates of taxes on imported goods were considerably reduced everywhere, reflecting a global trend to remove trade barriers;

- nevertheless, countries such as Estonia (around 14%), Slovenia (around 15%) and Turkey (around 22%) still collect a relatively large part of their tax revenues by way of taxes on specific goods and services (Table 3.30).

1.3. Taxes by level of government

Table 1.4 shows the relative share of tax revenues attributed to the various sub-sectors of general government and how it has changed between 1975 and 2014.

- Spain is constitutionally a non-federal country with a highly decentralised political structure.
- The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes.

StatLink  <http://dx.doi.org/10.1787/888933416193>

Federal and regional countries

- In 2014, the share of central government receipts in the eight federal OECD countries varied from 31% in Germany to 80% in Australia.
- In 2014, the share of the states varied from 2% in Austria, 4% in Mexico and 5% in Belgium to 39% in Canada. The share of local government varied from 2% in Mexico to 15% in Switzerland.

- Between 1975 and 2014, the share of federal government revenues declined by about eight percentage points in Belgium and less rapidly in Canada, Germany and the United States.
- The share of federal government revenues increased in Austria and Switzerland by 15 and five percentage points respectively. There was little change in Australia and Mexico.
- Of the seven federal countries with social security funds the share increased in five, the exceptions being Canada and Mexico where it slightly declined.
- Spain is now classified as a regional rather than a unitary country because of its highly decentralised political structure. In 2014, the share of central government receipts was 42% compared with 14% for the regional government. Between 1975 and 2014, the share of local government receipts increased from 4% to 10% and the share of social security funds declined from 48% to 34%.

Unitary countries

- In unitary OECD countries, the share of central government receipts in 2014 varied from 34% in France and 37% in Japan to 93% in New Zealand.
- The local government share varied from 1% in Estonia and in the Czech Republic to 37% in Sweden.
- Between 1975 and 2014, there have been shifts to local government of 5 percentage points or more in six countries – France, Iceland, Italy, Korea, Portugal and Sweden and smaller increase in the Netherlands. Shifts of 5 percentage points or more in the other direction occurred in two countries – Norway and the United Kingdom.
- Between 1975 and 2014, there were increases in the share of social security funds of 7 or more percentage points in four countries – Finland, France, Japan and Korea – and corresponding decreases in three others – Italy, Norway and Portugal. In two other countries – Poland and Turkey – the data showed an increase of 7 percentage points or more between 1995 and 2014.
- The guidelines for attributing these revenue shares to the different levels of government are based on the final version of the 2008 System of National Accounts. These guidelines are discussed in the Special feature S.1 in the 2011 edition of *OECD Revenue Statistics*.

EU member states in the OECD

- The “supranational” column of Table 1.4 reports taxes collected on behalf of the European Union (EU) by the twenty-one EU member states that are members of the OECD. For years prior 1998, custom duties collected on behalf of the EU by national tax administrations of the EU member states are included under heading 5123. From 1998 onwards, these custom duties are shown as a “memorandum” item since they represent a tax imposed by the EU and collected by national administrations. However, they continue to be part of the aggregate revenue figures which represent all taxes imposed within the territory of EU member states. This approach ensures consistency of the time series, and ensures that the tax to GDP ratio measures are immune to changes in the relative share of customs duties in: 1) the composition of EU financing resources; and 2) national tax mixes of EU member states. The amounts of customs duties concerned are shown in Table 1.5.

Table 1.5. **Customs duties collected on behalf of the European Union**

StatLink  <http://dx.doi.org/10.1787/888933416209>

1.4. The impact of GDP revisions on reported tax levels

The tax ratios shown in this Report express aggregate tax revenues as a percentage of GDP. It is important to recognise that the value of this ratio depends on its denominator (GDP) as well as its numerator (tax revenue), and that the denominator is subject to historical revision.

The numerator (tax revenue)

- For the numerator, the OECD Secretariat uses revenue figures that are submitted annually by correspondents from national Ministries of Finance, Tax Administrations or National Statistics Offices. Although provisional figures for most countries become available with a lag of about six months, finalised data become available with a lag of around one and a half years. Final revenue data for 2014 were received during the period May-August 2016.
- In thirty-one OECD countries, the reporting year coincides with the calendar year. Four countries – Australia, Canada, Japan and New Zealand – have different reporting years. Reporting year 2013 includes Q2/2013–Q1/2014 (Canada, Japan) and Q3/2013–Q2/2014 (Australia, New Zealand) respectively (Q = quarter).

The denominator (GDP)

- For the denominator, the GDP figures used for this Report are the most recently available on 1 September 2016. By that time, the 2014 and 2015 GDP figures were available for all OECD countries.
- Using these GDP figures ensures a maximum of consistency and international comparability for the reported tax to GDP ratios.

- The GDP figures are based on the OECD Annual National Accounts (ANA-SNA) for the thirty-one OECD countries where the reporting year is the actual calendar year.
- Where the reporting year differs from the calendar year, the annual GDP estimates are obtained by aggregating quarterly GDP estimates provided by the OECD Statistics Directorate for those quarters corresponding to each country's fiscal (tax) year. For example, in the case of Canada Q2/2013-Q1/2014.

Revisions to the numerator and denominator

Both the numerator (tax revenues) and the denominator (the GDP figure) are subject to revisions, as more accurate estimates of the amounts involved become available. Such revisions will directly impact on published tax ratios.

- If the tax figure rises and the GDP figure remains unchanged, the tax ratio will increase.
- If the GDP figure is revised downward, the tax ratio will also go up, even though aggregate tax revenues have not increased.
- Conversely, a higher GDP estimate implies a lower tax ratio, even if the amount collected in taxes has not changed.
- Revenue data, especially for recent years, can be subject to infrequent and usually minor revisions. GDP figures are revised and updated more frequently, though not necessarily for all countries at the same time, reflecting better data sources and improved estimation procedures. Generally these revisions have a rather limited impact on tax ratios.
- Occasionally, however, GDP figures may change in a more fundamental way when internationally agreed guidelines to measure the value of GDP are changed. The latest such change relates to the System of National Accounts 2008 (2008 SNA) which has now largely replaced its predecessor, the System of National Accounts 1993 (1993 SNA). An earlier version of the System of National Accounts was set up in 1968.
- The twenty-two OECD countries that are member states of the EU have to adhere to the European System of Integrated Economic Accounts (ESA) for computing their GDP figures. The ESA is primarily an elaboration of SNA, though differing from it in several minor aspects which are not pertinent to this Report. Following the 2008 revision to the System of National Accounts, the 1995 ESA was replaced by the 2010 ESA.
- So far, the 2008 SNA applies to the GDP figures presented in this publication for 32 countries. The exceptions are Chile, Japan, and Turkey which will follow over the next few months. The GDP figures for these thirty-two countries are, with the exception of odd figures in particular years, higher following the application of the new SNA because of both methodological changes and the impact of improved data sources.
- The tax revenue figures reported in *Revenue Statistics* have hardly been affected by the changes to the definitions and standards in the SNA/ESA but in some countries there have been some adjustments as the opportunity has been taken to improve data sources and methodologies for compiling the national accounts figures (including tax revenues). However these changes have been generally relatively smaller than the changes to the GDP figures and tax ratios have generally fallen for those countries that have implemented the revised statistical framework.

- One particular problem raised by the 2008 SNA/2010 ESA revisions is that countries have varied in the period for which they have revised their GDP figures. To limit this distortionary impact, the OECD Statistics Directorate/Centre for Tax Policy and Administration have estimated revised GDP estimates for 1965 and later years in those cases where OECD countries have not reported revised GDP figures.

Note

1. Calculated by applying the unweighted average percentage change for 2015 in the 32 countries providing data for that year to the overall average tax to GDP ratio in 2014.

Chapitre 1

Tendances des recettes fiscales, 1965-2015

Introduction

Les *Statistiques des recettes publiques* sont une publication annuelle qui présente des données détaillées permettant de comparer, à l'échelle internationale, les recettes fiscales perçues par tous les niveaux d'administration dans les pays de l'OCDE. La dernière édition fournit des informations sur les recettes fiscales au cours de la période 1965-2014. En outre, des estimations provisoires relatives aux recettes fiscales pour l'année 2015 sont indiquées pour la plupart des pays de l'OCDE.

Dans ce rapport, les impôts désignent les versements obligatoires sans contrepartie aux administrations publiques. Les impôts sont sans contrepartie en ce sens que les prestations fournies par les administrations ne sont pas normalement proportionnelles à leurs paiements.

Dans la classification de l'OCDE, les impôts sont ventilés en fonction de leur base :

- revenus et bénéfiques (rubrique 1000) ;
- les cotisations obligatoires de sécurité sociale versées aux administrations publiques, qui sont traitées comme des impôts (rubrique 2000) ;
- salaire et main-d'œuvre (rubrique 3000) ;
- patrimoine (rubrique 4000) ;
- biens et services (rubrique 5000) ;
- autres impôts (rubrique 6000).

On trouvera des précisions sur la notion d'impôt, la classification des impôts et l'enregistrement sur la base des droits constatés dans le *Guide d'interprétation de l'OCDE* qui figure à l'Annexe A du présent Rapport.

Les moyennes présentées dans ce Rapport ne sont pas pondérées.

1.1. Niveau d'imposition

a. Données provisoires relatives aux ratios fiscaux pour 2015

Les nouvelles données de l'OCDE qui figurent dans la publication annuelle *Statistiques des recettes publiques* montrent que les recettes fiscales exprimées en pourcentage du PIB continuent de se rétablir progressivement, après les baisses enregistrées dans pratiquement tous les pays en 2008 et 2009 sous l'effet de la crise économique et financière. Le ratio moyen des recettes fiscales rapportées au PIB dans les pays de l'OCDE était de 34.3 %¹ en 2015, contre 34.2 % en 2014 et 33.8 % en 2013. Le chiffre de 2015 est le plus élevé obtenu depuis le début de l'enregistrement des données en 1965 (tableaux 1.1 et 1.2).

- En 2015, le Danemark enregistrait le ratio le plus élevé (46.6 %) et le Mexique celui le plus faible (17.4%).
- Sur les 32 pays pour lesquels on dispose de données se rapportant à 2015, le ratio des recettes fiscales au PIB a augmenté depuis 2014 dans 25 pays et diminué dans 7 pays.

.. signifie non disponible ; p : provisoire.

1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les recettes non collectées.
2. Allemagne unifiée à partir de 1991.
3. Les données statistiques concernant Israël sont fournies par et sous la responsabilité des autorités israéliennes compétentes. L'utilisation de ces données par l'OCDE est sans préjudice du statut des hauteurs du Golan, de Jérusalem Est et des colonies de peuplement israéliennes en Cisjordanie aux termes du droit international.
4. Estimation du Secrétariat, incluant les recettes escomptées collectées par les administrations d'État et locales.
5. Calculé en appliquant le pourcentage moyen non pondéré de variation pour 2015 dans les 32 pays qui ont communiqué des données pour cette année au ratio moyen global impôts/PIB en 2014.

StatLink  <http://dx.doi.org/10.1787/888933416211>

- Entre 2014 et 2015, les hausses les plus prononcées du ratio ont été constatées au Mexique (2.3 points de pourcentage, en raison de la hausse des impôts sur le revenu et des impôts sur les biens et services en pourcentage du PIB) et en Turquie (1.3 point, principalement causée par la hausse des recettes provenant des impôts sur les biens et services et l'augmentation des cotisations de sécurité sociale). Les autres pays dont le ratio impôts/PIB a connu une augmentation entre 2014 et 2015 sont l'Estonie, la Grèce, la Hongrie et la République slovaque (1.0 point).
- Entre 2014 et 2015, les diminutions les plus importantes du ratio concernent l'Irlande (5.1 points de pourcentage, à cause de la croissance exceptionnelle du PIB en 2015), le Danemark (3 points de pourcentage, en raison de la baisse des recettes issues des impôts sur le revenu) et l'Islande (1.8 point de pourcentage). Le Luxembourg a vu son ratio décliner de plus d'un point de pourcentage.

n.d. signifie non disponible.

1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les recettes non collectées.
2. Allemagne unifiée à partir de 1991.
3. Calculé en appliquant le pourcentage moyen non pondéré de variation pour 2015 dans les 33 pays qui ont communiqué des données pour cette année au ratio moyen global impôts/PIB en 2014.

StatLink  <http://dx.doi.org/10.1787/888933416224>

- Le ratio fiscal en 2015 était encore inférieur de plus de 3 points de pourcentage à son niveau de 2007 (avant la récession) dans deux pays : Irlande et Norvège. La baisse la plus forte s'est produite en Irlande, où le ratio est passé de 30.4 % du PIB en 2007 à 23.6 % en 2015. En excluant l'Irlande, la baisse la plus importante a été constatée en Norvège, de 42.1 % du PIB en 2007 à 38.1 % en 2015.
- La charge fiscale en Turquie a augmenté de 24.1 % à 30.0 % entre 2007 et 2015. Deux autres pays – Grèce et Mexique – ont enregistré des hausses de quatre points de pourcentage, voire plus, au cours de la même période.

Entre 2014 et 2015, l'Irlande a enregistré une croissance inhabituelle du PIB de 32.4 % en valeur (26.3 % en volume). Cette croissance résulte des transferts d'actifs intangibles (incluant les licences et les brevets) effectués par diverses entreprises multi-nationales vers la juridiction irlandaise. L'augmentation du stock d'actifs intangibles utilisés dans les accords de sous-traitance à la production manufacturière a fait croître la production attribuable à l'Irlande, ainsi que les exportations, la consommation de capital fixe et sa

dépréciation. En conjonction avec l'augmentation des importations d'avions, ces facteurs ont contribué à la croissance inhabituelle du PIB en Irlande pour l'année 2015.

Bien que le montant des recettes en valeur (exprimées en monnaie nationale) ait augmenté de 8.8 % entre 2014 et 2015, la croissance encore plus rapide du PIB durant cette période a provoqué une forte diminution du ratio impôts sur PIB, de 28.7 % en 2014 à 23.6 % en 2015. La diminution du ratio impôts sur PIB en Irlande a également affecté la moyenne non-pondérée des ratios pour les pays de l'OCDE en 2015. En incluant l'Irlande, le ratio moyen s'élevait à 34.3% en 2015, avec une augmentation de 0.1 point de pourcentage depuis 2014. En excluant l'Irlande, le ratio moyen serait de 34.6 % en 2015, avec une augmentation de 0.3 points depuis 2014 pour les 34 pays restants.

b. Données définitives relatives aux ratios fiscaux pour 2014

La dernière année pour laquelle on dispose de ratios des recettes fiscales rapportées au PIB fondés sur des recettes fiscales définitives pour tous les pays de l'OCDE est 2014 (graphique 1.1). Les chiffres montrent que ces ratios diffèrent fortement selon les pays.

- En 2014, le Danemark avait le ratio des recettes fiscales rapportées au PIB le plus élevé (49.6 %), suivi par la France, la Belgique et la Finlande.
- Au contraire, neuf pays – l'Australie, le Chili, la Corée, les États-Unis, l'Irlande, la Lettonie, le Mexique, la Suisse et la Turquie – enregistraient des niveaux d'imposition inférieurs à 30 %.
- Le Mexique avait le ratio le plus faible (15.2 %), suivi du Chili (19.8 %).
- Depuis 2013, le ratio des recettes fiscales rapportées au PIB dans la zone OCDE (moyenne non pondérée) a augmenté de 0.4 point pour atteindre 34.2 % en 2014 (voir le tableau 1.1).
- Par rapport à 2013, la charge fiscale a augmenté dans 26 pays membres de l'OCDE et a diminué dans 9 pays.
- Les augmentations les plus importantes ont été constatées en Islande (2.9 points de pourcentage), au Danemark (2.8 points), au Japon (1.7 point), et en Nouvelle-Zélande (1.3 point).
- Trois pays – Estonie, Pays-Bas et République slovaque – ont enregistré des augmentations comprises entre 0.9 et 1.0 point de pourcentage entre 2013 et 2014.
- Les diminutions les plus marquées ont été constatées en Norvège (1.2 point de pourcentage) et la République tchèque (1.0 point).

Les principaux changements affectant le ratio des recettes fiscales rapportées au PIB pour les grandes rubriques d'impôt entre 2013 et 2014 sont les suivants :

- Les recettes des impôts sur le revenu des personnes physiques et sur les bénéfices des sociétés exprimées en pourcentage du PIB ont en moyenne augmenté de 11.4 % en 2013 à 11.5 % en 2014. Les augmentations les plus importantes ont eu lieu au Danemark (2.9 points de pourcentage) et en Islande (1.3 point). La Norvège et l'Italie ont enregistré la diminution la plus forte de ce taux, respectivement de 1.7 et 0.6 point de PIB (tableau 1.2).
- Les ratios suivants sont pour l'essentiel restés stables entre 2013 et 2014 :
 - cotisations de sécurité sociale : 9.1 % (Table 3.13) ;
 - impôts sur les salaires : 0.4% (Table 3.19) ;
 - impôts sur le patrimoine : 1.9 % (Table 3.21) ;
 - impôts sur les biens et services : augmentation de 10.8 % à 11.0 % (Table 3.23).

Graphique 1.1. Total des recettes fiscales en pourcentage du PIB, 2014

Note : Les pays sont classés en fonction du total des recettes fiscales par rapport au PIB.

Source : Table 3.1.

StatLink  <http://dx.doi.org/10.1787/888933416058>

Les niveaux globaux d'imposition tiennent souvent une place essentielle dans les débats politiques et sont parfois directement associés à l'efficacité économique des nations. Une Étude spéciale qui figurait dans la Section S.2 de l'édition 1999 de ce Rapport expliquait pourquoi les chiffres relatifs aux niveaux d'imposition doivent être interprétés avec prudence. Plus précisément, les directives révisées énoncées dans le Système des comptes nationaux (SCN) de 2008 qui sont utilisées pour estimer le PIB de 32 des 35 pays membres de l'OCDE ont eu pour effet d'accroître son niveau. En conséquence, les ratios

impôts/PIB révisés présentés dans cette publication sont systématiquement inférieurs aux ratios rapportés avant ces changements. Afin de limiter cet effet de distorsion pour la période concernée, on a utilisé dans la présente édition du rapport des estimations du PIB révisé pour 1965 et les années suivantes quand les pays de l'OCDE n'ont pas fourni de chiffres révisés du PIB. La section « Questions méthodologiques » ci-dessous examine plus en détail l'ampleur des révisions du PIB.

c. Variations de la pression fiscale entre 1965 et 2014

L'évolution des coefficients de pression fiscale entre 1965 et 2014 est la suivante :

- Le coefficient moyen dans la zone OCDE a augmenté de 24.8 % à 34.2 % (9.4 points) entre 1965 et 2014 (Table 3.2).
- L'évolution historique des ratios d'imposition dans les différents pays de l'OCDE varie fortement, comme le montrent les graphiques 1.2, 1.3, 1.4 et 1.5. Chaque graphique rapproche les évolutions observées dans les différents pays du niveau d'imposition moyen de la zone OCDE respectivement pour les périodes 1965-75, 1975-85, 1985-95 et 1995-2014. Bien que les recettes fiscales totales exprimées en pourcentage du PIB aient augmenté en moyenne dans les pays de l'OCDE, le ratio d'imposition a baissé dans certains pays.
- Entre 1965 et 1975, la charge fiscale dans la zone OCDE a augmenté de 3.8 points (graphique 1.2). Jusqu'au premier choc pétrolier (1973-74), une croissance des revenus forte et presque ininterrompue a permis aux niveaux d'imposition d'augmenter dans tous les pays de l'OCDE. Les niveaux d'imposition ont augmenté automatiquement sous l'effet de la progressivité des barèmes de l'impôt sur le revenu des personnes physiques.
- Entre 1975 et 1985, la charge fiscale dans la zone OCDE a augmenté de 2.9 points (graphique 1.3). Après le milieu des années 70, le ralentissement de la croissance des revenus réels, combiné à l'augmentation du chômage, ont limité la capacité des pouvoirs publics à prélever des recettes. Cependant, à partir de la profonde récession qui a suivi le second choc pétrolier (1980), les pays européens ont été amenés à augmenter leurs impôts pour financer la hausse des dépenses de sécurité sociale et s'efforcer de maîtriser les déficits budgétaires.
- Entre 1985 et 1995, la charge fiscale dans la zone OCDE a de nouveau augmenté de 1.8 point (graphique 1.4). Après le milieu des années 80, la plupart des pays de l'OCDE ont sensiblement réduit les taux de leurs impôts sur le revenu des personnes physiques et sur les bénéficiaires des sociétés, mais l'incidence sur les recettes publiques des vastes réformes fiscales qui ont été engagées est restée limitée dans la mesure où, en même temps, la base de ces impôts était élargie par une réduction ou une suppression des déductions fiscales.
- Entre 1995 et 2000, le taux moyen d'imposition dans la zone OCDE a atteint 34.0 %, soit le niveau le plus élevé enregistré à cette époque. Il s'est ensuite légèrement replié entre 2001 et 2004, avant de repartir à la hausse entre 2005 et 2007, puis de retomber sous l'effet de la crise. En résumé, la charge fiscale moyenne dans la zone OCDE a augmenté de 0.9 point entre 1995 et 2014 (graphique 1.5).
- Ces moyennes concernant l'ensemble de la zone OCDE dissimulent la grande variété des charges fiscales nationales. En 1965, les niveaux d'imposition étaient compris entre 10.6 % en Turquie et 33.6 % en France. En 2014, ces niveaux oscillaient entre 15.2 % au Mexique et 49.6 % au Danemark. La tendance continue à l'augmentation des niveaux d'imposition reflète le besoin de financer la hausse marquée des dépenses du secteur public dans presque tous les pays de l'OCDE.

1.2. Structures fiscales

Les structures fiscales sont mesurées par la part des principaux impôts dans les recettes fiscales totales. Si, en moyenne, les niveaux d'imposition ont généralement augmenté, la part des principaux impôts dans les recettes totales – la structure fiscale ou le « dosage » des impôts – a fait preuve d'une stabilité remarquable dans le temps. Néanmoins, plusieurs tendances se manifestent jusqu'en 2014 (dernière année pour laquelle on dispose de données concernant les 35 pays de l'OCDE) (tableau 1.3).

Tableau 1.3. **Structure fiscale dans la zone OCDE**

Pour cent

	1965	1975	1985	1995	2005	2010	2014
Recettes fiscales totales	100	100	100	100	100	100	100

StatLink  <http://dx.doi.org/10.1787/888933416230>

Impôts sur le revenu et les bénéfiques

- En moyenne, les pays de l'OCDE collectent 33.7 % de leurs recettes fiscales via les impôts sur le revenu et les bénéfiques (somme des impôts sur le revenu des personnes physiques et sur les bénéfiques des sociétés, Table 3.8). Ces impôts restent la principale source de recettes utilisées pour financer les dépenses publiques dans seize des pays de l'OCDE, tandis que dans neuf d'entre eux – Australie, Canada, Danemark, États-Unis, Irlande, Islande, Norvège, Nouvelle-Zélande et Suisse – leur part dans le total des impôts excède 40 % (Table 3.6).
- En 2014, les recettes issues de l'impôt sur le revenu des personnes physiques représentent en moyenne 24 % du total des recettes, contre 30 % environ au cours des années 80 (Table 3.10). Dans cette baisse, deux points environ peuvent être attribués à l'inclusion dans la zone OCDE de pays d'Europe de l'Est pour lesquels les données relatives aux recettes fiscales ne sont disponibles qu'à partir des années 90. Dans ces pays, les recettes générées par l'impôt sur le revenu sont relativement faibles, alors que celles liées aux cotisations de sécurité sociale sont plus élevées, mais l'effet de l'inclusion de ces pays concerne seulement les données postérieures à l'année 1990.

- Les différences observées entre les pays sont considérables pour ce qui est de l'importance de l'impôt sur le revenu des personnes physiques. En 2014, la part de cet impôt allait d'un minimum de 7 % à 10 % respectivement au Chili et en République slovaque, à 41 % en Australie et 54 % au Danemark (Table 3.10).
- La forte baisse de la part des recettes tirées des impôts sur les bénéficiaires des sociétés dans le total des recettes fiscales constatée en 2008 et 2009 ne s'est pas poursuivie en 2011 et 2012, mais la part de ces impôts dans le total des prélèvements en 2014, soit 9 %, reste inférieure à leur niveau de 2007, lorsqu'elle s'établissait à 11 % (Table 3.12).
- La part des impôts sur les bénéficiaires des sociétés dans les recettes fiscales totales affiche une dispersion considérable, de 4 % environ (Finlande, Hongrie et Slovaquie) à 17 % (Norvège) et 21 % (Chili). Hormis la dispersion des taux légaux d'imposition des sociétés, ces différences sont au moins partiellement imputables à des facteurs institutionnels ou à l'exploitation des gisements de minerai, par exemple :
 - la proportion des entreprises constituées sous forme de sociétés ;
 - la taxation des recettes pétrolières ;
 - l'érosion de la base d'imposition des sociétés consécutive, par exemple, à des méthodes généreuses de calcul de l'amortissement ;
 - d'autres instruments permettant de différer l'imposition des bénéficiaires.

Cotisations de sécurité sociale

- En 2014, les cotisations de sécurité sociale représentaient 26 % du total des recettes fiscales. Elles étaient les plus élevées en République tchèque et en République slovaque (43-44 %). En revanche, l'Australie et la Nouvelle-Zélande ne collectent pas de cotisations de sécurité sociale (Table 3.14). On observe par ailleurs de grandes différences entre les pays de l'OCDE pour ce qui est des parts relatives des cotisations de sécurité sociale versées par les salariés et par les employeurs (voir les Tableaux 3.16 et 3.18).

Impôts sur le patrimoine

- Entre 1965 et 2014, la part des impôts sur le patrimoine a été ramenée en moyenne de 8 % à 6 % du total des recettes fiscales.
- En termes relatifs, la part des impôts sur le patrimoine est supérieure à 10 % du total des recettes fiscales dans cinq pays : Australie, Canada, Corée, États-Unis et Royaume-Uni (Table 3.22).

Impôts sur la consommation

- La part des impôts sur la consommation (impôts généraux sur la consommation plus impôts spécifiques sur la consommation) a diminué de 36 % à 31 % entre 1965 et 2014 (Table 3.26).
- Pendant cette période, la composition des taxes sur les biens et services s'est profondément modifiée. Les impôts généraux sur la consommation ont vu leur importance en tant que source de recettes s'affirmer rapidement, notamment pour la taxe sur la valeur ajoutée (TVA) qui est désormais appliquée dans 34 des 35 pays de l'OCDE.
- Les impôts généraux sur la consommation représentent actuellement 21 % des recettes fiscales totales, contre seulement 12 % au milieu des années 60 (Table 3.28).

- En fait, la montée en puissance de la taxe sur la valeur ajoutée a contribué à compenser la diminution de la part des impôts spécifiques sur la consommation, tels que les droits d'accise et les droits de douane.
 - Entre 1965 et 2014, la part des impôts spécifiques sur la consommation (surtout sur le tabac, les boissons alcoolisées et le carburant, y compris certaines taxes environnementales récemment instaurées) a été réduite de plus de la moitié.
 - Les taux des impôts sur les produits importés ont fortement baissé dans tous les pays, ce qui s'explique par la tendance générale à la suppression des obstacles aux échanges.
 - Néanmoins, l'Estonie (environ 14 %), la Slovénie (environ 15 %) et la Turquie (environ 22 %) collectent encore une part relativement importante de leurs recettes fiscales totales sous forme de taxes sur des biens et services spécifiques (Table 3.30).

1.3. Répartition des impôts par niveaux d'administration

Le tableau 1.4 indique la part relative des recettes fiscales attribuées aux différents sous-secteurs des administrations publiques et son évolution au cours de la période 1975-2014.

Pays fédéraux et régionaux

- En 2014, dans les huit pays fédéraux de l'OCDE, la part des recettes de l'administration centrale variait de 31 % en Allemagne à 80 % en Australie.
- En 2014, la part des collectivités régionales ou provinciales s'échelonnait entre 2 % en Autriche, 4 % au Mexique, 5 % en Belgique et 39 % au Canada. La part des collectivités locales était comprise entre 2 % au Mexique et 15 % en Suisse.
- Entre 1975 et 2014, la part des recettes de l'administration fédérale a reculé d'environ huit points de pourcentage en Belgique, tandis qu'elle a décliné moins rapidement en Allemagne, au Canada et aux États-Unis.
- La part des recettes de l'administration fédérale a augmenté en Autriche et en Suisse respectivement de 15 et 5 points. Il y a eu peu de changement en Australie et au Mexique.
- La part des caisses de sécurité sociale a augmenté dans cinq des sept pays fédéraux, à l'exception du Canada et du Mexique où elle a légèrement diminué.
- L'Espagne est maintenant classée dans la catégorie « pays régional » plutôt que dans celle des « pays unitaires » à cause de sa structure politique fortement décentralisée. En 2014, la part des recettes de l'administration centrale était de 42 %, contre 14 % pour les collectivités régionales. Entre 1975 et 2014, la part des recettes des collectivités locales a augmenté de 4 % à 10 % et la part des caisses de sécurité sociale a baissé de 48 % à 34 %.

Pays unitaires

- Dans les pays unitaires de l'OCDE, la part des recettes de l'administration centrale en 2014 se situait entre 34 % en France et 37 % au Japon, et 93 % en Nouvelle-Zélande.
- La part des collectivités locales variait de 1 % en Estonie et en République tchèque à 37 % en Suède.
- Entre 1975 et 2014, les transferts aux collectivités locales ont augmenté de 5 points ou plus dans six pays – Corée, France, Islande, Italie, Portugal et Suède – mais ont moins progressé aux Pays-Bas. Une diminution des transferts de 5 points ou plus s'est produite dans deux pays – Norvège et Royaume-Uni.

Tableau 1.4. Répartition des recettes fiscales entre les sous-secteurs de l'Administration en % du total des recettes fiscales

1. L'Espagne est constitutionnellement un pays non fédéral mais avec une structure politique très décentralisée.
2. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus.

StatLink  <http://dx.doi.org/10.1787/888933416240>

- Entre 1975 et 2014, la part des caisses de sécurité sociale a progressé de 7 points ou plus dans quatre pays – Corée, Finlande, France et Japon - tandis qu'elle enregistrait des baisses du même ordre de grandeur dans trois pays – Italie, Norvège et Portugal. Entre 1995 et 2014, cette part a augmenté de 7 points ou plus dans deux autres pays (Pologne et Turquie).
- Les directives suivies pour attribuer ces parts des recettes aux différents niveaux d'administration s'appuient sur la version finale du Système des comptes nationaux de 2008. Ces directives sont examinées dans l'Étude spéciale S.1 de l'édition 2011 des *Statistiques des recettes publiques de l'OCDE*.

États membres de l'UE dans l'OCDE

- Dans le tableau 1.4, la colonne « supranationale » donne le montant des impôts collectés pour le compte de l'Union européenne par les 21 États membres de l'UE qui sont membres de l'OCDE. Pour les années antérieures à 1998, les droits de douane collectés pour le compte de l'Union européenne par les administrations fiscales des États membres de l'UE

figurent dans la rubrique 5123. À partir de 1998, ces droits de douane sont indiqués en tant que poste « pour mémoire », car ils sont en fait imposés par l'Union européenne et collectés pour son compte par les administrations fiscales nationales. Toutefois, ils continuent de faire partie du total des recettes fiscales collectées dans les États membres de l'UE. Cette approche permet d'assurer la cohérence des séries chronologiques et évite que les ratios des recettes fiscales aux PIB subissent les effets des changements de la part relative des droits de douane dans : 1) la composition des ressources de financement de l'UE ; et 2) la composition des différents impôts des États membres de l'UE. Le tableau 1.5 résume les montants de ces droits de douane.

1.4. Impact de la révision des données du PIB sur les niveaux d'imposition déclarés

Les coefficients de pression fiscale qui figurent dans ce Rapport expriment les recettes fiscales globales en pourcentage du PIB. Il est important de tenir compte du fait que la valeur de ce ratio dépend de son dénominateur (PIB) et de son numérateur (recettes fiscales), le dénominateur étant sujet à des révisions historiques.

Le numérateur (recettes fiscales)

- En ce qui concerne le numérateur, le Secrétariat de l'OCDE utilise pour ce Rapport les données relatives aux recettes fiscales qui lui sont fournies annuellement par les correspondants des ministères des Finances, des administrations fiscales nationales ou des services nationaux de statistiques. Bien que pour la plupart des pays, des chiffres provisoires soient disponibles avec un décalage d'environ six mois, les données finalisées le sont dans un délai d'environ dix-huit mois. Ainsi, les données définitives pour 2014 ont été reçues entre mai et août 2016.

- Dans trente et un pays de l'OCDE, l'année fiscale coïncide avec l'année civile. Elle en diffère dans quatre pays : Australie, Canada, Japon et Nouvelle-Zélande. Les déclarations pour l'année 2013 couvrent respectivement T2/2013-T1/2014 (Canada, Japon) et T3/2013-T2/2014 (Australie, Nouvelle-Zélande) (T = trimestre).

Le dénominateur (PIB)

- En ce qui concerne le dénominateur, ce Rapport utilise les chiffres du PIB les plus récents dont on disposait au 1^{er} septembre 2016. À cette date, les chiffres du PIB pour 2014 et 2015 étaient disponibles pour tous les pays de l'OCDE.
- L'utilisation de ces PIB harmonisés assure un maximum de cohérence et de comparabilité internationale aux ratios impôts/PIB.
- Les chiffres du PIB proviennent des Comptes nationaux annuels des pays membres de l'OCDE (CNA-SCN) pour les trente et un pays où l'année fiscale coïncide avec l'année civile.
- Lorsque l'année fiscale diffère de l'année civile, les estimations annuelles du PIB sont obtenues par l'agrégation des données fournies par la Direction des statistiques de l'OCDE pour les trimestres correspondants aux années fiscales de chacun des pays. Par exemple, dans le cas du Canada : T2/2013-T1/2014.

Révisions du numérateur et du dénominateur

Le numérateur (recettes fiscales) et le dénominateur du ratio (PIB) sont tous deux sujets à révision lorsque des données plus récentes sont disponibles. Une telle révision influe directement sur les coefficients de pression fiscale publiés.

- Si les recettes fiscales augmentent alors que le PIB demeure inchangé, le coefficient augmente.
- Si le montant du PIB est révisé à la baisse, le coefficient augmente aussi, même si les recettes fiscales n'ont pas augmenté.
- À l'inverse, un PIB plus élevé entraîne un coefficient plus faible, même si le montant des impôts collectés n'a pas varié.
- Pour les années les plus récentes en particulier, les montants des recettes ont pu faire l'objet de révisions peu fréquentes et de faible ampleur. Les données concernant le PIB sont révisées et mises à jour plus fréquemment, mais pas nécessairement pour tous les pays en même temps, reflétant l'utilisation de sources et de procédures d'estimation plus fiables. En général, ces révisions ont une incidence assez limitée sur les ratios impôts/PIB.
- Toutefois, les chiffres du PIB peuvent parfois changer de façon plus fondamentale lorsque sont introduites, au plan international, de nouvelles procédures de calcul du PIB. Le changement le plus récent est la mise en œuvre du Système de comptabilité nationale de 2008 (SCN 2008) qui a maintenant largement remplacé son prédécesseur, le Système de comptabilité nationale de 1993 (SCN 1993). Une version plus ancienne du Système de comptabilité nationale a été mise en place en 1968.
- Les 22 pays de l'OCDE qui sont membres de l'UE sont tenus de se conformer au Système européen de comptes économiques intégrés (SEC) pour le calcul de leur PIB. Le SEC constitue essentiellement un approfondissement du SCN, bien qu'il en diffère sur certains points mineurs sans importance pour ce rapport. À la suite de la révision du SCN en 2008, le SEC de 1995 a été remplacé par le SEC de 2010.

- Jusqu'à présent, les chiffres du PIB présentés dans cette publication se fondent sur le SCN 2008 pour 32 pays. Les exceptions sont le Chili, le Japon et la Turquie, qui suivront lors des prochains mois. À l'exception de quelques chiffres concernant certaines années, les montants du PIB pour ces trente-deux pays sont plus élevés suite à l'application du nouveau SCN. Ceci s'explique par les changements méthodologiques et aussi par l'amélioration des sources des données.
- Les chiffres des recettes fiscales publiés dans les *Statistiques des recettes publiques* ont été peu affectés par les changements de définitions et de normes intervenus dans le SCN/SEC. Néanmoins, il y a eu des ajustements dans certains pays qui ont saisi l'occasion d'améliorer les sources des données et les méthodologies de compilation des chiffres de comptabilité nationale (incluant les recettes fiscales). Ces changements dans les recettes fiscales ont le plus souvent été moins marqués que ceux associés aux chiffres du PIB et les ratios ont en règle générale diminué pour les pays qui ont appliqué le système révisé.
- Un problème particulier soulevé par la révision des systèmes SCN 2008/SEC 2010 est que la période couverte par les révisions du PIB varie selon les pays. Afin de limiter cet effet de distorsion, la Direction des statistiques de l'OCDE et le Centre de politique et d'administration fiscales ont calculé des estimations du PIB révisées pour 1965 et les années suivantes quand les pays de l'OCDE n'ont pas fourni de chiffres révisés du PIB.

Note

1. Calculé en appliquant le pourcentage moyen non pondéré de variation pour 2015 dans les 32 pays qui ont communiqué des données pour cette année au ratio moyen global impôts/PIB en 2014.

Chapter 2

Special feature: Current issues on reporting tax revenues

2.1. Introduction

The release of the final version of the *IMF Government Finance Statistics Manual 2014* (IMF GFSM 2014) completed the releases of the revised versions of the three classification systems which historically have had, in the area of government revenues, a very strong overlap with the *OECD Tax Classification and Interpretative Guide*:

- the IMF GFSM 2014;
- the 2008 *System of National Accounts (SNA)*;
- the 2010 *European System of Accounts (ESA)*.

The degree of overlap is illustrated by a “bridge” table, contained in the *OECD Interpretative Guide*, which maps how the list of taxes in the *OECD Tax Classification* links to the corresponding lists in the other classification systems. The latest version of this table is shown in Annex A of this Report.

These latest editions of the three classification systems contain some revisions to the definitions and classification of government revenues compared with the previous versions. It has therefore been necessary to review certain sections of the *Interpretative Guide* in those areas where either the methodology for defining tax revenues has been altered or there have been substantial changes to the explanatory drafting in the other classification systems.

This report considers the following issues relating to the methodology in the *OECD Interpretative Guide*:

- payable or non-wastable tax credits;
- the VAT based third EU own resource in the *ESA 2010*;
- the classification of revenues from fines or penalties;
- profits of fiscal monopolies;
- imputed taxes and subsidies arising from the operation of multiple exchange rate systems;
- imputed taxes and subsidies arising from central banks imposing a rate of interest other than market rates;
- taxes on financial and capital transactions.

2.2. Payable or non-wastable tax credits

2.a. Two kinds of tax credits

There are two kinds of tax credit systems:

- Non-payable or wastable tax credits are those which can only ever be used to reduce or eliminate a tax liability. They cannot be paid out to either tax-payers or non-tax payers as a benefit. They are therefore the same as a tax allowance or relief.
- In contrast, payable or non-wastable tax credits can be partitioned into two parts. One part is used to reduce or eliminate a tax liability in the same way as a wastable tax credit.

The other part can be paid directly to recipients as a benefit payment, when the benefit exceeds the tax liability.

2.b. The OECD methodology for classifying non-wastable tax credits and two alternatives

The OECD methodology for classifying non-wastable tax credits is set out in paragraphs 19 and 20 of the *Interpretative Guide*. This states that only the part of a non-wastable tax credit that is used to reduce or eliminate a taxpayer's tax liability should be deducted in the reporting of tax revenues. This is referred to as the "tax expenditure component" of the credit. In contrast, the part of the tax credit that exceeds the taxpayer's tax liability and is paid to that taxpayer is treated as an expenditure item and not deducted in the reporting of tax revenues. This part is referred to as the "transfer component". This approach was also followed in the previous versions of the *IMF GFSM, SNA and ESA*.

Table 2.1 provides information on the non-wastable tax credits in 2014 for those countries reporting them in the Revenue Statistics 2016 (though it may be that some countries with non-wastable tax credits do not appear in the table). It shows the amounts of the non-wastable tax credits and their two components together with the results of using the figures to calculate tax revenue values and the associated tax-to-GDP ratios. This table has the same construction as one that has appeared in the "Part I – Commentary on revenues and trends" in the Revenue Statistics 2014. The treatment consistent with the *Interpretative Guide* is referred to as the "split basis" as shown in columns 5 and 8. Two alternative treatments to the split basis are also shown:

- the "net basis" which treats non-wastable tax credits entirely as tax provisions, so that the full value of the tax credit reduces reported tax revenues, as shown in columns 4 and 7;
- the "gross basis" is the exact opposite, treating non-wastable tax credits entirely as expenditure provisions, with neither the transfer component nor the tax expenditure component being deducted from tax revenue, as shown in columns 6 and 9.

Historically, there have been some practical difficulties in implementing these paragraphs of the *Interpretative Guide*, resulting in some lack of uniformity of reporting. In addition, distinguishing between tax and expenditure provisions can be conceptually difficult and so there are valid arguments for the alternative treatments. This issue was examined in Special Features appearing in both the 2000 and the 2001 editions of the *Revenue Statistics*. Consequently there is no ideal solution to the problem of how these tax credits should be treated. However, any comparison with the tax-to-GDP ratio results based on the two alternative treatments of these tax credits should take into account their potential drawbacks.

- While the "gross basis" provides comparability between the treatment of public expenditure on in-work income related benefits and non-wastable tax credits, it does not provide comparability between wastable and non-wastable credits. For example, changing a wastable tax credit into a non-wastable tax credit, even if it involves minimal fiscal cost or impact on taxpayers, could produce a large increase in reported revenue. This is because amounts previously deducted from tax revenues would be treated as an expenditure provision and no longer be deducted.
- The most serious drawback of the "net basis" is that it does not ensure comparability between countries with and without non-wastable tax credits. This is because it reduces tax revenues for countries with non-wastable tax credits by amounts that would be

Table 2.1. **Effect of alternative treatments of non-wastable tax credits, 2014**

Notes: The Austrian children's tax credit is not regarded as a tax credit in the OECD Revenue Statistics and is treated entirely as an expenditure provision.

For Denmark, France and Spain, the total tax revenues have been reduced by the amount of any capital transfer that represents uncollected taxes.

Some non-wastable tax credits in Canada cannot be split into the transfer and tax expenditure components. Their total values have been added to the transfer component.

“..” not available.

treated as expenditure in countries that use comparable expenditure programmes to deliver transfers to those who do not pay taxes. Even between countries with non-wastable tax credits, reporting on a net basis would produce lower tax revenues (everything else being the same) for countries that are giving greater assistance to non-taxpayers with these credits. Arguably, this may give a misleading impression of the extent of the tax system.

However, Table 2.1 does show that, with some exceptions, the choice of method for reporting non-wastable tax credits has only a small impact on the ratio of total tax revenue to GDP. For the countries with available data, the differences between the ratios on a net basis and on a gross basis are one percentage point or more in only France, Germany, New Zealand and the United Kingdom, and half a percentage point or more in Australia, Canada, Czech Republic, Italy and the United States.

2.c. A new methodology adopted by IMF GFSM, SNA and ESA

SNA 2008 was the first of the revisions of the three “associated” classification systems to be published. This document contained a change in the rules for classifying the taxes and benefits associated with non-wastable tax credit systems. Now, the whole amount of

the payable tax credits is registered as a “tax expense” or in other words a subsidy or social benefit, irrespective of how much is used to reduce tax liability, and how much is paid direct to beneficiaries. The taxes and benefits are now shown in the national accounts on the “gross basis” – i.e. the revenues will show the full liability before the non-wastable tax credits are allowed for, and the whole of the credits under the non-wastable tax credits system will be shown as subsidies or social benefits.

The IMF GFSM 2014 and ESA 2010 replicated the changes made in the 2008 SNA in this respect.

The catalyst for the decision to revise the classification of non-wastable tax credits in SNA 2008 was contained in a paper written by the International Public Sector Accounting Standards (IPSAS) Board. “IPSAS 23 – Revenue from non-exchange transactions taxes and transfers”, which was released in December 2006, contained the following extract titled “Expenses paid through the tax system and tax expenditures”. The clearly expressed view that the whole amount of these tax credits should be accounted for totally as expenditure was discussed by the Inter-Secretariat Working Group on National Accounts (ISWGNA) and the SNA’s Advisory Expert Group (AEG) in the context of drafting SNA 2008. As a result, the principle to treat these tax credits totally as expenses was adopted for the new version.

Expenses Paid Through the Tax System and Tax Expenditures

Taxation revenue shall be determined at a gross amount. It shall not be reduced for expenses paid through the tax system.

In some jurisdictions, the government uses the tax system as a convenient method of paying to taxpayers benefits, which would otherwise be paid using another payment method, such as writing a check, directly depositing the amount in a taxpayer’s bank account, or settling another account on behalf of the taxpayer. For example, a government may pay part of residents’ health insurance premiums, to encourage the uptake of such insurance, either by reducing the individual’s tax liability, making a payment by check or by paying an amount directly to the insurance company. In these cases, the amount is payable irrespective of whether the individual pays taxes. Consequently this amount is an expense of the government and should be recognized separately in the statement of financial performance. Tax revenue should be increased for the amount of any of these expenses paid through the tax system.

Taxation revenue shall not be grossed up for the amount of tax expenditures

In most jurisdictions, governments use the tax system to encourage certain financial behaviour and discourage other behaviour. For example, in some jurisdictions, home owners are permitted to deduct mortgage interest and property taxes from their gross income when calculating tax assessable income. These types of concessions are available only to taxpayers. If an entity (including a natural person) does not pay tax, it cannot access the concession. These types of concessions are called tax expenditures. Tax expenditures are foregone revenue, not expenses, and do not give rise to inflows or outflows of resources – that is, they do not give rise to assets, liabilities, revenue or expenses of the taxing government.

The key distinction between expenses paid through the tax system and tax expenditures is that for expenses paid through the tax system, the amount is available to recipients irrespective of whether they pay taxes, or use a particular mechanism to pay

their taxes. IPSAS 1, “Presentation of Financial Statements,” prohibits the offsetting of items of revenue and expense unless permitted by another Standard. The offsetting of tax revenue and expenses paid through the tax system is not permitted.

2.d. The classification of non-wastable tax credits remains unchanged in the OECD Interpretative Guide

The OECD Tax Policy and Tax Statistics Working Party No. 2 (WP2) has decided to retain the existing guidelines for reporting non-wastable tax credits as opposed to changing them to align with the revised versions of the other statistical sources. The following paragraphs contain some of the points that were taken into account in the discussion.

There are obvious advantages in opting for and maintaining consistency between the guidelines for presenting information in different statistical sources just to avoid the confusion that can arise when different approaches are adopted. Other things being equal, one option was therefore to revise the *Interpretative Guide* to be consistent with the revisions made to the *IMF GFSM*, *SNA* and *ESA*.

However, on the other hand, there are also some compelling reasons for retaining the existing guidelines which can be set out as follows:

- These issues were previously discussed in WP2 meetings held in 1999 and 2000. The discussions concluded that, from the perspective of tax policy makers and tax administrators, the current OECD guidelines reflect the most appropriate way to report the non-wastable tax credits. The topic was discussed in Special Features in both the 2000 and the 2001 editions of the *Revenue Statistics*.
- It is often the case in tax systems containing non-wastable tax credits that the payable element represents a relatively small element (sometimes a very small element) of the total value of the credit. The “gross-basis” of reporting dictates that the rules for reporting the whole value of the credit would be based on the existence of this smaller element. Additionally, in some cases, a move from a wastable to a non-wastable tax credit could be the result of a minor administrative change. In such cases, the “gross-basis” of reporting could create undesirable situations where a substantial change in reported tax revenues results from an administrative change having a minimal impact on taxpayers or fiscal cost. This is because amounts previously treated as a deduction from tax revenues would be treated as an expenditure provision and no longer deducted.
- The adoption of the “gross-basis” of reporting would create inconsistencies between the reporting in the *Revenue Statistics* and some of the indicators reported in the *Taxing Wages* publication. In the latter, the calculations of both the average personal income tax rate (defined as personal income tax divided by gross earnings) and the average personal tax rate (defined as personal income tax plus employee social security contributions divided by gross earnings) deduct the full value of any non-wastable tax credit from the income tax liability.
- The new guidelines are inconsistent in their application to tax expenditures in general given their application to non-wastable tax credits is different to that of other tax expenditures.
- The “gross-basis” of reporting would also produce inconsistencies between the *Revenue Statistics* and the reporting of tax expenditures. Normally, the full value of any existing non-wastable tax credit would be included in a report on tax expenditures. If the “gross-basis” of reporting were applied to the latter then a wide range of both personal income and corporate income tax credits would have to be excluded.

- There are other provisions in tax systems that are deducted from tax revenues (i.e. tax allowances or wastable tax credits) that could also be seen as a substitute for expenditure programmes. The “gross basis” does not provide comparability between these and the non-wastable tax credits.
- The consequences of these issues are likely to grow as the total value of non-wastable tax credits is increasing over time in a number of OECD countries.

These issues were once again discussed in WP2 meetings in 2015 and 2016. On the basis of the arguments presented in Section 2.d of this chapter, it was decided that from the perspective of tax policy makers and tax economists it would be appropriate to retain the existing OECD guidelines on the presentation of non-wastable tax credits in the *Revenue Statistics* and not to move to the new guidelines adopted in the *IMF GFSM 2014*, the *2008 SNA* and the *2010 ESA*.

2.3. The VAT based third EU own resource in ESA 2010

There has been a change in the recording of the VAT based third EU own resource in *ESA 2010*. These are amounts of VAT that are collected by the governments of the EU member states and then re-mitted to the Institutions of the EU. The level of the contribution of each member state is based on the levels of their particular VAT base.

In the *ESA 1995*, these tax receipts were recorded as “taxes on production and imports” (category D2) directly paid to the rest of the world. However, in the *Revenue Statistics*, these receipts have always been recorded as tax receipts in the EU member states as opposed to receipts of the EU. They have therefore been included in the overall tax to GDP ratio figures of the member states. This is confirmed by the text of paragraphs 102 to 105 of the *OECD Interpretative Guide in Revenue Statistics 2015* set out in italics below.

Levies paid by member states of the European Union (EU)

102. *The levies paid by the member states of the EU take the form:*

- VAT own resources; and
- Specific levies which include:
 1. custom duties and levies on agricultural goods (5123);
 2. gross monetary compensation accounts (5123 if relating to imports and 5124 if relating to exports); and
 3. steel, coal, sugar and milk levies (5128).

103. *The custom duties collected by member states on behalf of the EU are recorded:*

- on a gross of collection fee basis;
- using figures adjusted so that duties are shown on a “final destination” as opposed to a “country of first entry” basis where such adjustments can be made. These adjustments concern in particular duties collected at important (sea) ports. Although the EU duties are collected by the authorities of the country of first entry, when possible these duties should be excluded from the revenue of the collecting country and be included in the revenue of the country of final destination.

104. *This is the specific EU levy that most clearly conforms to the attribution criterion described in §96 above. Consequently as from 1998, these amounts are footnoted as a memorandum item to the EU member state country tables in Chapter 3 and no longer shown under heading 5123. However,*

the figures are included in the total tax revenue figures on the top line for all the relevant years shown in the tables.

105. The VAT own resources, which are determined by applying a rate not exceeding 1 per cent to an assessment basis specified in the Sixth Directive are more of a borderline case. They have some of the characteristics of a transfer (they are not derived from a clearly identifiable source of funds that are actually collected) and some of a tax (the amount of the transfer is determined by the receiving sub-sector of government). In this publication, they are not shown as a tax of the European Union (but as a tax of the EU member states), though the amounts involved are footnoted in the tables contained in Part IV.

In ESA 2010, the VAT based third EU own resource is now recorded as a current transfer paid by the government of each member state to the Institutions of the EU. This contribution to the budget of the Institutions of the EU is now recorded under the heading “VAT and Gross National Income (GNI) based EU own resources” (category D76). The VAT-based third EU own resource (D761) and the GNI-based fourth EU own resource (D762) both represent contributions to the budget of the EU. The level of the contribution of each member state is based on the levels of their VAT base and their GNI respectively. The heading D76 also includes miscellaneous other contributions of the governments to the institutions of the EU (D763).

The consequence of this change is that the recording of the VAT based budget contribution no longer has any impact on the recording of tax revenues in the National Accounts. The change in the recording of the transfer means that the amounts of taxes on production and imports (D2) payable to the rest of the world will decrease.

There is no impact on the tax revenues recorded in the *Revenue Statistics* because the amount of the transfer was previously recorded as tax receipts in the EU member states. However the change does mean that any link between the VAT based third EU own resource and the presentation of the VAT revenues in the *Revenue Statistics 2016* publication has been removed. As a result:

- the references to VAT own resources have been deleted from the paragraph 102 of the *Interpretative Guide* in *Revenue Statistics 2015* shown above;
- paragraph 105 of the *Interpretative Guide* in *Revenue Statistics 2015* has been deleted entirely; and
- the VAT based third EU resource figures will no longer be shown in the footnotes to the individual country tables in Chapter 5 “Tax revenues by subsectors of general government” of the 2016 publication (i.e. the EU country tables among tables 5.13-5.47).

2.4. The treatment of revenues from fines and penalties

In the *Revenue Statistics*, “fines and penalties” paid in relation to the assessment and payment of taxes have traditionally been recorded as tax receipts. This topic is covered as follows in paragraph 15 of the *Interpretative Guide* in *Revenue Statistics 2015*.

“15. Receipts from fines and penalties paid for the infringement of regulations identified as relating to a particular tax and interest due on payments overdue in respect of a particular tax are recorded together with receipts from that tax. Other kinds of fines identifiable as relating to tax offences are classified in the residual heading 6000. Fines not relating to tax offences (e.g. for parking offences), or not identifiable as relating to tax offences, are not treated as taxes.”

This approach was mirrored in the previous versions of the *GFSM*, *SNA*, and *ESA*. However, the revised versions adopt a different approach and state that, in principle, fines and penalties charged on tax offences should not be treated as taxes. They are instead considered to be compulsory current transfers. There is an exception in the case where it may not be possible to separate payments of fines or other penalties from the tax revenues to which they relate. In this case the fines and penalties are recorded together with the tax revenues. This topic is covered as follows in paragraph 5143 of the new *GFSM*.

“5143 In principle, fines and penalties charged on overdue taxes or penalties imposed for the attempted evasion of taxes should not be recorded as taxes. However, it may not be possible to separate payments of fines or other penalties from the taxes to which they relate. In this case, the fines and penalties relating to a particular tax are recorded together with that tax, and fines and penalties relating to unidentifiable taxes are classified as “other taxes (116)”.

WP2 discussed at a meeting in 2016 whether to retain the existing classification in the *Interpretative Guide* or to move to the revised approach adopted by the other classifications. At this meeting, the following arguments were considered:

- it could be argued that the current draft of the *Interpretative Guide* would lead to better comparative statistics on tax revenues across countries; the approach adopted by the *GFSM*, *SNA*, *ESA* could lead to fines and penalties relating to tax offences being included in the tax revenue figures for one country because they could not be separately identified and excluded for another where the statistical systems enabled identification;
- on the other hand, it is questionable whether the OECD should adopt an alternative approach to the other classification systems on what is essentially a very small component of total revenues.

On balance, it was decided to amend the text in paragraph 15 of the *Interpretative Guide* quoted above to achieve consistency with the *GFSM*, *SNA* and *ESA*.

2.5. The classification of profits from fiscal monopolies

The new *GFSM* now specifically includes new paragraphs confirming that the concept of fiscal monopoly also applies to state lotteries and other gambling to the extent that they are devices to raise revenue rather than further the interests of public economic or social policy. This is despite the fact that they may compete with privately organised lotteries and other gambling. State lotteries were specifically excluded from this category in *GFSM 2001* as they are in the current version of the *Interpretative Guide*.

WP2 discussed whether to retain the existing classification in the *Interpretative Guide* or to adopt the revised approach adopted by the *GFSM*. It was decided to acknowledge the previous approach that the traditional concept of fiscal monopoly is not generally extended to include state lotteries, the profits of which are usually accordingly regarded as non-tax revenues. However, it was also decided to add new text to say that they can be included as tax revenues if the prime reason for their operation is to raise revenues to finance government expenditure. Paragraph 63 of the new *Interpretative Guide* has been amended to reflect this addition and the revised entry on fiscal monopolies, contained in paragraphs 61 to 63, is set out in Annex A to this chapter.

2.6. An imputed tax resulting from the operation of multiple exchange rate systems

New text is also included in paragraphs 5.88 to 5.90 of the new *GFSM* (see Part b. of Annex B to this chapter) about the recording of imputed taxes and subsidies resulting from the operation of multiple exchange rate systems by a central bank or other official agency. The inclusion of this item is consistent with both *SNA 2008* and *SNA 1993* which also classify these transactions as taxes and subsidies, however, it was not previously included in the calculation of tax revenues in the *GFSM 2001*.

This item has historically been excluded from the OECD definition of tax revenues and is one of four items listed in paragraph 83 of the new *Interpretative Guide* as areas where the OECD classification of taxes has differed from SNA concepts. It was decided that the *Interpretative Guide* should continue to exclude this item from tax revenues for three main reasons:

- the OECD's definitions are intended to reflect the perspectives of tax policy makers and tax administrators; the general approach is to exclude implicit or imputed taxes and subsidies from the definition of taxes;
- no payments of tax are actually made in practice so these amounts are not likely to be perceived as tax payments either by the market participants or governments;
- central banks are not generally considered to be part of the general government sector.

2.7. An imputed tax resulting from the central bank paying a rate of interest that is below other market rates on required reserves

Imputed taxes and subsidies resulting from the central bank imposing a rate of interest other than the market rates are also included as tax revenues for the first time in paragraph 5.70 of the new *GFSM*. The relevant text is set out in Part a. of Annex B. It is consistent with the approach adopted in *SNA 2008* where the classification is explained in paragraphs 7.122 to 7.126.

This item is directly analogous to the position relating to imputed taxes and subsidies resulting from the operation of multiple exchange rate systems discussed in Section 2.6 of this chapter. It was decided that it should also be excluded from the OECD definition of tax revenues for the same reasons.

2.8. Taxes on financial capital transactions

Taxes on financial and capital transactions (OECD Category 4400) are described in paragraph 47 of the new *Interpretative Guide*. They include taxes on the issue, transfer, purchase and sale of securities, taxes on cheques, and taxes levied on specific legal transactions such as validation of contracts and the sale of immovable property.

Both the *Interpretative Guide* and the *GFSM 2001* classified these revenues under the heading of taxes on property. However, in the new editions of the *GFSM*, *SNA* and *ESA*, they are treated as general taxes on goods and services – i.e. a tax on the services of the unit selling the asset. This would be equivalent to being a sub-heading under the OECD category 5000. After discussion, WP2 decided to retain the original classification as a tax on property in order to align with the principle of maintaining consistency with historical data series as far as it is possible to do so.

2.9. Conclusion

On the basis of the above, the differences between the *OECD Interpretative Guide* and the new editions of the *GFSM*, *SNA* and *ESA* are as listed below:

- OECD includes compulsory social security contributions paid to general government in total tax revenues. Imputed and voluntary contributions plus those paid to private funds are not treated as taxes.
- OECD excludes imputed taxes or subsidies resulting from the operation of official multiple exchange rates and from the central banks imposing a rate of interest on required reserves that is different from other market rates.
- There are differences in the treatment of non-wastable tax or payable credits.
- OECD classifies taxes on financial and capital transactions under the heading of property taxes whereas the other classification systems classify them as general taxes on goods and services.
- There are different points of view on whether or not some levies and fees are classified as taxes.

ANNEX A

5122 – Profits of Fiscal Monopolies: New text for Interpretative Guide

61. This sub-heading covers that part of the profits of fiscal monopolies which is transferred to general government or which is used to finance any expenditures considered to be government expenditures (see §18). Amounts are shown when they are transferred to general government or used to make expenditures considered to be government expenditures.

62. Fiscal monopolies reflect the exercise of the taxing power of government by the use of monopoly powers. Fiscal monopolies are non-financial public enterprises exercising a monopoly in most cases over the production or distribution of tobacco, alcoholic beverages, salt, matches, playing cards and petroleum or agricultural products (i.e. on the kind of products which are likely to be, alternatively or additionally, subject to the excises of 5121), to raise the government revenues which in other countries are gathered through taxes on dealings in such commodities by private business units. The government monopoly may be at the production stage or, as in the case of government-owned and controlled liquor stores, at the distribution stage.

63. Fiscal monopolies are distinguished from public utilities such as rail transport, electricity, post offices, and other communications, which may enjoy a monopoly or quasi-monopoly position but where the primary purpose is normally to provide basic services rather than to raise revenue for government. Transfers from such other public enterprises to the government are considered as non-tax revenues. The traditional concept of fiscal monopoly is not generally extended to include state lotteries, the profits of which are usually accordingly regarded as non-tax revenues. However, they can be included as tax revenues if the prime reason for their operation is to raise revenues to finance government expenditure. Fiscal monopoly profits are distinguished from export and import monopoly profits (5127) transferred from marketing boards or other enterprises dealing with international trade.

ANNEX B

IMF text adding implicit taxes and subsidies to their list of taxes***a. An implicit tax resulting from central bank paying a rate of interest that is below other market rates on required reserves***

5.70. This category also includes the implicit taxes resulting from the central bank imposing a rate of interest other than the market rates. The central bank's main responsibility is to formulate and carry out monetary policy as part of economic policy. It therefore often acts differently than other financial corporations and generally has received the authority from government to impose its policies. In cases where the central bank uses its special powers to set interest rates that are out of line with market rates, the difference gives rise to an implicit tax and subsidy (see paragraph 6.89 and Box 6.2 for an illustration of recording these implicit taxes and subsidies). This procedure is analogous to and consistent with the practice of treating the difference between the market exchange rate and an alternative exchange rate imposed by the central bank as an implicit tax or subsidy (see paragraph 5.89).

b. An implicit tax resulting from the operation of a multiple exchange rate regime by the central bank or other official agency**Exchange profits**

5.88. Exchange profits include the profits generated when the monopoly powers of government or monetary authorities are exercised to extract a margin between the purchase and sale prices of foreign exchange, other than to cover administrative costs. The revenue derived constitutes a compulsory levy extracted from both purchaser and seller of foreign exchange. Similarly, an implicit tax results from the operation of a multiple exchange rate regime by the central bank or other official agency. It is the common equivalent of an import duty and export duty levied in a single exchange rate system or of a tax on the sale or purchase of foreign exchange. As in the case of the profits of export or import fiscal monopolies, the revenue represents the exercise of monopoly powers for tax purposes and is included in tax revenues when received by government.

5.89. Under a multiple exchange rate regime, two or more exchange rates are applicable to different categories of transactions; the rates favor some categories and discourage others. The multiple rates influence the values and the undertaking of transactions expressed in domestic currency. The net proceeds as a result of these transactions are calculated as implicit taxes or subsidies (see paragraph 6.89). The amount of the implicit tax or subsidy for each transaction can be calculated as the difference between the value of the transaction in domestic currency at the actual exchange rate applicable and the value of the transaction at a unitary rate that is calculated as a weighted average of all official rates used for external transactions.

5.90. Exchange profits are often included in a lump sum payment from the monetary authorities to government. Such a lump sum payment should be disaggregated according to the nature of the components, and each component classified according to their nature. These lump sum payments may include components of dividends, exchange profits, interest and/or equity withdrawals. This category for exchange profits should not include any payments to government of exchange profits realised other than as a result of maintenance of an exchange rate differential. Also excluded from this category are any transfers to government of unrealised revaluation profits, which are in the nature of a book entry resulting from revaluation of foreign exchange or gold holdings for the owner. As discussed in paragraph 5.115, such payments to government based on holding gains are classified as a withdrawal of equity rather than a tax. Any operational profits transferred to government should be classified as *dividends* (see paragraph 5.111).

Chapitre 2

Étude spéciale : Questions actuelles sur la comptabilisation des recettes fiscales

2.1. Introduction

La publication de la version définitive du *Manuel de statistiques de finances publiques 2014 (Manuel SFP 2014 du FMI)* achève le cycle de parution des versions révisées des trois systèmes de classification qui, historiquement, avaient beaucoup de points communs avec la *Classification des impôts et le guide d'interprétation de l'OCDE* dans le domaine des recettes publiques :

- le *Manuel SFP 2014 du FMI* ;
- le *Système de comptabilité nationale (SCN) 2008* ;
- le *Système européen des comptes économiques intégrés 2010 (SEC)*.

Le degré de chevauchement de ces référentiels est illustré par un tableau de « transition » inclus dans le *Guide d'interprétation de l'OCDE*, qui décrit les liens entre la nomenclature employée dans la *Classification des impôts de l'OCDE* et les nomenclatures utilisées dans les autres systèmes de classification. La version la plus récente de ce tableau figure à l'Annexe A du présent rapport.

Les éditions les plus récentes des trois systèmes de classification incorporent quelques modifications des définitions et de la classification des recettes publiques par rapport aux versions précédentes. C'est pourquoi il a été nécessaire de revoir certaines sections du *Guide d'interprétation* dans les domaines où soit la méthodologie de définition des recettes fiscales a été modifiée, soit des changements substantiels ont été apportés aux commentaires explicatifs des autres systèmes de classification.

Le présent Rapport aborde les thèmes ci-après, qui concernent la méthodologie du *Guide d'interprétation de l'OCDE* :

- les crédits d'impôt récupérables et non récupérables ;
- les ressources propres de l'UE fondées sur la TVA dans le SEC 2010 ;
- la classification des recettes provenant des amendes et pénalités ;
- les bénéfices des monopoles fiscaux ;
- les impôts et subventions imputés résultant de la mise en œuvre de régimes de taux de change multiples ;
- les impôts et subventions imputés résultant de l'application par les banques centrales d'un taux d'intérêt différent de celui du marché ;
- les impôts sur transactions mobilières et immobilières.

2.2. Crédits d'impôt récupérables et non récupérables

2.a. Deux sortes de crédits d'impôt

Il existe deux types de crédits d'impôt :

- Les crédits d'impôt non récupérables (ou non remboursables) ne peuvent être utilisés que pour réduire ou éliminer le montant de l'impôt à payer. Ils ne peuvent donner lieu à

un versement sous forme d'avantage monétaire au profit des contribuables, qu'ils soient imposables ou non. Ils sont donc équivalents aux abattements ou déductions fiscales.

- Au contraire, il existe deux sortes de crédits d'impôt récupérables (ou remboursables). L'une sert à réduire, voire éliminer, le montant de l'impôt à payer de la même manière qu'un crédit d'impôt non remboursable. L'autre peut donner lieu à un paiement direct au bénéficiaire sous forme monétaire dès lors que le montant de l'avantage fiscal dépasse celui de l'impôt à payer.

2.b. La méthode employée par l'OCDE pour constater les crédits d'impôt récupérables et deux alternatives

La méthode employée par l'OCDE pour le classement des crédits d'impôt récupérables est décrite dans les paragraphes 19 et 20 du *Guide d'interprétation*. Elle prévoit que seule la fraction du crédit d'impôt récupérable qui sert à réduire ou éliminer le montant de l'impôt dû par un contribuable doit être déduite dans la déclaration des recettes fiscales. Elle est appelée « composante fiscale » ou « élément de dépense fiscale » du crédit d'impôt. À l'inverse, la fraction du crédit d'impôt qui excède le montant de l'impôt dû par ce contribuable et qui lui est payée est considérée comme une dépense et n'est pas déduite dans la déclaration des recettes fiscales. Cette partie est appelée « composante transfert » ou « élément de transfert ». C'est aussi cette approche qui a été suivie dans les versions antérieures du *Manuel SFP du FMI*, le *SCN* et le *SEC*.

Le tableau 2.1 livre des informations sur les crédits d'impôt récupérables en 2014 pour les pays qui les déclarent dans les *Statistiques des recettes publiques 2016* (bien qu'il soit possible que certains pays accordant des crédits d'impôt récupérables n'apparaissent pas dans ce tableau). Ce tableau indique le montant des crédits d'impôt récupérables et de leurs deux composantes, ainsi que les résultats de l'utilisation des chiffres pour calculer le montant des recettes fiscales et les ratios recettes fiscales-PIB. Il est construit selon les mêmes modalités que celui qui figure dans la Partie I des *Statistiques des recettes publiques 2014* intitulée « Commentaires sur les tendances des recettes fiscales ». Comme le montrent les colonnes 5 et 8, le traitement conforme au *Guide d'interprétation* est appelé « répartition ». Deux alternatives à la procédure de répartition sont également présentées :

- la « comptabilisation en chiffres nets », qui assimile les crédits d'impôt récupérables à des dispositions fiscales, de telle sorte que la totalité du crédit d'impôt réduit le montant des recettes fiscales déclarées, comme le montrent les colonnes 4 et 7 ;
- la « comptabilisation en chiffres bruts » en est l'exact opposé ; elle considère la totalité des crédits d'impôts récupérables comme des dépenses directes, de sorte que, comme le montrent les colonnes 6 et 9, ni l'élément de transfert, ni l'élément de dépense fiscale ne sont déduits des recettes fiscales.

Historiquement, l'application des règles du *Guide d'interprétation* énoncées dans ces paragraphes s'est heurtée à des difficultés pratiques, ce qui a entraîné un certain manque d'homogénéité des déclarations. Au surplus, la distinction conceptuelle entre dispositions fiscales et dépenses directes peut se révéler épineuse, si bien que des arguments recevables plaident pour les méthodes de traitement alternatives. Cette question a été examinée dans des Études spéciales apparaissant dans les éditions 2000 et 2001 des *Statistiques des recettes publiques*. Il n'existe donc pas de solution idéale quant à la manière dont il convient de traiter ces crédits d'impôts. Cependant, toute comparaison avec les

Notes : En Autriche, le crédit d'impôt pour enfant à charge n'est pas considéré comme un crédit d'impôt dans les Statistiques des recettes publiques et est traité entièrement comme une provision de dépense.

Pour le Danemark, la France et l'Espagne, le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les recettes non collectées.

Certains crédits d'impôts récupérables au Canada ne peuvent pas être ventilés entre l'élément de transfert et l'élément de dépense fiscale. Leur valeur totale a été ajoutée à l'élément de transfert.

« .. » signifie non disponible.

ratios recettes fiscales-PIB qui se fonde sur les deux méthodes alternatives de comptabilisation de ces crédits d'impôt doit prendre en compte leurs inconvénients.

- Si la méthode de constatation sur la base des « chiffres bruts » garantit que le traitement des dépenses publiques consacrées aux prestations sociales liées au revenu d'activité et celui des crédits d'impôt récupérables sont comparables, elle ne garantit pas qu'il en va de même pour les crédits d'impôt récupérables et non récupérables. Par exemple, la transformation d'un crédit d'impôt non récupérable en crédit d'impôt récupérable peut aboutir à une forte augmentation des recettes déclarées, même si son coût budgétaire ou son impact sur les contribuables sont des plus modestes. En effet, les sommes qui, auparavant, étaient déduites des recettes fiscales seraient assimilées à des dépenses directes et, par conséquent, non déductibles.
- L'inconvénient le plus grave de la « comptabilisation sur la base du solde net » tient au fait qu'elle n'assure pas la comparabilité entre les pays qui accordent des crédits d'impôt récupérables et ceux qui n'en accordent pas. Cela vient de ce qu'elle minore les recettes fiscales des pays qui accordent des crédits d'impôt récupérables de montants qui seraient considérés comme des dépenses dans les pays recourant à des programmes de

dépenses comparables pour assurer des transferts au profit de ceux qui ne paient pas d'impôts. Au demeurant, toutes choses par ailleurs, et même si l'on ne prend en considération que les pays accordant des crédits d'impôt récupérables, la comptabilisation en solde net ferait apparaître des recettes fiscales moindres dans ceux qui procurent aux contribuables non imposables une aide plus généreuse au moyen de ces crédits. On peut donc en conclure que ces disparités peuvent donner une impression trompeuse quant au champ du système fiscal.

Le tableau 2.1 montre cependant que, à quelques exceptions près, le choix de la méthode de comptabilisation des crédits d'impôt récupérables n'a qu'une faible incidence sur le ratio recettes fiscales-PIB. Dans les pays pour lesquels des données sont disponibles, l'écart entre les ratios calculés sur la base du solde net et du montant brut n'est supérieur ou égal à un point qu'en Allemagne, en France, en Nouvelle-Zélande et au Royaume-Uni et il est supérieur ou égal à un demi-point en Australie, au Canada, aux États-Unis, en Italie et en République tchèque.

2.c. Une nouvelle méthodologie adoptée par le Manuel SFP du FMI, le SCN et le SEC

Le SCN 2008 est la première des révisions des trois systèmes de classification « associés » à avoir été publié. Ce document incorporait un changement des règles de classification des impôts et des prestations associées aux crédits d'impôt récupérables. Dorénavant, la totalité des crédits d'impôt récupérables est enregistrée comme une « dépense fiscale » ou, en d'autres termes, une subvention ou une prestation sociale sans égard pour la part qui vient en déduction du montant de l'impôt à payer et celle qui est versée directement aux bénéficiaires. Aujourd'hui, les impôts et prestations sont portés pour leur « montant brut » dans les comptes nationaux, ce qui signifie que les recettes indiqueront le montant total de l'impôt dû avant imputation des crédits d'impôt récupérables et que l'intégralité des crédits relevant des crédits d'impôt récupérables est incluse dans les subventions ou les prestations sociales.

Le *Manuel SFP du FMI 2014* et le *SEC 2010* ont repris ces changements introduits par le SCN 2008.

La révision de la classification des crédits d'impôt récupérables dans le SCN 2008 a été motivée par un rapport du Conseil des normes comptables internationales du secteur public (IPSASB). IPSAS 23 – Recettes provenant des transactions autres que des échanges (impôts et transferts), paru en décembre 2006, contenait l'extrait ci-après, intitulé « dépenses payées au moyen de dispositions fiscales et de dépenses directes ». L'avis clairement exprimé selon lequel le montant de ces crédits d'impôt doit être comptabilisé dans son intégralité sous forme de dépenses a été débattu par le Groupe de travail intersecrétariats sur la comptabilité nationale et le Groupe consultatif d'experts lors de la rédaction de SCN 2008. En conséquence, une décision de principe sur la comptabilisation intégrale de ces crédits d'impôt dans les dépenses a été adoptée pour la nouvelle version.

Dépenses payées au moyen de dispositions fiscales et dépenses directes

Les recettes fiscales seront calculées en chiffres bruts. Elles ne seront pas diminuées des dépenses payées au moyen de dispositions fiscales.

Dans certains pays, l'État voit dans la fiscalité un moyen commode de payer aux contribuables des prestations qui autrement seraient servies au moyen d'une autre méthode de paiement telle que l'envoi d'un chèque, un virement direct sur le compte

bancaire du bénéficiaire ou le règlement d'une autre dépense pour le compte de celui-ci. Par exemple, une partie des primes d'assurance santé des résidents peut être acquittée par l'État afin de les inciter à souscrire ce type d'assurance, soit en réduisant le montant de l'impôt à payer par les intéressés, soit en effectuant un paiement par chèque, soit en versant directement une somme à la compagnie d'assurance. Dans ce cas, le paiement de cette somme est indépendant du fait que l'intéressé paie des impôts. Cette somme est donc une dépense de l'État et doit être comptabilisée séparément dans les états financiers. Les recettes fiscales doivent être majorées du montant de toutes les dépenses qui sont ainsi payées via le système fiscal.

Les recettes fiscales ne doivent pas être majorées des dépenses directes.

Dans la plupart des pays, l'État se sert de la fiscalité pour encourager certains comportements financiers et en dissuader d'autres. À titre d'illustration, dans certains pays les propriétaires sont autorisés à déduire les intérêts hypothécaires et les taxes foncières de leur revenu brut pour calculer leur revenu imposable. Ces avantages ne sont offerts qu'aux seuls contribuables. Si une entité (y compris une personne physique) ne paie pas d'impôts, elle ne peut prétendre à l'avantage. Ces types de concessions sont appelés dépenses fiscales. Les dépenses fiscales sont des recettes auxquelles renonce l'État et non des dépenses et elles ne donnent pas naissance à des entrées ou sorties de fonds ; autrement dit, elles ne créent pas d'actifs, dettes, revenus ou dépenses pour l'État qui perçoit les impôts.

La distinction entre dépenses payées au moyen de dispositions fiscales et dépenses directes se résume au fait que, s'agissant des premières, une somme est mise à la disposition des bénéficiaires indépendamment du fait qu'ils paient des impôts ou qu'ils fassent usage d'un mécanisme particulier pour les acquitter. IPSAS 1 « Présentation des états financiers » interdit de compenser les postes de recettes et de dépenses, sauf si cela est autorisé par une autre Norme. « Il n'est pas permis de compenser recettes fiscales et dépenses payées au moyen de dispositions fiscales. »

2.d. La classification des crédits d'impôt récupérables demeure inchangée dans le Guide d'interprétation de l'OCDE

Le Groupe de travail n° 2 du Comité des affaires fiscales sur l'analyse des politiques et les statistiques fiscales a décidé de reconduire à l'identique les lignes directrices existantes sur la déclaration des crédits d'impôt récupérables plutôt que de les modifier de manière à les aligner sur les versions révisées des autres sources statistiques. Les paragraphes suivants reviennent sur plusieurs points pris en compte lors des débats.

Le parti de préserver la cohérence entre les lignes directrices sur la présentation de l'information provenant de sources statistiques différentes à la seule fin de s'épargner la confusion que peut engendrer la combinaison de plusieurs approches présente des avantages évidents. Toutes choses égales par ailleurs, une possibilité consistait donc à réviser le *Guide d'interprétation* de manière à le rendre compatible avec les révisions du *Manuel SFP du FMI*, du *SCN* et du *SEC*.

Cependant, il existe aussi d'excellentes raisons de conserver les lignes directrices existantes, à savoir :

- Ces questions avaient été débattues au cours des réunions du Groupe de travail n° 2 en 1999 et 2000. Les participants avaient conclu que, du point de vue des architectes de

la politique fiscale et de ceux qui l'administrent, les lignes directrices actuelles décrivent la procédure la plus appropriée pour déclarer les crédits d'impôts récupérables. Cette question a été examinée dans des Études spéciales figurant dans les éditions 2000 et 2001 des *Statistiques des recettes publiques*.

- Il n'est pas rare que, quand il existe des crédits d'impôt récupérables, la partie à payer ne représente qu'une proportion assez faible (et parfois très faible) de la valeur totale du crédit d'impôt. La méthode de déclaration en « montants bruts » exige que les règles de déclaration de la valeur totale du crédit d'impôt soient conditionnées par l'existence de cet élément de faible montant. De plus, dans certains cas, le passage d'un crédit d'impôt non récupérable à un crédit récupérable pourrait être causé par un changement administratif mineur. Dans ce cas, la déclaration en « montant brut » pourrait donner naissance à des situations indésirables dans lesquelles une variation substantielle des recettes fiscales est causée par un changement administratif dont l'incidence sur les contribuables ou le coût budgétaire est minime. En effet, les sommes qui auparavant étaient déduites des recettes fiscales seraient assimilées à des dépenses directes, si bien qu'elles ne seraient plus déductibles.
- L'adoption du mode de déclaration en « montant brut » engendrerait des incohérences entre les chiffres déclarés dans les *Statistiques des recettes publiques* et certains indicateurs de la publication *Les impôts sur les salaires*. Dans cette dernière, le calcul tant du taux moyen de l'impôt sur le revenu des personnes physiques (défini comme le montant de l'impôt sur le revenu divisé par le revenu brut) que du taux d'imposition moyen des personnes physiques (défini comme le montant de l'impôt sur le revenu plus la part salariale des cotisations sociales divisé par le revenu brut) déduit la valeur totale de tout crédit d'impôt récupérable du montant dû au titre de l'impôt sur le revenu.
- L'application des nouvelles lignes directrices aux dépenses fiscales en général est incohérente parce que la manière dont elles traitent les crédits d'impôt récupérables diverge de la comptabilisation des autres dépenses fiscales.
- En outre, la déclaration en « montant brut » engendrerait des écarts entre les *Statistiques des recettes publiques* et la déclaration des Dépenses Fiscales. Normalement, l'intégralité de la valeur de tout crédit d'impôt récupérable devrait être incluse dans tout rapport sur les Dépenses Fiscales. Si le principe de déclaration en « montants bruts » était appliqué à ces dernières, un grand nombre de crédits d'impôt accordés tant aux personnes physiques, au titre de l'impôt sur le revenu, qu'aux personnes morales, au titre de l'impôt sur les bénéfices, ne devraient pas être pris en compte.
- D'autres dispositions fiscales donnent lieu à une déduction des recettes fiscales (à savoir les abattements fiscaux ou les crédits d'impôt non récupérables) dans laquelle on pourrait voir un substitut à des programmes de dépenses. La comptabilisation en « montant brut » ne garantit pas la comparabilité entre ces dispositions et les crédits d'impôt récupérables.
- Il est vraisemblable que ces questions prendront de plus en plus d'importance car le coût total des crédits d'impôt récupérables augmente avec le temps dans un certain nombre de pays membres de l'OCDE.

Ces sujets ont été abordés de nouveau lors des réunions du Groupe de travail n° 2 en 2015 et 2016. Au vu des arguments présentés dans la section 2.d de ce chapitre, il a été décidé que, du point de vue des responsables de la politique fiscale et des économistes spécialistes de la fiscalité, il serait opportun de conserver les principes directeurs actuels

de l'OCDE sur la présentation des crédits d'impôt récupérables dans les *Statistiques des recettes publiques* et de ne pas basculer vers les nouveaux principes directeurs intégrés dans le *Manuel SFP 2014 du FMI*, le *SCN 2008* et le *SEC 2010*.

2.3. Les ressources propres de l'UE fondées sur la TVA dans le SEC 2010

Le SEC 2010 incorpore un changement du mode de comptabilisation des ressources propres de l'UE assises sur la TVA. Ce sont les montants de TVA collectés par les États membres de l'UE et reversés aux Institutions de cette dernière. Le montant de la contribution de chaque État membre dépend du niveau de son assiette de TVA.

Dans le SEC 1995, ces recettes fiscales étaient comptabilisées comme des « taxes sur la production et les importations » (catégorie D 2) payées directement au reste du monde. Cependant, dans les *Statistiques des recettes publiques*, ces recettes ont toujours été considérées comme des recettes fiscales dans les États membres de l'UE et non comme des recettes de l'UE. C'est pourquoi elles ont été incluses dans le ratio recettes fiscales-PIB des États membres. Cette pratique est confirmée par le texte des paragraphes 102 à 105 du *Guide d'interprétation de l'OCDE* dans l'édition 2015 des *Statistiques des recettes publiques* qui est cité plus bas en italiques.

Prélèvements effectués par les États membres de l'Union européenne (UE)

102. *Les prélèvements effectués par les États membres de l'Union européenne revêtent plusieurs formes :*

- les ressources propres fondées sur la TVA ;
- et les prélèvements spécifiques, qui comprennent :
 1. les droits de douane et les prélèvements agricoles (5123) ;
 2. les montants compensatoires monétaires bruts (5123 s'ils concernent les importations et 5124 s'ils concernent les exportations) ; et
 3. les prélèvements de la CECA, les cotisations sucre et les taxes de co-responsabilité sur le lait (5128).

103. *Les droits de douane collectés par les États membres pour le compte de l'UE sont comptabilisés :*

- sur une base qui ne tient pas compte des droits d'encaissement ;
- en utilisant des chiffres corrigés de manière à exprimer les droits sur la base de la « destination finale » et non du « pays de première entrée » lorsque de telles corrections sont possibles. Ces corrections concernent en particulier les droits prélevés dans des ports (maritimes) importants. Bien que les droits de l'UE soient prélevés par les autorités du pays de première entrée, ils doivent dans la mesure du possible être déduits des recettes du pays qui les recouvre et inclus dans celles du pays de destination finale.

104. *Ces droits de l'UE sont le plus clairement conformes au critère d'attribution décrit au §96 ci-dessus. En conséquence, à partir de 1998, ces montants apparaissent dans une note de bas de page à titre de rubrique « Pour mémoire » dans les tableaux des États membres de l'UE (chapitre 3) et ne figurent plus sous la rubrique 5123. Toutefois, ces montants sont inclus dans les grands tableaux de recettes fiscales à la ligne supérieure pour toutes les années indiquées dans les tableaux.*

105. *Les ressources de TVA qui sont déterminées par l'application d'un taux ne pouvant excéder 1 % d'une assiette précisée dans la 6^e Directive des Communautés constituent un cas particulier. Elles ont en effet certaines caractéristiques d'une subvention (elles ne proviennent pas d'une source*

clairement identifiable de fonds effectivement collectés à cet effet) et certaines autres d'un impôt (le montant de la subvention est fixé par le sous-secteur d'administration bénéficiaire). Dans cette publication, ces ressources ne figurent pas comme un impôt de l'Union européenne (mais comme un impôt des États membres de l'Union) bien que les montants en question soient indiqués en note de bas de page dans la partie IV.

Dans le SEC 2010, les ressources propres de l'UE basées sur la TVA sont dorénavant comptabilisées comme un transfert courant payé par chaque État membre aux Institutions de l'UE. Cette contribution au budget des Institutions de l'UE est aujourd'hui enregistrée sous la rubrique « TVA et ressources propres de l'UE fondées sur le revenu national brut (RNB) » (catégorie D76). La troisième ressource propre de l'UE fondée sur la TVA (D761) et la quatrième ressource propre de l'UE fondée sur le revenu national brut (D762) représentent des contributions au budget de l'UE. Le niveau de la contribution de chaque État membre dépend respectivement du niveau de son assiette de TVA et de son RNB. La rubrique D76 englobe aussi diverses autres contributions des États aux Institutions de l'UE (D763).

Ce changement a pour conséquence que la constatation de la contribution au budget qui est fondée sur la TVA n'a plus aucune incidence sur celle des recettes fiscales dans les Comptes nationaux. La modification de la procédure de comptabilisation du transfert signifie que le montant des taxes sur la production et les importations (D2) dues au reste du monde diminuera.

L'incidence sur les recettes fiscales déclarées dans les *Statistiques des recettes publiques* est nulle parce que le montant du transfert était auparavant constaté en tant que recettes fiscales dans les États membres de l'UE. Cependant, ce changement ne veut pas dire que tout lien entre les ressources propres de l'UE fondées sur la TVA et la présentation des recettes de TVA dans l'édition 2016 des *Statistiques des recettes publiques* a disparu. De ce fait :

- les références aux ressources propres fondées sur la TVA ont été retirées du paragraphe 102 du *Guide d'interprétation* de l'édition 2015 des *Statistiques des recettes publiques* figurant plus haut ;
- le paragraphe 105 du *Guide d'interprétation* de l'édition 2015 des *Statistiques des recettes publiques* a été supprimé dans sa totalité ;
- et les chiffres sur les ressources propres de l'UE fondées sur la TVA ne seront plus indiqués dans les notes de bas de page sur les tableaux par pays du chapitre 5 « Recettes fiscales par sous-secteurs d'administration » dans la publication 2016 (c'est-à-dire, dans les Tables 5.13 to 5.47 qui concernent les pays membres de l'UE).

2.4. Le traitement des recettes provenant des amendes et pénalités

Dans les *Statistiques des recettes publiques*, les « amendes et pénalités » acquittées au titre de l'établissement et du recouvrement des impôts étaient traditionnellement incluses dans les recettes fiscales. Cette question est abordée comme suit dans le paragraphe 15 du *Guide d'interprétation* dans les *Statistiques des recettes publiques* 2015.

« 15. Les recettes provenant d'amendes et pénalités acquittées pour infraction aux réglementations relatives à un impôt particulier et les intérêts de retard afférents au dit impôt ont été enregistrées avec les recettes procurées par cet impôt. Mais les autres catégories d'amendes identifiables comme se rapportant à des infractions fiscales sont classées au poste résiduel 6000. Les amendes qui ne concernent pas des infractions fiscales (comme les infractions de stationnement), ou qui ne sont pas identifiables en tant que telles, ne sont pas considérées comme des impôts. »

Cette approche a été suivie dans les versions antérieures du *Manuel SFP du FMI*, le *SCN* et le *SEC*. Cependant, les versions révisées adoptent une autre démarche et posent le principe que les amendes et pénalités infligées au titre d'infractions fiscales ne doivent pas être assimilées à des impôts. Elles sont considérées comme des transferts courants obligatoires. Il est fait exception à cette règle dans le cas où il n'est pas possible de distinguer le paiement des amendes et autres pénalités des impôts auxquels elles se rapportent. Ces amendes et pénalités sont alors comptabilisées avec les recettes de ces impôts. Cette question est abordée comme suit dans le paragraphe 5.143 du nouveau *Manuel SFP*.

« 5.143. En principe, les amendes et pénalités infligées au titre des arriérés d'impôts ou de pénalités pour tentative d'évasion fiscale ne doivent pas être comptabilisées comme des impôts. Cependant, il peut être impossible de distinguer le paiement des amendes et autres pénalités des impôts auxquels elles se rapportent. Dans ce cas, les amendes et pénalités relatives à un impôt donné sont comptabilisées avec celui-ci et les amendes et pénalités relatives à des impôts non identifiables sont classées dans les « autres impôts (116) ».

Le Groupe de travail n° 2 s'est demandé, au cours d'une réunion tenue en 2016, s'il convient de conserver la classification actuelle du *Guide d'interprétation* ou de basculer vers l'approche révisée qui a été retenue pour les autres classifications. Les arguments ci-après ont été pris en considération durant cette réunion :

- on pourrait soutenir que la version actuelle du *Guide d'interprétation* donnerait de meilleures statistiques comparatives sur les recettes fiscales d'un pays à l'autre ; le raisonnement adopté par le *Manuel SFP*, le *SCN* et le *SEC* pourrait aboutir à ce que les amendes et pénalités se rapportant à des infractions fiscales soient incluses dans les recettes fiscales d'un pays parce qu'elles n'ont pu être identifiées séparément et exclues de celles d'un autre parce que son appareil statistique a permis de les identifier ;
- d'un autre côté, il n'est pas interdit de se demander si l'OCDE ne devrait pas adopter une approche alternative vis-à-vis des autres systèmes de classification pour cette composante des recettes qui, en tout état de cause, n'en représente qu'une fraction infime.

Après mûre réflexion, il a été décidé de modifier l'énoncé du paragraphe 15 du *Guide d'interprétation* mentionné ci-dessus de manière à le rendre homogène avec le *Manuel SFP*, le *SCN* et le *SEC*.

2.5. La classification des bénéfiques des monopoles fiscaux

Le nouveau *Manuel SFP* s'est enrichi de paragraphes confirmant que la notion de monopole fiscal s'applique aussi aux loteries et autres paris parce que ce sont des outils destinés à procurer des recettes à la puissance publique plutôt qu'à mettre en œuvre la politique économique ou sociale. Cette position a été adoptée nonobstant le fait que ces monopoles peuvent être en concurrence avec des loteries et officines de paris privés. Les loteries d'État étaient expressément exclues de cette catégorie dans le *Manuel SFP 2001* et le sont aussi dans la version actuelle du *Guide d'interprétation*.

Le Groupe de travail n° 2 s'est demandé s'il convient de conserver la classification actuelle du *Guide d'interprétation* ou de basculer vers l'approche révisée qui a été retenue par le *Manuel SFP*. Il a été décidé de prendre acte du raisonnement suivi auparavant, à savoir que la notion traditionnelle de monopole fiscal ne s'étend généralement pas aux loteries nationales, dont les bénéfiques sont par conséquent considérés comme des recettes non fiscales. Néanmoins, il a aussi été décidé d'insérer un passage précisant qu'ils peuvent être

inclus dans les recettes fiscales si leur existence est motivée principalement par le souci de procurer des recettes à l'État. Le paragraphe 63 du nouveau *Guide d'interprétation* a été modifié de manière à incorporer cet ajout ; la nouvelle version des paragraphes 61 à 63 qui se rapportent aux monopoles fiscaux figure dans l'Annexe A du présent chapitre.

2.6. Les impôts imputés résultant de la mise en œuvre de régimes de taux de change multiples

De nouvelles mentions ont été insérées dans les paragraphes 5.88 à 5.90 du nouveau *Manuel SFP* (voir la Partie b. de l'Annexe B au présent chapitre) au sujet de la constatation des impôts et subventions implicites résultant de la mise en œuvre d'un régime de taux de change multiples par une banque centrale ou un autre organisme officiel. L'inclusion de ce passage concorde avec les SCN tant de 2008 que de 1993, qui considéraient aussi ces transactions comme des impôts et subventions ; cependant, elles n'étaient pas incluses dans le calcul des recettes fiscales par le *Manuel SFP* 2001.

Cet élément, qui avait été traditionnellement exclu de la définition des recettes fiscales par l'OCDE, est, avec trois autres, signalé dans le paragraphe 83 du nouveau *Guide d'interprétation* comme un domaine dans lequel la *classification des impôts par l'OCDE* s'écarte de celle qui a été retenue dans le SCN. Il a été décidé que le *Guide d'interprétation* devait continuer à exclure cette composante des recettes fiscales pour trois raisons principales :

- les définitions de l'OCDE ont pour but de refléter le point de vue des architectes de la politique fiscale et de ceux qui l'administrent ; le principe général consiste à exclure les impôts et subventions implicites et imputés de la définition des impôts ;
- comme, en pratique, il n'y a aucun paiement d'impôt, il est peu probable que leur montant soit perçu sous forme d'impôts, que ce soit par les acteurs du marché ou par les États ;
- en général, les banques centrales ne sont pas considérées comme faisant partie des administrations publiques.

2.7. Impôt imputé résultant du fait que la banque centrale paie un taux d'intérêt inférieur aux taux de marché sur les réserves obligatoires

Les impôts et subventions imputés résultant du fait que la banque centrale applique un taux d'intérêt différent des taux de marché sont aussi inclus dans les recettes fiscales pour la première fois dans le paragraphe 5.70 du nouveau *Manuel SFP*. Cette mention figure dans la Partie a. de l'Annexe B. Elle s'accorde avec la démarche suivie dans le SCN 2008, dont la classification est expliquée dans les paragraphes 7.122 à 7.126.

Cet élément est directement calqué sur la logique des impôts et subventions imputés résultant de l'existence de régimes de change à taux multiples qui a été discutée dans la section 2.6 de la présente Étude spéciale. Il a été décidé pour les mêmes motifs qu'il devrait aussi être exclu de la définition des recettes fiscales de l'OCDE.

2.8. Impôts sur transactions mobilières et immobilières

Les impôts sur les transactions mobilières et immobilières (catégorie 4400 de l'OCDE) sont décrits dans le paragraphe 47 du nouveau *Guide d'interprétation*. Ils comprennent les taxes sur l'émission, la mutation, l'achat et la vente de titres, les taxes sur les chèques et les impôts frappant certaines opérations juridiques telles que l'homologation de contrats et la cession de biens immobiliers.

Le *Guide d'interprétation* comme le *Manuel SFP 2001* ont tous deux classé ces recettes dans la rubrique des impôts sur le patrimoine. Mais dans les nouvelles versions du *Manuel SFP*, du *SCN* et du *SEC*, elles sont assimilées aux impôts généraux sur les biens et services, c'est-à-dire à un impôt sur les services de l'unité qui vend un actif. Ce procédé est l'équivalent d'un sous-groupe de la catégorie 5000 de l'OCDE. Le Groupe de travail n° 2 a décidé à l'issue d'un débat de conserver la classification d'origine (impôt sur le patrimoine) par souci de préserver dans toute la mesure du possible la cohérence avec les séries statistiques historiques.

2.9. Conclusion

Au vu de ce qui précède, les différences entre Le *Guide d'interprétation de l'OCDE* et les nouvelles éditions du *Manuel SFP*, du *SCN* et du *SEC* sont recensées ci-dessous.

- L'OCDE inclut les cotisations de sécurité sociale payées aux administrations publiques dans le montant total des recettes fiscales. Les cotisations imputées et volontaires et celles qui sont payées à des fonds privés ne sont pas considérées comme des impôts.
- L'OCDE exclut les impôts et subventions imputés qui résultent de l'existence de taux de change officiels multiples et de l'application par la banque centrale d'un taux d'intérêt différent des taux de marché aux réserves obligatoires.
- Il existe des disparités dans le traitement des crédits d'impôt récupérables.
- L'OCDE classe les impôts sur les transactions mobilières et immobilières dans la rubrique des impôts sur le patrimoine, tandis que les autres systèmes de classification les incluent dans les impôts généraux sur les biens et services.
- Les points de vue divergent quant à l'inclusion ou non de certains prélèvements et redevances dans les impôts.

ANNEXE A

**5122 – Bénéfices des monopoles fiscaux :
Nouvelle formulation pour le Guide d'interprétation**

61. Ce sous-groupe recouvre la partie des bénéfices des monopoles fiscaux qui est transférée aux administrations publiques ou qui sert à financer des dépenses considérées comme des dépenses publiques (voir §18). Les montants sont comptabilisés lorsqu'ils sont transférés aux administrations publiques ou utilisés pour effectuer des dépenses considérées comme des dépenses publiques.

62. Les monopoles fiscaux reflètent l'exercice du pouvoir d'imposition de l'État par l'intermédiaire du monopole. Les monopoles fiscaux sont des entreprises publiques non financières qui, dans la plupart des cas, exercent un monopole sur la production ou la distribution du tabac, des boissons alcoolisées, du sel, des allumettes, des cartes à jouer et des produits agricoles ou pétroliers (c'est-à-dire sur des types de produits qui peuvent être soumis, principalement ou accessoirement, aux droits d'accise visés au poste 5121) pour procurer à l'État des recettes publiques qui, dans d'autres pays, sont obtenues par le biais d'impôts frappant les transactions sur ces produits d'entreprises privées. Le monopole d'État peut être exercé au stade de la production, ou au stade de la distribution comme dans le cas des magasins de vente de boissons alcoolisées qui appartiennent à l'État ou sont contrôlés par lui.

63. Les monopoles fiscaux sont différents des services publics, comme les chemins de fer, l'électricité, les postes et autres moyens de communication, qui peuvent avoir une position de monopole ou de quasi-monopole, mais dont l'objet principal est, normalement, de fournir des services essentiels et non pas de procurer des recettes à l'État. Les transferts à l'administration de ces autres entreprises publiques sont considérés comme des recettes non fiscales. La notion traditionnelle de monopole fiscal n'a pas été élargie pour inclure les loteries nationales, dont les bénéfices sont donc considérés comme des recettes non fiscales. Néanmoins, ils peuvent être inclus dans les recettes fiscales si leur existence répond principalement à l'objectif de procurer à l'État des recettes destinées à financer des dépenses publiques. On distingue les bénéfices des monopoles fiscaux des bénéfices des monopoles d'exportation et d'importation (5127), qui sont transférés des offices de commercialisation ou d'autres entreprises s'occupant du commerce international.

ANNEXE B

Texte du FMI incorporant les impôts et subventions implicites à sa nomenclature des impôts***a. Impôt implicite résultant du fait que la banque centrale paie un taux d'intérêt inférieur aux taux de marché sur les réserves obligatoires***

5.70. Cette catégorie comprend aussi les impôts implicites résultant de l'application par la banque centrale d'un taux d'intérêt différent de ceux du marché. La responsabilité principale d'une banque centrale est de définir et de mener une politique monétaire qui s'intègre dans la politique économique. C'est pourquoi elle se comporte souvent différemment des autres sociétés financières et que, en général, elle est investie par l'État de l'autorité nécessaire pour appliquer sa politique. Si une banque centrale fait usage de son pouvoir de fixer les taux d'intérêt à un niveau différent de ceux du marché, l'écart qui en résulte crée un impôt et une subvention implicites (voir le paragraphe 6.89 et l'encadré 6.2 pour une illustration de la comptabilisation de ces impôts et subventions implicites). Cette procédure est analogue et conforme à la pratique consistant à traiter la différence entre le taux de change du marché et un taux de change alternatif imposé par la banque centrale comme un impôt ou une subvention implicite (voir le paragraphe 5.89).

b. Impôt implicite résultant de la mise en œuvre d'un régime de change à taux multiples par la banque centrale ou un autre organisme officiel**Gains de change**

5.88. Les gains de change désignent les bénéfices résultant de l'exercice par l'État ou les autorités monétaires de leur monopole afin de dégager une marge entre les prix d'achat et de vente de devises en sus de la marge nécessaire pour couvrir les frais administratifs. Les recettes qui en résultent constituent un prélèvement obligatoire imposé à l'acheteur comme au vendeur de devises. De même, l'application d'un régime de taux de change multiples par la banque centrale ou tout autre organisme officiel génère un impôt implicite. Il s'apparente à une taxe sur l'achat ou la vente de devises ou à un droit à l'importation et à l'exportation perçu dans un régime de taux de change unique. Comme les bénéfices des monopoles fiscaux sur les importations ou les exportations, ces recettes proviennent de l'exercice d'un pouvoir de monopole fiscal et sont comptabilisées comme recettes fiscales au moment où elles sont reçues par les administrations publiques.

5.89. Dans un régime de taux de change multiples, plusieurs taux de change sont appliqués à différentes catégories de transactions ; ils en favorisent certaines et en découragent d'autres. Les taux de change multiples influent sur la valeur des transactions exprimées en monnaie nationale et les dissuadent ou les encouragent. Le produit net issu de ces transactions est comptabilisé comme un impôt ou une subvention implicite (voir le paragraphe 6.89). Le montant de l'impôt ou de la subvention implicite est égal, pour chaque transaction, à la différence entre la valeur de cette transaction en monnaie nationale au

taux de change effectif en vigueur et sa valeur déterminée à un taux unitaire correspondant à la moyenne pondérée de tous les taux de change officiels employés pour les transactions externes.

5.90. Les gains de change sont fréquemment inclus dans un paiement forfaitaire des autorités monétaires à l'État. Ce paiement forfaitaire doit être ventilé en fonction de la nature de ses composantes, dont chacune doit être classée selon sa nature. Le paiement forfaitaire peut comporter des dividendes, des gains de change, des intérêts et/ou des prélèvements en capital. Ce type de gains de change ne doit inclure aucun paiement à l'État au titre des gains de change imputables à des raisons autres que l'existence d'un différentiel de taux de change. Il exclut aussi tout transfert à l'État de plus-values de réévaluation non réalisées qui, par nature, sont des opérations comptables motivées par la réévaluation de réserves d'or ou de devises. Comme l'indique le paragraphe 5.115, ces versements à l'État en fonction de gains de détention sont considérés comme des prélèvements en capital plutôt que comme des impôts. Tout bénéfice opérationnel transféré à l'État doit être classé dans les *dividendes* (voir le paragraphe 5.111).

Chapter 3

**Tax levels and tax structures,
1965-2015**

Chapitre 3

**Niveaux et structures des impôts,
1965-2015**

3.1. Comparative tables, 1965-2014

In all of the following tables the symbol (..) indicates not available/or not applicable. The main series in this volume cover the years 1965 to 2014. Figures referring to 1966-1979, 1981-89, 1991-99, 2001-06 and 2010 have been omitted because of lack of space. A complete series is, however, available on line. Data for 1955 and 1960 (for nineteen OECD countries) are provided in Part V of the 1998 edition of this Report.

The Gross Domestic Product (GDP) figures are based on the 2008 System of National Accounts (SNA) for all OECD countries except Chile, Japan and Turkey.

3.1. Tableaux comparatifs, 1965-2014

Dans tous les tableaux suivants, le symbole (..) signifie que l'information n'est pas disponible ou qu'elle n'est pas significative. La principale série chronologique des statistiques de recettes fiscales couvre les années 1965 à 2014. Les chiffres de 1966-79, 1981-89, 1991-99, 2001-06 et 2010 ont été omis pour des raisons d'espace. Une série complète est cependant disponible en ligne. La Partie V dans l'édition 1998 de ce Rapport fournit des données pour les années 1955 et 1960 (pour dix-neuf pays de l'OCDE).

Les chiffres du Produit Intérieur Brut (PIB) se fondent sur le Système de comptabilité nationale de 2008 (SCN 2008) pour tous les pays membres de l'OCDE, à l'exception du Chili, du Japon et de la Turquie.

Treatment of capital transfers. Footnote 1 in Table 3.1 to 3.35 refers to the treatment of the capital transfers that some countries make to account for taxes that have been assessed but not collected. The capital transfer has been subtracted from the total tax revenue and this reduction has been allocated between tax headings in proportion to their tax revenues.

This applies to the following countries:

- Denmark from 1971.
- France from 1992.
- Greece for 1999 and 2000.
- Spain from 2000.

Traitements des transferts en capital. La note de bas de page n° 1 des Table 3.1 to 3.35 se réfère au traitement des transferts en capital que certains pays effectuent pour tenir compte des impôts qui ont été évalués mais non recouvrés. Le transfert en capital a été soustrait des recettes fiscales totales et cette réduction a été répartie entre les différentes rubriques en pourcentage de leurs recettes.

C'est le cas pour les pays suivants :

- Danemark à partir de 1971.
- France à partir de 1992.
- Grèce pour 1999 et 2000.
- Espagne à partir de 2000.

<i>Unweighted average / Moyenne non pondérée</i>		
OECD Average / Moyenne OCDE	34.2	25.1

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.

2. From 1991, the figures relate to the united Germany.

1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.

2. Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

- The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.
- From 1991, the figures relate to the united Germany.
 - Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.
- Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

- The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.
- From 1991, the figures relate to the united Germany.
 - Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.
 - Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.

2. From 1991, the figures relate to the united Germany.

1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.

2. Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.

2. From 1991, the figures relate to the united Germany.

1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.

2. Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.
2. From 1991, the figures relate to the united Germany.
 1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.
 2. Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.

2. From 1991, the figures relate to the united Germany.

1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.

2. Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

- The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.
- From 1991, the figures relate to the united Germany.
 - Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.
- Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.
2. From 1991, the figures relate to the united Germany.
1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.
2. Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.

1. GDP is fiscal year. The year Y is calculated (at annual rate) as the average of: Q2(Y) to Q1(Y + 1) for Canada and Japan; and Q3(Y) to Q2(Y + 1) for Australia and New Zealand.

Source: OECD National Accounts.

1. PIB se référant à l'année fiscale. L'année A est calculée (taux annuel) comme la moyenne de: T2(A) à T1(A + 1) pour le Canada et le Japon ; et T3(A) à T2(A + 1) pour l'Australie et la Nouvelle-Zélande.

Source : Comptes nationaux de l'OCDE.

3.3. Estimates of Tax Revenues, 2015

Data provided in the preceding Sections 3.1 (Tables) and 3.2 (Figures) cover the years 1965 to 2014, because most countries are unable to provide definitive figures for the most recent year. However, provisional estimates of tax revenues in 2015 for the main headings in the OECD list of tax categories were available for most OECD countries at the time of publication. Two countries exclude revenues for specific levels of government and so their revenues cannot be compared with earlier years. Mexico excludes those for state and local government and Japan excludes social security contributions.

3.3. Estimations des recettes fiscales pour 2015

Les données rassemblées dans les Sections 3.1 (Tableaux) et 3.2 (Graphiques) concernent les années 1965 à 2014, car la plupart des pays ne sont pas en mesure de fournir des chiffres définitifs pour la période la plus récente. Cependant, des estimations provisoires des recettes fiscales en 2015 concernant les principales rubriques de la liste de l'OCDE de catégories fiscales étaient disponibles pour la plupart des pays de l'OCDE au moment de la publication. Deux pays ne fournissent pas d'estimations des recettes fiscales pour des niveaux d'administration spécifiques ; par conséquent, leurs recettes fiscales ne sont pas comparables aux chiffres des années précédentes. Le Mexique ne donne pas d'estimations pour les administrations d'États et les administrations locales et le Japon ne donne pas d'estimations pour les cotisations de sécurité sociale.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue.
 2. From 1991, the figures relate to the united Germany.
 3. The tax revenue figures are on a cash basis.
 4. The tax revenue figures exclude revenue for Social Security funds, figures are not available.
 5. Central government and Social security funds only.
1. Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.
 2. Depuis 1991, les chiffres se rapportent à l'Allemagne unifiée.
 3. Les chiffres relatifs aux recettes fiscales sont sur la base de la trésorerie.
 4. Les données excluent les chiffres de l'administration de sécurité sociale, les données n'étant pas disponibles.
 5. Administration centrale et administrations de sécurité sociale seulement.

1. GDP is fiscal year. The year Y is calculated (at annual rate) as the average of: Q2(Y) to Q1(Y + 1) for Canada and Japan; and Q3(Y) to Q2(Y + 1) for Australia and New Zealand.

Source: OECD National Accounts.

1. PIB se référant à l'année fiscale. L'année A est calculée (taux annuel) comme la moyenne de : T2(A) à T1(A + 1) pour le Canada et le Japon ; et T3(A) à T2(A + 1) pour l'Australie et la Nouvelle-Zélande.

Conciliation with National Accounts										
Additional taxes included in National Accounts
Taxes excluded from National Accounts
Difference in treatment of tax credits
Capital transfer for uncollected revenue
Voluntary social security contributions
Miscellaneous differences
National Accounts: Taxes and actual social contributions
Imputed social contributions
National Accounts: Taxes and all social contributions

Notes : Data are on a fiscal year basis beginning 1st July.

From 1998, taxes are recorded on an accrual basis; prior to that they were on a cash basis.

Direct taxes paid by public trading enterprises are excluded from receipts.

The figures for total tax revenue do not match the published totals in Taxation Revenue Australia. The latter is based on an accrual IMF GFS methodology and there are some differences between that and the OECD equivalent.

Heading 5213 includes radio and television licenses fees, though these are usually not regarded as a tax revenue in the OECD list.

Headings for non-wastable tax credits 1110 and 1210 include the private health insurance tax offset, family benefit, baby bonus tax offsets (paid during the 2003-04 budget year), film tax offset, and research and development tax offsets. The estimation of non-wastable credits into the expenditure and transfer components is in accordance with the OECD guidelines on the treatment and the data for this memorandum item has been provided by the Australian Taxation Office.

Notes : Year ending 31st December.

From 1995, data are on accrual basis.

Following national practice, one-third of the revenues from stamp fees (heading 6000) and fifty percent of the revenues from administration duties (heading 6000) are treated as tax revenues, the remainder being treated as non-tax revenue.

From 1988 onwards, promoting residential building is being mainly financed by capital transfers from the Federal Government to the Länder. For the years 1985 to 1987, legally fixed shares of some taxes have been transmitted automatically from Federal Government to the Länder for this purpose and these funds have been classified as tax receipts of the Länder in those years. From 1988, they are classified as Federal Government tax revenues. This break in the time series (1987/88) affects only the shares of the different subsectors and not total tax revenues.

From 1998, contributions of interested persons and parking duties are classified as non-tax revenues (sales) and no longer reported under heading 6000.

Notes : Données établies sur la base de l'année civile se terminant le 31 décembre.

À partir de 1970, les données sont sur la base des droits constatés.

La rubrique 5100 comprend des taxes sur la fourniture d'eau, de gaz et d'électricité, sur le téléphone et les transports, taxes qui seraient classées dans d'autres postes de la rubrique 5100 si elles ne faisaient pas partie de la taxe de transmission (impôt sur le chiffre d'affaires) qui a été remplacée au 1^{er} janvier 1971 par une taxe sur la valeur ajoutée.

Table 4.4. Canada (cont./suite)
 Details of tax revenue/Recettes fiscales détaillées

Notes : From 2001, all data are for the year ending 31st December. For 2005 and earlier years, data for the Federal, Provincial and Territorial governments are on a fiscal year basis commencing 1st April. Data for local government are on a fiscal year basis commencing 1st January.

From 1999, data are on accrual basis, except that personal income taxes are on a modified cash basis.

There are some minor differences between the data for the years 1965 to 1978 and those for subsequent years. These mostly relate to the inclusion of fines and penalties or late payment of taxes and deductions for the child tax credits in the data for the years 1979 to 1983.

Heading 1210 – Taxes federal government: Federal corporate taxes include capital taxes.

Heading 2000: Includes receipts from the Canadian Pension Plan, Quebec Pension Plan, Unemployment Insurance Fund and Provincial Health Insurance. Premiums, Medicare Premiums and Social Insurance levies but excludes that part of the taxes on income and sales taxes earmarked for old age security. The practice of earmarking these taxes was discontinued in June 1975.

Heading 4400: From 2002 onward, includes land transfer taxes of the provincial, territorial and local governments. Prior to 2002, land transfer taxes of the local government were included in line 6000 and those provincial and territorial governments were included in line 4520.

Heading 5121: The large increase in this heading between 1980 and 1981 is due to the introduction of a «special petroleum compensation charge», a «Canadian ownership special charge» and to an increase in the natural gas tax of C\$ 2 399 millions.

Heading 5122: From 1988, profits on fiscal monopolies include lottery profits.

Heading 5128: From 1988, other taxes of Federal Government include the annual fees for managing the spectrum (airwaves) allocation to the cellular industry.

Heading 5211: Some Québec motor vehicle licence administrative fees are included in sales of goods and services for the period 1988-89 to 1997-98. From 1998-99 onward, these fees are included under other taxes – motor vehicle licences.

Notes : Year ending 31st December.

From 1988, data are on accrual basis.

Finland has an imputation system where the full credit is taken into account in shareholders taxation. According to estimates made by the National Board of Taxation, the credit given to shareholders was 193 millions euros in 1991; the effects on personal income taxation are estimated.

Headings 2120 and 2320: The breakdown of contributions paid by employees and self-employed or non-employed is estimated.

Heading 4200: All figures in this subheading are estimated.

Heading 4400: Stamp duties include payment for some government services where the levy can be regarded as required (the levy is linked to the cost of providing the service). However, they are classified as taxes and recorded under this subheading as taxes on financial and capital transactions because the amounts involved cannot be identified.

Heading 5121: The negative item under the title «Price difference compensations» refers to the subsidies paid out on agricultural products under the price compensation scheme which can be offset against any positive tax liability which arising under the same scheme. From 1983, this item has been offset against revenues from excises on certain foodstuffs, on medium and stronger beer and on non-alcoholic beverages.

Heading 5126: Prior to 1979, no figures are available for amounts paid under the Fire protection levy.

Heading 5212: Prior to 1990, a part of the tax is paid by «households».

Notes : Année civile se terminant le 31 décembre.

À partir de 1992, les données sont sur la base des droits constatés.

À partir de 1970, les chiffres ont été calculés selon le nouveau Système de Comptes Nationaux et ne sont pas, de ce fait, comparables à ceux des années précédentes.

La rubrique 2000 comprend certaines contributions volontaires.

La rubrique 4220 correspond à la rémunération de la garantie de l'État accordée aux caisses d'épargne.

Source : Compte général de l'Administration des finances pour les chiffres de recettes fiscales. OSCE pour les chiffres de sécurité sociale de 1965 à 1969, et SEC pour les années suivantes.

Notes : Year ending 31st December.

From 2002, data are on accrual basis.

The tax revenues for Germany refer to the old Länder until 1990 and to all Germany beginning in 1991.

Heading 1000: In the years up to 2000, the revenues shown take into account the whole amount of non-wastable tax credits including that part paid out by the tax authorities which should, under the OECD criteria, be treated as expenditure. From 2001, the data necessary to make the adjustment have become available and the revenue figures comply with the OECD criteria from that year. The impact of this change is shown in Table 5 in Chapter 1 of this Report.

Heading for non-wastable tax credits against 1110 comprise child tax credits (paid out of wage tax revenue), tax credits for owner occupied housing (paid out of assessed income tax revenue) and investment tax credits for unincorporated businesses (for investment in former East Germany; paid out of assessed income tax revenue).

Heading for non-wastable tax credits against 1210 are investment tax credits for incorporated businesses (for investment in former East Germany; paid out of corporate income tax revenue).

Table 4.13. **Hungary/Hongrie** (cont./suite)
Details of tax revenue/Recettes fiscales détaillées

Notes : Year ending 31st December.

From 2002, data are on accrual basis.

Heading 5121: The aggregate figure for excise tax revenues is on a cash basis. Revenue from specific excises is in several cases reported on an accrual basis.

Tax base for «Environment petrol tax» is broader than petrol only.

Heading 5123: Part of environmentally related payments is attributable to Local government. It is not possible to present a more detailed breakdown of these figures.

National Accounts: Taxes and all social contributions	34 704	63 343	49 180	49 474	51 046	53 155	57 707

Notes : The data for personal income tax revenues differs from the ESA2010 presentation as payable tax credits are excluded, in accordance with the presentation in earlier editions of the publication.

The data for years 1965 to 1973 are on fiscal year basis (commencing on 1st April) and are therefore not strictly comparable with the data for later years, which are on a calendar year basis.

From 1998, data are on accrual basis.

Heading 1200: Capital gains taxes paid by corporations are included in heading 1210.

Heading 2100: Includes contributions by self-employed and certain voluntary contributions.

Heading 2200: Since 1976, income tax paid by corporations and corporation profits tax have been replaced by corporation tax.

Heading 5111: Includes arrears of the wholesale and turnover taxes.

Tax receipts in 1988 were inflated by the success of the new arrangements for assessment and collection of tax. These arrangements included an amnesty for tax arrears paid by 30th September. This amnesty waived penalties and interest charge tax. It resulted in payments of 631 millions of euros spread across the main tax headings.

Notes : The tax year ends on 31st December

As from 2000, revenues data are computed on accrual basis.

As from 1997, revenues data are based on data provided to the European Union, as for the Treaty of Maastricht excessive deficit procedure.

Section 6000: Regional Tax on Productive Activities (IRAP); it is a tax on the value of production, therefore its taxable base is different from other groups tax bases.

Regarding the section «Taxes excluded National Accounts» the item «Others» includes: tax on the public areas utilisation and tax on the collection and disposal of waste water.

Table 4.18. **Japan/Japon** (cont./suite)
Details of tax revenue/Recettes fiscales détaillées

Notes : Data are on a fiscal year basis beginning 1st April.

From 1990, data are on accrual basis.

The figures for different groups of taxes are reported on different reporting bases, namely: Social security contributions (heading 2000): in principle, accrual basis; Central government taxes: accrual basis (revenues accrued during the fiscal year plus cash receipts collected before the end of May (the end of April until 1977); Local government taxes: accrual basis (due to be paid during the fiscal year and cash receipts collected before the end of May).

The Japanese authorities take the view that the Enterprise tax (classified in 1100 and 1200) and the Mineral product tax (classified in 5121) should be classified in heading 6000, since under articles 72 and 519 of the Local Tax Law these taxes are regarded as levies on the business or mining activity itself.

Heading 2000 includes some unidentifiable voluntary contributions.

Heading 2300: Includes contributions to the National pension, National Health Insurance and the Farmer's pension fund. Contributions to the Farmer's pension fund are not available for the years before 1999.

Heading 4100: Municipal property tax, includes Prefectural property tax from 1990 to 1994, because data is not available to provide a breakdown.

Heading 5121: Municipal tobacco tax, includes Prefectural tobacco tax from 1990 to 1994, because data is not available to provide a breakdown.

Heading 5121: In sub-item Petroleum and coal tax, the data before 2003 refer to petroleum tax.

Taxes excluded from National Accounts
Difference in treatment of tax credits
Capital transfer for uncollected revenue
Voluntary social security contributions
Miscellaneous differences
National Accounts: Taxes and actual social contributions
Imputed social contributions
National Accounts: Taxes and all social contributions

Notes : Year ending 31st December.

Data are on cash basis.

Heading 2000: From 1997, the contributions to the three funds (civil servant pension fund, private school teachers pension fund and medical insurance fund) are classified as security social contributions. The reasons for the change are that the contributions either became mandatory or the fund started to be managed by public authorities in that year, thereby meeting the OECD definition of social security contributions.

Heading 2200: From 2007, this includes long-term care insurance.

Source : Ministry of Finance and Economy, Ministry of Home Affairs.

Notes : Année civile se terminant le 31 décembre.

À partir de 1990, les données sont sur la base des droits constatés.

À la rubrique 2000, la différence entre le total des cotisations de sécurité sociale et celles recueillies par les parastataux de la sécurité sociale correspond au prélèvement pour la péréquation des pensions opéré sur les rémunérations et les pensions des salariés et anciens agents de P&T de la Caisse d'épargne de l'État; ces établissements ressortissant l'un au secteur «sociétés et quasi-sociétés non financières» et l'autre à celui des institutions de crédit.

Notes : Year ending 31st December.

From 1999, data are on accrual basis.

Heading 2000: From 1998, the figures include some voluntary contributions and the breakdown between premiums paid by employees (2100) and by self-employed/non-employed has been estimated. This is also the case for the breakdown between premiums paid on a payroll or on an income tax basis for those years where both apply.

Heading 4100: From 1992, there was a structural break in the data for the «municipal immovable property tax». The tax ceased to be collected by the central government at that time and the figures are presented on a different type of statistical registration (no longer cash basis).

Heading 5110: Includes 358 millions of euros (1969) and 186 millions of euros (1970) in respect of deduction of turnover tax on stocks existing at 1st January 1969.

Heading 5213: Small amounts (less than 2.3 millions euros) of hunting and fishing licence receipts which should be classified here have been omitted.

Source : Social security contributions and local taxes: Central Bureau of Statistics; other taxes: Ministry of Finance.

Table 4.24. New Zealand/Nouvelle-Zélande (cont./suite)
 Details of tax revenue/Recettes fiscales détaillées

Notes : For the years before 1989, data are on a fiscal year basis ending 31st March. The figures provided for 1989 and onwards relate to the financial year ending 30th June of the following year.

From 1993, data are on accrual basis.

Heading 1000: Tax credits to exporters under the export incentives schemes are non-wastable, but that part of the excess of tax liability paid out to taxpayers is not identifiable.

Heading 1100: The figures up to 1969 include revenues collected by a social security income tax. The base of this tax was the same as the ordinary income tax base and the two have now been incorporated into a single income tax.

Heading 5121: From October 1986, incorporates that portion of the selective impost on wine, spirits, tobacco and motor vehicles which was formerly collected and reported as sales tax. The revenue collected on those imported goods which are subject to the equivalent of the domestic excise has been classified as excise duty. In this respect, there is a discontinuity between the excises recorded before and after October 1986.

Heading 5210: The other local authority licence fees include some small items which could be regarded as non-tax revenues.

Heading for non-wastable tax credits 1110 comprises four Family assistance tax credits. The total in item 1100 is net of the tax expenditure component, but not net of the transfer component.

Notes : Year ending 31st December.

From 2000, data are on accrual basis.

From 1981, the figures take into account the classification procedures set out in the *OECD Interpretative Guide*. Consequently, they are not completely comparable with the figures for earlier years though the amounts involved are quite small.

Heading 1000: Includes a tax on property «Contribucion Rustica», which would be more appropriately classified in 4110, and the «Licencia fiscal industrial and professionals», which, because it is a tax levied by reference to the size of the firm, energy input, etc, would be more appropriately classified in 6000. The data necessary to provide a breakdown is not available.

All subdivisions are estimated.

Heading 2300: Contributions paid by self-employed were shown under heading 2100 until 1982.

Heading 4100: Most of these receipts fall under 4110.

Heading 4400: In 1988, revenues from taxes on legal Acts issued by Autonomous Communities (Local) are included in 4400.

Heading 5121 comprises certain local levies which may include non-tax revenues.

Source : Informacion Estadística del Ministerio de Hacienda (for national taxes); Cuentas de las Administraciones Publicas (for local taxes and social security) both published by Secretaria General Tecnica del Ministerio de Hacienda.

National Accounts: Taxes and all social contributions	1 180 342	1 507 069	1 476 994	1 584 030	1 597 050	1 647 812	1 707 608

Notes : Year ending 31st December.

From 2000, data are on accrual basis.

Figures prior to 1970 are not strictly comparable with those of later years, though the amounts involved are insignificant.

Heading 1000: Receipts are on accrual and not on a cash basis for all years.

Heading 2000 includes some voluntary contributions.

Notes : Année civile se terminant le 31 décembre.

Les données sont sur la base des encaissements.

Les chiffres antérieurs à 1970 ne sont pas strictement comparables avec ceux des années suivantes qui ont été légèrement révisés.

À compter de 1985, les « Impôts paroissiaux » ne sont plus reportés dans ces statistiques.

À la rubrique 1100 : les paiements effectués en contrepartie de l'exemption du service militaire pourraient être classés dans les recettes non fiscales.

La rubrique 2000 (Cotisations de sécurité sociale) a été révisée depuis 1985 pour tenir compte de la sectorisation des administrations publiques retenue dans le cadre du passage aux Comptes nationaux SEC95. De ce fait, les cotisations à l'assurance maladie et à la Caisse nationale suisse contre les accidents sont maintenant exclues de la rubrique 2000.

Voluntary social security contributions
Miscellaneous differences
National Accounts: Taxes and actual social contributions
Imputed social contributions
National Accounts: Taxes and all social contributions

Notes : From 1982, the data are based on the fiscal year ending 31st December. Before that, the data are on a fiscal year basis beginning 1st March.

Revenue is reported on a cash basis, except for social security contributions which are reported on an assessment basis.

The figures under the local tax collections include taxes under «Municipalities Revenues Law» and Property tax. They also include transfers to the local authorities from central budget tax revenues under the revenue sharing system.

Heading 2000: Before 2003, contributions to some private social security schemes are included in this heading.

Source : Bulletin of national accounts and the Budget revenue Bulletin.

Notes : Year ending 31st December.

From 1990, data are on accrual basis.

Heading 1210: The corporate tax figures include company income tax from 1990 onwards.

Heading 2000: Includes some voluntary contributions which cannot be separately identified.

Heading 6200: The community charge replaced domestic rates in Scotland in April 1989 and was extended to England and Wales in April 1990. This tax has been classified in heading 6200 as it is a lump-sum tax levied on each adult in a household (domestic rates are classified in heading 4100).

Headings for non-wastable tax credits 1110 and 1210 are consistent with the guidelines, and the figures in the data are treated accordingly. The following method is adopted separately for Working Families «Tax Credit and Disabled Persons Tax Credit» paid from 1999 to 2003. For each calendar, a random sample of awards over-lapping the quarter is taken. Each recipient family's income tax liability for the fiscal year within which the quarter falls is calculated, based on the earned income reported for the award (uprated to the middle of the overlap period). And the result multiplied by the number of days in the overlap period divided by 365. The tax expenditure component is defined as the minimum of this amount and the total amount of award paid in the overlap period. The total amount of award paid and the tax expenditure component are each summed over the sample cases, and the ratio is taken as the tax expenditure ration for the quarter. From 2003, the equivalent breakdown for Child and Working tax credits is based on household survey data. Survey data is used to estimate the breakdown into the tax expenditure and the transfer components for the other smaller tax credits.

Notes : From 1990, data are on a year ending 31st December basis. For years up to and including 1976, the dated covered fiscal years ending 30th June. Between 1977 and 1989, Federal government data covered fiscal years ending 30th September and State & Local government data covered fiscal years ending 30th June.

From 1990, data are on accrual basis. There are no separate estimates for the State and Local capital gains tax revenues.

Heading 5121: In 1994 through 1996, some Federal excise taxes formerly shown separately were included in «Other taxes, excises and undistributed, Federal government».

Source : Federal estimates are derived from the US Budget, the Final Monthly Treasury Statement and the Annual Report of the US Treasury Department; the State and Local estimates are derived from Government Finances, published by the Bureau of the Census.

4.3. Social security contributions and payroll taxes paid by Government

During the revision of the Interpretative Guide in 1984, the question arose of how to treat taxes paid by government. The two most prominent examples of such taxes are social security contributions and payroll taxes paid by government in respect of its employees. After a long discussion, it was decided that the data shown in this publication should continue to include taxes paid by government (see §5 of the *Interpretative Guide* in Annex A).

Whilst it was recognised that for certain purposes (e.g. to show the cash flow to the government sector from the private sector) it would be appropriate to eliminate taxes paid by one sector of government to another or tax payments between different units of the same sector of government, the view was taken that to record tax flows in the context of the economy as a whole required that taxes paid by government should be included in the data. This treatment ensures that the different resource flows of an economy, including the calculation of the output of government, are measured consistently in after-tax units. Nevertheless, it was decided that data on identifiable taxes paid by government should be separately identified in a memorandum item and this is the purpose of the country tables which follow.

The data that are reproduced in the following tables refer to actual compulsory payments made by general government in respect of their employees. Fictive, voluntary and imputed contributions are excluded from these data. The definitions of social security contributions, payroll taxes and general government are those set out in §35 to §41, §42 and §3 to §4 of the *Interpretative Guide*. Information on the other taxes paid by government (namely property taxes and consumption taxes) is not available in most countries, although it is believed that in all countries taxes based upon payroll are the most important taxes paid by government. In many cases, the data are estimates and are not always constructed on a basis consistent with that used in the main tables.

4.3. Les cotisations de sécurité sociale et impôts sur les salaires payés par les administrations publiques

Lors de la révision du *Guide d'interprétation* en 1984, la question s'est posée de savoir comment il convenait de traiter les impôts acquittés par les administrations. Les deux exemples les plus marquants d'impôts de ce type sont les cotisations de sécurité sociale et les impôts sur les salaires acquittés par les administrations au titre de leurs agents. Après un échange de vues approfondi, il a été décidé que les données présentées dans cette publication continueraient d'inclure les impôts acquittés par les administrations (voir le §5 du *Guide d'interprétation* dans l'Annexe A).

Alors qu'il a été admis qu'à certaines fins (par exemple, pour mesurer le flux de paiements allant du secteur privé au secteur des administrations), il conviendrait d'exclure les impôts payés par un secteur de l'administration à un autre ou les impôts acquittés entre les différentes unités d'un même secteur de l'administration, il a été décidé que les impôts acquittés par les administrations devaient être inclus dans les données lorsque l'on comptabilise tous les flux d'impôts de l'ensemble de l'économie. Cette prise en compte permet d'être sûr que les différents flux de ressources d'une économie, y compris la valeur de la production des administrations, sont bien mesurés de façon cohérente nette d'impôt.

Il a été toutefois décidé que les données sur les impôts acquittés par les administrations et que l'on pouvait identifier isolément seraient présentées séparément dans un poste pour mémoire et c'est l'objet des tableaux par pays qui suivent.

Les données reproduites dans les tableaux suivants ont trait aux montants effectifs versés par les administrations publiques au titre de leurs agents. Les cotisations fictives, volontaires et imputées sont exclues de ces données. Les définitions des cotisations de sécurité sociale, des impôts sur les salaires et des administrations publiques correspondent aux définitions données aux §35 à §41, §42, et §3 à §4 du *Guide d'interprétation*. Les informations sur les autres impôts payés par les administrations (à savoir impôts sur la propriété et impôts sur la consommation) ne sont pas disponibles pour la plupart des pays, même s'il semble bien que, dans tous les pays, les impôts assis sur les salaires sont les impôts les plus importants qu'acquittent les administrations. Dans beaucoup de cas, les données sont estimées et ne sont pas toujours établies sur une base compatible avec celle utilisée dans les tableaux principaux.

- The multi-jurisdictional sector contains units where jurisdiction is shared between two or more governments, or classification of a unit to a jurisdiction is otherwise unclear. The main type of units currently falling into this category is public universities.
- There is a break in the series in 1990. The data are based on ESA 2010 from that year onwards.
- Le secteur multi-juridictionnel contient des unités où la juridiction est partagée entre deux administrations publiques au moins, ou contient des unités dont le classement dans une juridiction n'est pas clair. Les universités publiques sont le principal type d'unités appartenant actuellement à cette catégorie.
- Il y a une rupture dans les séries en 1990. À partir de cette année, les données se fondent sur le SEC 2010.

Chapter 5

**Tax revenues
by subsectors of general government**

Chapitre 5

**Recettes fiscales
par sous-secteur d'administration**

The tax data presented in this part of the Report have been attributed to the sub-sectors of general government identified in Section A.12 of the Interpretative guide (see Annex A) and the attribution criteria used are those set out in that guide.

The column «supranational» reports the customs duties collected by the twenty-one EU member states on behalf of the European Union.

Les données présentées dans cette partie ont été réparties entre les sous-secteurs d'administration identifiés dans la section A.12 du Guide d'interprétation (voir Annexe A) et les critères d'attribution utilisés sont ceux indiqués dans cette annexe.

La colonne « supranationale » indique les droits de douane collectés par les vingt et un pays membres pour le compte de l'Union européenne.

Notes : Excluding social security contributions accruing to social security funds./Sont exclues les cotisations de sécurité sociale versées aux administrations de sécurité sociale.

1. The total tax revenue has been reduced by the amount of any capital transfer that represents uncollected taxes. The capital transfer has been allocated between tax headings in proportion to the reported tax revenue./Le total des recettes fiscales a été diminué du montant de tout transfert en capital représentant les impôts non perçus. Le transfert en capital a été réparti entre les différentes rubriques en proportion des recettes fiscales.

2. These comprise only social security contributions accruing to central government./Ne sont incluses que les cotisations de sécurité sociale versées à l'administration centrale.

1. From 1985, social security contributions are classified using the SNA definition of Social security Funds which means that a proportion of these payments are shown under the heading of Central Government. Prior to that year, all such payments were classified under the heading of Social Security Funds.

A.1. The OECD Classification of taxes

1. 1000 Taxes on income, profits and capital gains
 - 1100 Taxes on income, profits and capital gains of individuals
 - 1110 On income and profits
 - 1120 On capital gains
 - 1200 Corporate taxes on income, profits and capital gains
 - 1210 On income and profits
 - 1220 On capital gains
 - 1300 Unallocable as between 1100 and 1200
2. 2000 Social security contributions
 - 2100 Employees
 - 2110 On a payroll basis
 - 2120 On an income tax basis
 - 2200 Employers
 - 2210 On a payroll basis
 - 2220 On an income tax basis
 - 2300 Self-employed or non-employed
 - 2310 On a payroll basis
 - 2320 On an income tax basis
 - 2400 Unallocable as between 2100, 2200 and 2300
 - 2410 On a payroll basis
 - 2420 On an income tax basis
3. 3000 Taxes on payroll and workforce
4. 4000 Taxes on property
 - 4100 Recurrent taxes on immovable property
 - 4110 Households
 - 4120 Other
 - 4200 Recurrent taxes on net wealth
 - 4210 Individual
 - 4220 Corporate
 - 4300 Estate, inheritance and gift taxes
 - 4310 Estate and inheritance taxes
 - 4320 Gift taxes
 - 4400 Taxes on financial and capital transactions
 - 4500 Other non-recurrent taxes on property
 - 4510 On net wealth
 - 4520 Other non-recurrent taxes
 - 4600 Other recurrent taxes on property
5. 5000 Taxes on goods and services

- 5100 Taxes on production, sale, transfer, leasing and delivery of goods and rendering of services
 - 5110 General taxes
 - 5111 Value added taxes
 - 5112 Sales taxes
 - 5113 Other general taxes on goods and services
 - 5120 Taxes on specific goods and services
 - 5121 Excises
 - 5122 Profits of fiscal monopolies
 - 5123 Customs and import duties
 - 5124 Taxes on exports
 - 5125 Taxes on investment goods
 - 5126 Taxes on specific services
 - 5127 Other taxes on international trade and transactions
 - 5128 Other taxes on specific goods and services
 - 5130 Unallocable as between 5110 and 5120
- 5200 Taxes on use of goods, or on permission to use goods or perform activities
 - 5210 Recurrent taxes
 - 5211 Paid by households in respect of motor vehicles
 - 5212 Paid by others in respect of motor vehicles
 - 5213 Other recurrent taxes
 - 5220 Non-recurrent taxes
- 5300 Unallocable as between 5100 and 5200
- 6. 6000 Other taxes
 - 6100 Paid solely by business
 - 6200 Paid by other than business or unidentifiable

A.2. Coverage

General criteria

1. In the OECD classification the term “taxes” is confined to compulsory unrequited payments to general government. Taxes are unrequited in the sense that benefits provided by government to taxpayers are not normally in proportion to their payments.
2. The term “tax” does not include fines, penalties and compulsory loans paid to government. Borderline cases between tax and non-tax revenues in relation to certain fees and charges are discussed in §9-12.
3. General government consists of the central administration, agencies whose operations are under its effective control, state and local governments and their administrations, certain social security schemes and autonomous governmental entities, excluding public enterprises. This definition of government follows that of the 2008 *System of National Accounts (SNA)*,¹ where the general government sector and its sub-sectors are defined in Chapter 4, Section F, pages 80-84.

4. Compulsory payments to supra-national bodies and their agencies are no longer included as taxes as from 1998, with some exceptions. However, custom duties collected by EU member states on behalf of the European Union are still identified as memorandum items and included in overall tax revenue amounts in the country tables (Chapter 4) of the country in which they are collected (see §94). In countries where the church forms part of general government church taxes are included, provided they meet the criteria set out in §1 above. As the data refer to receipts of general government, levies paid to non-government bodies, welfare agencies or social insurance schemes outside general government, trade unions or trade associations, even where such levies are compulsory, are excluded. Compulsory payments to general government earmarked for such bodies are, however, included, provided that the government is not simply acting in an agency capacity.² Profits from fiscal monopolies are distinguished from those of other public enterprises and are treated as taxes because they reflect the exercise of the taxing power of the state by the use of monopoly powers (see §61-63), as are profits received by the government from the purchase and sale of foreign exchange at different rates (see §69).

5. Taxes paid by governments (e.g., social security contributions and payroll taxes paid by governments in their capacity as an employer, consumption taxes on their purchases or taxes on their property) are not excluded from the data provided. However, where it is possible to identify the amounts of revenue involved,³ they are shown in Section 4.3 of this Report.

6. The relationship between this classification and that of the System of National Accounts (SNA) is set out in Sections A.9 and A.11 below. Because of the differences between the two classifications, the data shown in national accounts are sometimes calculated or classified differently from the practice set out in this guide. These and other differences are mentioned where appropriate (e.g., in §25 below) but it is not possible to refer to all of them. There may also be some differences between this classification and that employed domestically by certain national administrations (e.g., see §10 below), so that OECD and national statistics data may not always be consistent: any such differences, however, are likely to be very slight in terms of amounts of revenues involved.

Social security contributions

7. Compulsory social security contributions, as defined in §34 below, paid to general government, are treated here as tax revenues. Being compulsory payments to general government they clearly resemble taxes. They may, however, differ from other taxes in that the receipt of social security benefits depends, in most countries, upon appropriate contributions having been made, although the size of the benefits is not necessarily related to the amount of the contributions. Better comparability between countries is obtained by treating social security contributions as taxes, but they are listed under a separate heading so that they can be distinguished in any analysis.

8. Social security contributions which are either voluntary or not payable to general government (see §1) are not treated as taxes, though in some countries, as indicated in the country footnotes, there are difficulties in eliminating voluntary contributions and certain compulsory payments to the private sector. Imputed social security contributions are also not treated as taxes.

Fees, user charges and licence fees

9. Apart from vehicle licence fees, which are universally regarded as taxes, it is not easy to distinguish between those fees and user charges which are to be treated as taxes

and those which are not, since, whilst a fee or charge is levied in connection with a specific service or activity, the strength of the link between the fee and the service provided may vary considerably, as may the relation between the amount of the fee and the cost of providing the service. Where the recipient of a service pays a fee clearly related to the cost of providing the service, the levy may be regarded as required and under the definition of §1 would not be considered as a tax. In the following cases, however, a levy could be considered as “unrequited”:

- a) where the charge greatly exceeds the cost of providing the service;
- b) where the payer of the levy is not the receiver of the benefit (e.g., a fee collected from slaughterhouses to finance a service which is provided to farmers);
- c) where government is not providing a specific service in return for the levy which it receives even though a licence may be issued to the payer (e.g., where the government grants a hunting, fishing or shooting licence which is not accompanied by the right to use a specific area of government land);
- d) where benefits are received only by those paying the levy but the benefits received by each individual are not necessarily in proportion to his payments (e.g., a milk marketing levy paid by dairy farmers and used to promote the consumption of milk).

10. In marginal cases, however, the application of the criteria set out in §1 can be particularly difficult. The solution adopted – given the desirability of international uniformity and the relatively small amounts of revenue usually involved – is to follow the predominant practice among tax administrations rather than to allow each country to adopt its own view as to whether such levies are regarded as taxes or as non-tax revenue.⁴

11. A list of the main fees and charges in question and their normal⁵ treatment in this publication is as follows:

Non-tax revenues: court fees; driving licence fees; harbour fees; passport fees; radio and television licence fees where public authorities provide the service.

Taxes within heading 5200: permission to perform such activities as distributing films; hunting, fishing and shooting; providing entertainment or gambling facilities; selling alcohol or tobacco; permission to own dogs or to use or own motor vehicles or guns; severance taxes.

12. In practice, it may not always be possible to isolate tax receipts from non-tax revenue receipts when they are recorded together. If it is estimated that the bulk of the receipts derive from non-tax revenues, the whole amount involved is treated as a non-tax revenue; otherwise, such government receipts are included and classified according to the rules provided in §27.

Royalties

13. Royalty payments for the right to extract oil and gas or to exploit other mineral resources are normally regarded as non-tax revenues since they are property income from government-owned land or resources.

Fines and penalties

14. In principle, fines and penalties charged on overdue taxes or penalties imposed for the attempted evasion of taxes should not be recorded as tax revenues. However, it may not be possible to separate payments of fines or other penalties from the revenues from the

taxes to which they relate. In this case the fines and penalties relating to a particular tax are recorded together with the revenues from that tax and fines and penalties paid with revenue from unidentifiable taxes are classified as other taxes in category 6000. Fines not relating to tax offences (e.g., for parking offences), or not identifiable as relating to tax offences, are also not treated as tax revenues.

A.3. Basis of reporting

Accrual reporting

15. The data reported in this publication for recent years are predominantly recorded on an accrual basis, i.e. recorded at the time that the tax liability was created. Further information is provided in the footnotes to the country table in Chapter 4 of the Report.

16. However, data for earlier years are still predominantly recorded on a cash basis, i.e. at the time at which the payment was received by government. Thus, for example, taxes withheld by employers in one year but paid to the government in the following year and taxes due in one year, but actually paid in the following year are both included in the receipts of the second year. Corrective transactions, such as refunds, repayments and drawbacks, are deducted from gross revenues of the period in which they are made.

17. Data on tax revenues are recorded without offsets for the administrative expenses connected with tax collection. Similarly, where the proceeds of tax are used to subsidise particular members of the community, the subsidy is not deducted from the yield of the tax, though the tax may be shown net of subsidies in the national records of some countries.

18. As regards fiscal monopolies (heading 5122), only the amount actually transferred to the government is included in government revenues. However, if any expenditures of fiscal monopolies are considered to be government expenditures (e.g., social expenditures undertaken by fiscal monopolies at the direction of the government) they are added back for the purpose of arriving at tax revenue figures (see §61).

The distinction between tax and expenditure provisions⁶

19. Because this publication is concerned only with the revenue side of government operations, no account being taken of the expenditure side, a distinction has to be made between tax and expenditure provisions. Normally, there is no difficulty in making this distinction as expenditures are made outside the tax system and the tax accounts and under legislation separate from the tax legislation. In borderline cases, cash flow is used to distinguish between tax provisions and expenditure provisions. Insofar as a provision affects the flow of tax payments from the taxpayer to the government, it is regarded as a tax provision and is taken into account in the data shown in this publication. A provision which does not affect this flow is seen as an expenditure provision and is disregarded in the data recorded in this publication.

20. Tax allowances, exemptions and deductions against the tax base clearly affect the amount of tax paid to the government and are therefore considered as tax provisions. At the other extreme, those subsidies which cannot be offset against tax liability and which are clearly not connected with the assessment process, do not reduce tax revenues as recorded in this publication. Tax credits are amounts deductible from tax payable (as distinct from deductions from the tax base). Two types of tax credits are distinguished, those (referred to here as “wastable” tax credits) which are limited to the amount of the tax liability and therefore cannot give rise to a payment by the authorities to the taxpayer, and

those (referred to as “non-wastable” tax credits) which are not so limited, so that the excess of the credit over the tax liability can be paid to the taxpayer.⁷ A wastable tax credit, like a tax allowance, clearly affects the amount of tax paid to the government, and is therefore considered as a tax provision. The practice followed for non-wastable tax credits⁸ is to distinguish between the “tax expenditure component”,⁹ which is that portion of the credit that is used to reduce or eliminate a taxpayer’s liability, and the “transfer component”, which is the portion that exceeds the taxpayer’s liability and is paid to that taxpayer. Reported tax revenues should be reduced by the amount of the tax expenditure component but not by the amount of the transfer component. In addition, the amounts of the tax expenditure and transfer components should be reported as memorandum items in the country tables. Countries that are unable to distinguish between the tax expenditure and transfer components should indicate whether or not the tax revenues have been reduced by the total of these components, and provide any available estimates of the amounts of the two components. Further information is given in Chapter 2 of the Report, which illustrates the effect of alternative treatments of non-wastable tax credits on Tax to GDP.

Calendar and fiscal years

21. National authorities whose fiscal years do not correspond to the calendar year show data, where possible, on a calendar year basis to permit maximum comparability with the data of other countries. There remain a few countries where data refer to fiscal years. For these the GDP data used in the comparative tables also correspond to the fiscal years.

A.4. General classification criteria

The main classification criteria

22. The classification of receipts among the main headings (1000, 2000, 3000, 4000, 5000 and 6000) is generally governed by the base on which the tax is levied: 1000 income, profits and capital gains; 2000 and 3000 earnings, payroll or number of employees; 4000 property; 5000 goods and services; 6000 multiple bases, other bases or unidentifiable bases. Where a tax is calculated on more than one base, the receipts are, where possible, split among the various headings (see §27 and §77). The headings 4000 and 5000 cover not only taxes where the tax base is the property, goods or services themselves but also certain related taxes. Thus, taxes on the transfer of property are included in 4400¹⁰ and taxes on the use of goods or on permission to perform activities in 5200. In headings 4000 and 5000, a distinction is made in certain sub-headings between recurrent and non-recurrent taxes: recurrent taxes are defined as those levied at regular intervals (usually annually) and non-recurrent taxes are levied once and for all (see also §42 to §45, §48, §49 and §75 for particular applications of this distinction).

23. Earmarking of a tax for specific purposes does not affect the classification of tax receipts. However, as explained in §34 on the classification of social security contributions, the conferment of an entitlement to social benefits is crucial to the definition of the 2000 main heading.

24. The way that a tax is levied or collected (e.g., by use of stamps) does not affect classification.

Classification of taxpayers

25. In certain sub-headings distinctions are made between different categories of taxpayers. These distinctions vary from tax to tax:

a) Between individuals and corporations in relation to income and net wealth taxes

The basic distinction is that corporation income taxes, as distinct from individual income taxes, are levied on the corporation as an entity, not on the individuals who own it, and without regard to the personal circumstances of these individuals. The same distinction applies to net wealth taxes on corporations and those on individuals. Taxes paid on the profits of partnerships and the income of institutions, such as life insurance or pension funds, are classified according to the same rule. They are classified as corporate taxes (1200) if they are charged on the partnership or institution as an entity without regard to the personal circumstances of the owners. Otherwise, they are treated as individual taxes (1100). Usually, there is different legislation for the corporation taxes and for the individual taxes.¹¹ The distinction made here between individuals and corporations does not follow the sector classification between households, enterprises, and so on of the System of National Accounts for income and outlay accounts. The SNA classification requires certain unincorporated businesses¹² to be excluded from the household sector and included with non-financial enterprises and financial institutions. The tax on the profits of these businesses, however, cannot always be separated from the tax on the other income of their owners, or can be separated only on an arbitrary basis. No attempt at this separation is made here and the whole of the individual income tax is shown together without regard to the nature of the income chargeable.

b) Between households and others in relation to taxes on immovable property

Here the distinction is that adopted by the SNA for the production and consumption expenditure accounts. The distinction is between households as consumers (i.e. excluding non-incorporated business) on the one hand and producers on the other hand. However, taxes on dwellings occupied by households, whether paid by owner-occupiers, tenants or landlords, are classified under households. This follows the common distinction made between taxes on domestic property versus taxes on business property. Some countries are not, however, in a position to make this distinction.

c) Between households and others in relation to motor vehicle licences

Here the distinction is between households as consumers on the one hand and producers on the other, as in the production and consumption expenditure accounts of the SNA.

d) Between business and others in relation to the residual taxes (6000)

The distinction is the same as in c) above between producers on the one hand and households as consumers on the other hand. Taxes which are included under the heading 6000 because they involve more than one tax base or because the tax base does not fall within any of the previous categories but which are identifiable as levyable only on producers and not on households are included under "business". The rest of the taxes which are included under the heading 6000 are shown as 'other' or non-identified.

Surcharges

26. Receipts from surcharges in respect of particular taxes are usually classified with the receipts from the relevant tax whether or not the surcharge is temporary. If, however, the

surcharge has a characteristic which would render it classifiable in a different heading of the OECD list, receipts from the surcharge are classified under that heading separately from the relevant tax.

Unidentifiable tax receipts and residual sub-headings

27. A number of cases arise where taxes cannot be identified as belonging entirely to a heading or sub-heading of the OECD classification and the following practices are applied in such cases:

- a) the heading is known, but it is not known how receipts should be allocated between sub-headings: receipts are classified in the appropriate residual sub-heading (1300, 2400, 4520, 4600, 5130, 5300 or 6200);
- b) it is known that the bulk of receipts from a group of taxes (usually local taxes) is derived from taxes within a particular heading or sub-heading, but some of the taxes in the group whose amount cannot be precisely ascertained may be classifiable in other headings or sub-headings: receipts are shown in the heading or sub-heading under which most of the receipts fall;
- c) neither the heading nor sub-heading of a tax (usually local) can be identified: the tax is classified in 6200 unless it is known that it is a tax on business in which case it is classified in 6100.

A.5. Commentaries on items of the list

1000 – Taxes on income, profits and capital gains

28. This heading covers taxes levied on the net income or profits (i.e. gross income minus allowable tax reliefs) of individuals and enterprises. Also covered are taxes levied on the capital gains of individuals and enterprises, and gains from gambling.

29. Included in the heading are:

- a) taxes levied predominantly on income or profits, though partially on other bases. Taxes on various bases which are not predominantly income or profits are classified according to the principles laid down in §27 and §77;
- b) taxes on property, which are levied on a presumed or estimated income as part of an income tax [see also §42a), c) and d)];
- c) compulsory payments to social security fund contributions that are levied on income but do not confer an entitlement to social benefits; when such contributions do confer an entitlement to social benefits, they are included in heading 2000 (see §34);
- d) receipts from integrated scheduler income tax systems are classified as a whole in this heading, even though certain of the scheduler taxes may be based upon gross income and may not take into account the personal circumstances of the taxpayer.

30. The main subdivision of this heading is between levies on individuals (1100) and those on corporate enterprises (1200). Under each subdivision a distinction is made between taxes on income and profits (1110 and 1210), and taxes on capital gains (1120 and 1220). If certain receipts cannot be identified as appropriate to either 1100 or 1200, or if in practice this distinction cannot be made (e.g., because there are no reliable data on the recipients of payments from which withholding taxes are deducted) they are classified in 1300 as not-allocable.

Treatment of credits under imputation systems

31. Under imputation systems of corporate income tax, a company's shareholders are wholly or partly relieved of their liability to income tax on dividends paid by the company out of income or profits liable to corporate income tax. In countries with such systems,¹³ part of the tax on the company's profits is available to provide relief against the shareholders' own tax liability. The relief to the shareholder takes the form of a tax credit, the amount of which may be less than, equal to, or more than the shareholder's overall tax liability. If the tax credit exceeds this tax liability the excess may be payable to the shareholder. As this type of tax credit is an integral part of the imputation system of corporate income tax, any payment to the shareholders is treated as a repayment of tax and not as expenditure (compare the treatment of other tax credits described in §20).

32. As the tax credit under imputation systems (even when exceeding tax liability) is to be regarded as a tax provision, the question arises whether it should be deducted from individual income tax receipts (1110) or corporate income tax receipts (1210). In this Report, the full amount of corporate income tax paid is shown under 1210 and no imputed tax is included under 1110. Thus, the full amount of the credit reduces the amount of 1110 whether the credit results in a reduction of personal income tax liability or whether an actual refund is made because the credit exceeds the income tax liability (where, however, such tax credits are deducted from corporation tax in respect of dividends paid to corporations the amounts are deducted from the receipts of 1210).

1120 and 1220 – Taxes on capital gains

33. These sub-headings comprise taxes imposed on capital gains, 1120 covering those levied on the gains of individuals and 1220 those levied on the gains of corporate enterprises, where receipts from such taxes can be separately identified. In many countries this is not the case and the receipts from such taxes are then classified with those from the income tax. Heading 1120 also includes taxes on gains from gambling.

2000 – Social security contributions

34. Classified here are all compulsory payments that confer an entitlement to receive a (contingent) future social benefit. Such payments are usually earmarked to finance social benefits and are often paid to institutions of general government that provide such benefits. However, such earmarking is not part of the definition of social security contributions and is not required for a tax to be classified here. However, conferment of an entitlement is required for a tax to be classified under this heading. So, levies on income or payroll that are earmarked for social security funds but do not confer an entitlement to benefit are excluded from this heading and shown under personal income taxes (1100) or taxes on payroll and workforce (3000). Taxes on other bases, such as goods and services, which are earmarked for social security benefits are not shown here but are classified according to their respective bases because they generally confer no entitlement to social security benefits.

35. Contributions for the following types of social security benefits would, *inter alia*, be included: unemployment insurance benefits and supplements, accident, injury and sickness benefits, old-age, disability and survivors' pensions, family allowances, reimbursements for medical and hospital expenses or provision of hospital or medical services. Contributions may be levied on both employees and employers.

36. Contributions may be based on earnings or payroll (“on a payroll basis”) or on net income after deductions and exemptions for personal circumstances (“on an income tax basis”), and the revenues from the two bases should be separately identified if possible. However, where contributions to a general social security scheme are on a payroll basis, but the contributions of particular groups (such as the self-employed) cannot be assessed on this basis and net income is used as a proxy for gross earnings, the receipts may still be classified as being on a payroll basis. In principle, this heading excludes voluntary contributions paid to social security schemes. When separately identifiable these are shown in the memorandum item on the financing of social security benefits. In practice, however, they cannot always be separately identified from compulsory contributions, in which case they are included in this heading.

37. Contributions to social insurance schemes which are not institutions of general government and to other types of insurance schemes, provident funds, pension funds, friendly societies or other saving schemes are not considered as social security contributions. Provident funds are arrangements under which the contributions of each employee and of the corresponding employer on his/her behalf are kept in a separate account earning interest and withdrawable under specific circumstances. Pension funds are separately organised schemes negotiated between employees and employers and carry provisions for different contributions and benefits, sometimes more directly tied to salary levels and length of service than under social security schemes. When contributions to these schemes are compulsory or quasi-compulsory (e.g., by virtue of agreement with professional and union organisations) they are shown in the memorandum item (refer to Section 4.2 in this Report).

38. Contributions by government employees and by governments in respect of their employees, to social security schemes classified within general government are included in this heading. Contributions to separate schemes for government employees, which can be regarded as replacing general social security schemes, are also regarded as taxes.¹⁴ Where, however, a separate scheme is not seen as replacing a general scheme and has been negotiated between the government, in its role as an employer, and its employees, it is not regarded as social security and contributions to it are not regarded as taxes, even though the scheme may have been established by legislation.

39. This heading excludes “imputed” contributions, which correspond to social benefits paid directly by employers to their employees or former employees or to their representatives (e.g., when employers are legally obliged to pay sickness benefits for a certain period).

40. Contributions are divided into those of employees (2100), employers (2200), and self-employed or non-employed (2300), and then further sub-divided according to the basis on which they are levied. Employees are defined for this purpose as all persons engaged in activities of business units, government bodies, private non-profit institutions, or other paid employment, except the proprietors and their unpaid family members in the case of unincorporated businesses. Members of the armed forces are included, irrespective of the duration and type of their service, if they contribute to social security schemes. The contributions of employers are defined as their payments on account of their employees to social security schemes. Where employees or employers are required to continue the payment of social security contributions when the employee becomes unemployed these contributions, data permitting, are shown in 2100 and 2200 respectively. Accordingly, the

sub-heading 2300 is confined to contributions paid by the self-employed and by those outside of the labour force (e.g., disabled or retired individuals).

3000 – Taxes on payroll and workforce

41. This heading covers taxes paid by employers, employees or the self-employed either as a proportion of payroll or as a fixed amount per person, and which do not confer entitlement to social benefits. Examples of taxes classified here are the United Kingdom national insurance surcharge (introduced in 1977), the Swedish payroll tax (1969-79), and the Austrian Contribution to the Family Burden Equalisation Fund and Community Tax.

4000 – Taxes on property

42. This heading covers recurrent and non-recurrent taxes on the use, ownership or transfer of property. These include taxes on immovable property or net wealth, taxes on the change of ownership of property through inheritance or gift and taxes on financial and capital transactions. The following kinds of tax are excluded from this heading:

- a) taxes on capital gains resulting from the sale of a property (1120 or 1220);
- b) taxes on the use of goods or on permission to use goods or perform activities (5200) (see §72);
- c) taxes on immovable property levied on the basis of a presumed net income which take into account the personal circumstances of the taxpayer; they are classified as income taxes along with taxes on income and capital gains derived from property (1100);
- d) taxes on the use of property for residence, where the tax is payable by either proprietor or tenant and the amount payable is a function of the user's personal circumstances (pay, dependants, and so on); they are classified as taxes on income (1100);
- e) taxes on building in excess of permitted maximum density, taxes on the enlargement, construction or alteration of certain buildings beyond a permitted value and taxes on building construction; they are classified as taxes on permission to perform activities (5200);
- f) taxes on the use of one's own property for special trading purposes like selling alcohol, tobacco, meat or for exploitation of land resources (e.g., United States severance taxes); they are classified as taxes on permission to perform activities (5200).

4100 – Recurrent taxes on immovable property

43. This sub-heading covers taxes levied regularly in respect of the use or ownership of immovable property:

- these taxes are levied on land and buildings;
- they can be in the form of a percentage of an assessed property value based on a national rental income, sales price, or capitalised yield; or in terms of other characteristics of real property, (for example, size or location) from which a presumed rent or capital value can be derived;
- such taxes can be levied on proprietors, tenants, or both; they can also be paid by one level of government to another level of government in respect of property under the jurisdiction of the latter;
- debts are not taken into account in the assessment of these taxes, and they differ from taxes on net wealth in this respect.

44. Taxes on immovable property are further sub-divided into those paid by households (4110) and those paid by other entities (4120), according to the criteria set out in §25 b) above.

4200 – Recurrent taxes on net wealth

45. This sub-heading covers taxes levied regularly (in most cases annually) on net wealth, i.e. taxes on a wide range of movable and immovable property, net of debt. It is sub-divided into taxes paid by individuals (4210) and taxes paid by corporate enterprises (4220) according to the criteria set out in §25 a) above. If separate figures exist for receipts paid by institutions, the tax payments involved are added to those paid by corporations.

4300 – Estate, inheritance and gift taxes

46. This sub-heading is divided into taxes on estates and inheritances (4310) and taxes on gifts (4320).¹⁵ Estate taxes are charged on the amount of the total estate whereas inheritance taxes are charged on the shares of the individual recipients; in addition the latter may take into account the relationship of the individual recipients to the deceased.

4400 – Taxes on financial and capital transactions

47. This sub-heading comprises, *inter alia*, taxes on the issue, transfer, purchase and sale of securities, taxes on cheques, and taxes levied on specific legal transactions such as validation of contracts and the sale of immovable property. The heading does not include:

- a) taxes on the use of goods or property or permission to perform certain activities (5200);
- b) fees paid to cover court charges, charges for birth, marriage or death certificates, which are normally regarded as non-tax revenues (see §9);
- c) taxes on capital gains (1000);
- d) recurrent taxes on immovable property (4100);
- e) recurrent taxes on net wealth (4200);
- f) once-and-for-all levies on property or wealth (4500).

4500 – Other non-recurrent taxes on property¹⁶

48. This sub-heading covers once-and-for-all, as distinct from recurrent, levies on property. It is divided into taxes on net wealth (4510) and other non-recurrent taxes on property (4520). Heading 4510 would include taxes levied to meet emergency expenditures, or for redistribution purposes. Heading 4520 would cover taxes levied to take account of increases in land value due to permission given to develop or provision of additional local facilities by general government, any taxes on the revaluation of capital and once-and-for-all taxes on particular items of property.

4600 – Other recurrent taxes on property

49. These rarely exist in OECD member countries, but the heading would include taxes on goods such as cattle, jewellery, windows, and other external signs of wealth.

5000 – Taxes on goods and services

50. All taxes and duties levied on the production, extraction, sale, transfer, leasing or delivery of goods, and the rendering of services (5100), or in respect of the use of goods or

permission to use goods or to perform activities (5200) are included here. The heading thus covers:

- a) multi-stage cumulative taxes;
- b) general sales taxes – whether levied at manufacture/production, wholesale or retail level;
- c) value-added taxes;
- d) excises;
- e) taxes levied on the import and export of goods;
- f) taxes levied in respect of the use of goods and taxes on permission to use goods, or perform certain activities;
- g) taxes on the extraction, processing or production of minerals and other products.

51. Borderline cases between this heading and heading 4000 (taxes on property) and 6100 (other taxes on business) are referred to in §42, §47 and §74. Residual sub-headings (5300) and (5130) cover tax receipts which cannot be allocated between 5100 and 5200 and between 5110 and 5120, respectively; see §27.

5100 – Taxes on the production, sale, transfer, leasing and delivery of goods and rendering of services

52. This sub-heading consists of all taxes, levied on transactions in goods and services on the basis of their intrinsic characteristics (e.g., value, weight of tobacco, strength of alcohol, and so on) as distinct from taxes imposed on the use of goods, or permission to use goods or perform activities, which fall under 5200.

5110 – General taxes on goods and services

53. This sub-heading includes all taxes, other than import and export duties (5123 and 5124), levied on the production, leasing, transfer, delivery or sales of a wide range of goods and/or the rendering of a wide range of services, irrespective of whether they are domestically produced or imported and irrespective of the stage of production or distribution at which they are levied. It thus covers value-added taxes, sales taxes and multi-stage cumulative taxes. Receipts from border adjustments in respect of such taxes when goods are imported are added to gross receipts for this category, and repayments of such taxes when goods are exported are deducted. These taxes are subdivided into 5111 value-added taxes, 5112 sales taxes, 5113 other general taxes on goods and services.

54. Borderline cases arise between this heading and taxes on specific goods (5120) when taxes are levied on a large number of goods, for example, the United Kingdom purchase tax (repealed in 1973) and the Japanese commodity tax (repealed in 1988). In conformity with national views, the former United Kingdom purchase tax is classified as a general tax (5112) and the former Japanese commodity tax as excises (5121).

5111 – Value-added taxes

55. All general consumption taxes charged on value-added are classified in this sub-heading, irrespective of the method of deduction and the stages at which the taxes are levied. In practice, all OECD countries with value-added taxes normally allow immediate deduction of taxes on purchases by all but the final consumer and impose tax at all stages. In some countries the heading may include certain taxes, such as those on financial and

insurance activities, either because receipts from them cannot be identified separately from those from the value-added tax, or because they are regarded as an integral part of the value-added tax, even though similar taxes in other countries might be classified elsewhere (e.g., 5126 as taxes on services or 4400 as taxes on financial and capital transactions).

5112 – Sales taxes

56. All general taxes levied at one stage only, whether at manufacturing or production, wholesale or retail stage are classified here.

5113 – Other general taxes on goods and services

57. This sub-heading covers multi-stage cumulative taxes (also known as “cascade taxes”) where tax is levied each time a transaction takes place without deduction for tax paid on inputs, and also those general consumption taxes where elements of value-added, sales or cascade taxes are combined.

5120 – Taxes on specific goods and services

58. Excises, profits generated and transferred from fiscal monopolies, and customs and imports duties as well as taxes on exports, foreign exchange transactions, investment goods and betting stakes and special taxes on services, which do not form part of a general tax of 5110, are included in this category.

5121 – Excises

59. Excises are taxes levied on particular products, or on a limited range of products, which are not classifiable under 5110 (general taxes), 5123 (import duties) and 5124 (export duties). They may be imposed at any stage of production or distribution and are usually assessed by reference to the weight or strength or quantity of the product, but sometimes by reference to value. Thus, special taxes on, for example, sugar, beetroot, matches, chocolates, and taxes at varying rates on a certain range of goods, as well as those levied in most countries on tobacco goods, alcoholic drinks and hydrocarbon oils and other energy sources, are included in this sub-heading.

60. Excises are distinguished from:

- a) 5110 (general taxes): this is discussed in §53-54;
- b) 5123 (import duties): if a tax collected principally on imported goods also applies, or would apply, under the law by which the tax is imposed to comparable home-produced goods, the receipts there from would be classified as excises (5121); this principle applies even if there is no comparable home production or no possibility of it (see also §64);
- c) 5126 (taxes on services): the problem here arises in respect of taxes on electricity, gas and energy; all of these are regarded as taxes on goods and are included under 5121.

5122 – Profits of fiscal monopolies

61. This sub-heading covers that part of the profits of fiscal monopolies which is transferred to general government or which is used to finance any expenditures considered to be government expenditures (see §18). Amounts are shown when they are transferred to general government or used to make expenditures considered to be government expenditures.

62. Fiscal monopolies reflect the exercise of the taxing power of government by the use of monopoly powers. Fiscal monopolies are non-financial public enterprises exercising a monopoly in most cases over the production or distribution of tobacco, alcoholic beverages, salt, matches, playing cards and petroleum or agricultural products (i.e. on the kind of products which are likely to be, alternatively or additionally, subject to the excises of 5121), to raise the government revenues which in other countries are gathered through taxes on dealings in such commodities by private business units. The government monopoly may be at the production stage or, as in the case of government-owned and controlled liquor stores, at the distribution stage.

63. Fiscal monopolies are distinguished from public utilities such as rail transport, electricity, post offices, and other communications, which may enjoy a monopoly or quasi-monopoly position but where the primary purpose is normally to provide basic services rather than to raise revenue for government. Transfers from such other public enterprises to the government are considered as non-tax revenues. The traditional concept of fiscal monopoly is not generally extended to include state lotteries, the profits of which are usually accordingly regarded as non-tax revenues. However, they can be included as tax revenues if the prime reason for their operation is to raise revenues to finance government expenditure. Fiscal monopoly profits are distinguished from export and import monopoly profits (5127) transferred from marketing boards or other enterprises dealing with international trade.

5123 – Customs and other import duties

64. Taxes, stamp duties and surcharges restricted by law to imported products are included here. Also included are levies on imported agricultural products which are imposed in member countries of the European Union and amounts paid by certain of these countries under the Monetary Compensation Accounts (MCA) system.¹⁶ Starting from 1998, customs duties collected by European Union member states on behalf of the European Union are no longer reported under this heading in the country tables (in Chapter 4 of the Report). Excluded here are taxes collected on imports as part of a general tax on goods and services, or an excise applicable to both imported and domestically produced goods.

5124 – Taxes on exports

65. In the 1970s, export duties were levied in Australia, Canada and Portugal as a regular measure and they have been used in Finland for counter-cyclical purposes. Some member countries of the European Union pay, as part of the MCA system, a levy on exports (see note 16 to §64). Where these amounts are identifiable, they are shown in this heading. This heading does not include repayments of general consumption taxes or excises or customs duties on exported goods, which should be deducted from the gross receipts under 5110, 5121 or 5123, as appropriate.

5125 – Taxes on investment goods

66. This sub-heading covers taxes on investment goods, such as machinery. These taxes may be imposed for a number of years or temporarily for counter-cyclical purposes. Taxes on industrial inputs which are also levied on consumers (e.g., the Swedish energy tax which is classified under 5121) are not included here.

5126 – Taxes on specific services

67. All taxes assessed on the payment for specific services, such as taxes on insurance premiums, banking services, gambling and betting stakes (e.g., from horse races, football pools, lottery tickets), transport, entertainment, restaurant and advertising charges, fall into this category. Taxes levied on the gross income of companies providing the service (e.g., gross insurance premiums or gambling stakes received by the company) are also classified under this heading. Tax revenues from bank levies and payments to deposit insurance and financial stability schemes are provisionally included here for the 2012 edition. The detailed classification is set out in paragraph 104.

68. Excluded from this sub-heading are:

- a) taxes on services forming part of a general tax on goods and services (5110);
- b) taxes on electricity, gas and energy (5121 as excises);
- c) taxes on individual gains from gambling (1120 as taxes on capital gains of individuals and non-corporate enterprises) and lump-sum taxes on the transfer of private lotteries or on the permission to set up lotteries (5200);¹⁷
- d) taxes on cheques and on the issue, transfer or redemption of securities (4400 as taxes on financial and capital transactions).

5127 – Other taxes on international trade and transactions

69. This sub-heading covers revenue received by the government from the purchase and sale of foreign exchange at different rates. When the government exercises monopoly powers to extract a margin between the purchase and sales price of foreign exchange, other than to cover administrative costs, the revenue derived constitutes a compulsory levy exacted in indeterminate proportions from both purchaser and seller of foreign exchange. It is the common equivalent of an import duty and export duty levied in a single exchange rate system or of a tax on the sale or purchase of foreign exchange. Like the profits of fiscal monopolies and import or export monopolies transferred to government, it represents the exercise of monopoly powers for tax purposes and is included in tax revenues.

70. The sub-heading covers also the profits of export or import monopolies, which do not however exist in OECD countries, taxes on purchase or sale of foreign exchange, and any other taxes levied specifically on international trade or transactions.

5128 – Other taxes on specific goods and services

71. This item includes taxes on the extraction of minerals, fossil fuels and other exhaustible resources from deposits owned privately or by another government together with any other unidentifiable receipts from taxes on specific goods and services. Taxes on the extraction of exhaustible resources are usually a fixed amount per unit of quality or weight, but can be a percentage of value. The taxes are recorded when the resources are extracted. Payments from the extraction of exhaustible resources from deposits owned by the government unit receiving the payment are classified as rent.

5200 – Taxes on use of goods or on permission to use goods or perform activities

72. This sub-heading covers taxes which are levied in respect of the use of goods as distinct from taxes on the goods themselves. Unlike the latter taxes – reported under 5100 – they are not assessed on the value of the goods but usually as fixed amounts. Taxes on permission to use goods or to perform activities are also included here, as are

pollution taxes not based upon the value of particular goods. It is sometimes difficult to distinguish between compulsory user charges and licence fees which are regarded as taxes and those which are excluded as non-tax revenues. The criteria which are employed are noted in §9-10.

73. Although the sub-heading refers to the “use” of goods, registration of ownership rather than use may be what generates liability to tax, so that the taxes of this heading may apply to the ownership of animals or goods rather than their use (e.g., race horses, dogs and motor vehicles) and may apply even to unusable goods (e.g., unusable motor vehicles or guns).

74. Borderline cases arise with:

- a) taxes on the permission to perform business activities which are levied on a combined income, payroll or turnover base and, accordingly, are classified following the rules in §77;
- b) taxes on the ownership or use of property of headings 4100, 4200 and 4600; the heading 4100 is confined to taxes on the ownership or tenancy of immovable property and – unlike the taxes of 5200 – they are related to the value of the property; the net wealth taxes and taxes on chattels of 4200 and 4600 respectively are confined to the ownership rather than the use of assets, apply to groups of assets rather than particular goods and again are related to the value of the assets.

5210 – Recurrent taxes on use of goods and on permission to use goods or perform activities

75. The principal characteristic of taxes classified here is that they are levied at regular intervals and that they are usually fixed amounts. The most important item in terms of revenue receipts is vehicle licence taxes. This sub-heading also covers taxes on permission to hunt, shoot, fish or to sell certain products and taxes on the ownership of dogs and on the performance of certain services, provided that they meet the criteria set out in §9-10. The sub-divisions of 5210 are user taxes on motor vehicles paid by households (5211) and those paid by others (5212).¹⁸ Sub-heading 5213 covers dog licences and user charges for permission to perform activities such as selling meat or liquor when the levies are on a recurring basis. It also covers recurrent general licences for hunting, shooting and fishing where the right to carry out these activities is not granted as part of a normal commercial transaction (e.g., the granting of the licence is not accompanied by the right to use a specific area which is owned by government).

5220 – Non-recurrent taxes on use of goods and on permission to use goods or perform activities

76. This section covers non-recurrent taxes levied on the use of goods or on permission to use goods or perform activities and taxes levied each time goods are used. It includes taxes levied on the emission or discharge into the environment of noxious gases, liquids or other harmful substances.

- Payments for tradable emission permits issued by governments under cap and trade schemes should be recorded here at the time the emissions occur. *Les paiements au titre des permis d'émission négociables délivrés par les administrations publiques dans le cadre des dispositifs de plafonnement et d'échange doivent également être comptabilisés sous cette rubrique au moment où les émissions sont produites.* No revenue should be recorded for permits that governments issue free of charge.

- The accrual basis of recording means that there can be a timing difference between the cash being received by government for the permits and the time the emission occurs. In the national accounts, this timing gives rise to a financial liability for government during the period.
 - Payments made for the collection and disposal of waste or noxious substances by public authorities should be excluded as they constitute a sale of services to enterprises.
77. Other taxes falling under heading 5200 that are not levied recurrently are also included here. Thus, once-and-for-all payments for permission to sell liquor or tobacco or to set up betting shops are included provided they meet the criteria set out in §9-10.

6000 – Other taxes

78. Taxes levied on a base, or bases, other than those described under headings 1000, 3000, 4000 and 5000, or on bases of which none could be regarded as being predominantly the same as that of any one of these headings, are covered here. As regards taxes levied on a multiple base, if it is possible to estimate receipts related to each base (e.g., the Austrian and German “*Gewerbesteuer*”) this is done and the separate amounts included under the appropriate headings. If the separate amounts cannot be estimated, but it is known that most of the receipts are derived from one base, the whole of the receipts are classified according to that base. If neither of these procedures can be followed, they are classified here. The sub-headings may also include receipts from taxes which governments are unable to identify or isolate (see §27). Included here also are fines and penalties paid for infringement of regulations relating to taxes but not identifiable as relating to a particular category of taxes (see §14). A subdivision is made between taxes levied wholly or predominantly on business (6100) and those levied on others (6200).

A.6. Conciliation with National Accounts

79. This section of the tables provides a re-conciliation between the OECD calculation of total tax revenues and the total of all taxes and social contributions paid to general government as recorded in the country’s National Accounts. Where the country is a member of the European Union (EU), the comparison is between the OECD calculation of total tax revenues and the sum of tax revenues and social contributions recorded in the combination of the general government and the institutions of the EU sectors of the National Accounts.

A.7. Memorandum item on the financing of social security benefits

80. In view of the varying relationship between taxation and social security contributions and the cases referred to in §34 to §40, a memorandum item collects together all payments earmarked for social security-type benefits, other than voluntary payments to the private sector. Data are presented as follows (refer Section 4.2 in this Report):

- a) taxes of 2000 series;
- b) taxes earmarked for social security benefits;
- c) voluntary contributions to the government;
- d) compulsory contributions to the private sector.

Guidance on the breakdown of a) to d) above is provided in §34 to §40.

A.8. Memorandum item on identifiable taxes paid by government

81. Identifiable taxes actually paid by government are presented in a memorandum item classified by the main headings of the OECD classification of taxes. In the vast majority of countries, only social security contributions and payroll taxes paid by government can be identified. These are, however, usually the most important taxes paid by governments (refer to Section 4.3 in the Report).

A.9. Relation of OECD classification of taxes to national accounting systems

82. A system of national accounts (SNA) seeks to provide a coherent framework for recording and presenting the main flows relating respectively to production, consumption, accumulation and external transactions of a given economic area, usually a country or a major region within a country. Government revenues are an important part of the transactions recorded in SNA. The final version of the 2008 SNA was jointly published by five international organisations: the United Nations, the International Monetary Fund, the European Union, the Organisation for Economic Co-Operation and Development, and the World Bank in August 2009. The System is a comprehensive, consistent and flexible set of macroeconomic accounts. It is designed for use in countries with market economies, whatever their stage of economic development, and also in countries in transition to market economies. The important parts of the SNA's conceptual framework and its definitions of the various sectors of the economy have been reflected in the OECD's classification of taxes.

83. There are, however, some differences between the OECD classification of taxes and SNA concepts that are listed below. They arise because the aim of the former is to provide the maximum disaggregation of statistical data on what are generally regarded as taxes by tax administrations.

- a) OECD includes compulsory social security contributions paid to general government in total tax revenues; imputed and voluntary contributions plus those paid to private funds are not treated as taxes (§7 and §8 above);
- b) there are different points of view on whether or not some levies and fees are classified as taxes (§9 and §10 above);
- c) OECD excludes imputed taxes or subsidies resulting from the operation of official multiple exchange rates or from the central bank paying a rate of interest on required reserves that is different from other market rates;
- d) there are differences in the treatment of non-wastable tax credits.

84. As noted in §1 and §2, headings 1000 to 6000 of the OECD list of taxes cover all unrequited payments to general government, other than compulsory loans and fines. Such unrequited payments including fines, but excluding compulsory loans can be obtained from adding together the following figures in the 2008 SNA:

- value-added type taxes (D.211);
- taxes and duties on imports, excluding VAT (D.212);
- export taxes (D.213);
- taxes on products, excluding VAT, import and export taxes (D.214);
- other taxes on production (D.29);
- taxes on income (D.51);

- other current taxes (D.59);
- social contributions (D.61), excluding voluntary contributions;
- capital taxes (D.91).

A.10. The OECD classification of taxes and the International Monetary Fund (GFS) system

85. The coverage and valuation of tax revenues in the GFS system and the 2008 SNA are very similar. Therefore, the differences between the OECD classification and that of the 2008 SNA (see §83 above) also apply to the GFS. In addition, the International Monetary Fund subdivides the OECD 5000 heading into Section IV (Domestic Taxes on Goods and Services) and Section V (Taxes on International Trade and Transactions). This reflects the fact that while the latter usually yield insignificant amounts of revenue in OECD countries, this is not the case in many non-OECD countries.

A.11. Comparison of the OECD classification of taxes with other international classifications

86. The table below describes an item-by-item comparison of the OECD classification of taxes and the classifications, used in the following:

- i) System of National Accounts (2008 SNA);
- ii) European System of Accounts (2010 ESA);
- iii) *IMF Government Finance Statistics Manual (GFSM 2014)*.

87. These comparisons represent those that would be expected to apply in the majority of cases. However in practice some flexibility should be used in their application. This is because in particular cases, countries can adopt varying approaches to the classification of revenues in National Accounts.

	OECD Classification		2008 SNA	2010 ESA	GFSM 2014
1000	Taxes on income, profits and capital gains				
	1100	Individuals			
	1 110	Income and profits	D51-8.61a	D51A	1111
	1 120	Capital gains	D51-8.61c, d	D51C, D	1111
	1200	Corporations			
	1 210	Income and profits	D51-8.61b	D51B	1112
	1 220	Capital gains	D51-8.61c	D51C	1112
	1300	Unallocable as between 1100 and 1200			
2000	Social security contributions				
	2100	Employees	D613-8.85	D613	1211
	2200	Employers	D611-8.83	D611	1212
	2300	Self-employed, non-employed	D613-8.85	D613	1213
	2400	Unallocable as between 2100, 2200 and 2300			
3000	Taxes on payroll and workforce				
			D29-7.97a	D29C	112
4000	Taxes on property				
	4100	Recurrent taxes on immovable property			
	4110	Households	D59-8.63a	D59A	1131
	4120	Other	D29-7.97b	D29A	1131
	4200	Recurrent net wealth taxes			
	4210	Individual	D59-8.63b	D59A	1132
	4220	Corporations	D59-8.63b	D59A	1132
	4300	Estate, inheritance and gift taxes			
	4310	Estate and inheritance taxes	D91-10.207b	D91A	1133
	4320	Gift taxes	D91-10.207b	D91A	1133
	4400	Taxes on financial and capital transactions	D59-7.96d; D29-7.97e	D214B, C	114114; 1161
	4500	Other non-recurrent taxes on property	D91-10.207a	D91B	1135
	4600	Other recurrent taxes on property	D59-8.63c	D59A	1136
5000	Taxes on goods and services				
	5100	Taxes on production, sale and transfer of goods and services			
	5110	General taxes on goods and services			
	5111	Value-added taxes	D211-7.89	D211; D29G	11411
	5112	Sales taxes	D2122-7.94a; D214-7.96a	D21224; D214I	11412
	5113	Other general taxes on goods and services	D214-7.96a	D214I	11413
	5120	Taxes on specific goods and services			
	5121	Excises	D2122-7.94b; D214-7.96b	D21223; D214A, B, D	1142
	5122	Profits of fiscal monopolies	D214-7.96e	D214J	1143
	5123	Customs and other import duties	D2121-7.93	D2121; D21221, 2	1151
	5124	On exports	D213-7.95a	D214K	1152-4
	5125	On investment goods			
	5126	On specific services	D2122-7.94c; D214-7.96c	D21225; D214E, F, G; D29F	1144; 1156
	5127	Other taxes on international trade and transactions	D2122-7.94d D29-7.95b D29-7.97g D59-8.64d	D21226; D29D; D59E	1153; 1155-6
	5128	Other taxes on specific goods and services			1146
	5130	Unallocable between 5110 and 5120			
	5200	Taxes on use of goods and on permission to use goods or perform activities			
	5210	Recurrent taxes on use of goods and on permission to use goods or perform activities			
	5211	Motor vehicle taxes households	D59-8.64c	D59D	11451
	5212	Motor vehicles taxes others	D29-7.97d	D214D; D29B	11451
	5213	Other recurrent taxes on use of goods and on permission to use goods or perform activities	D29-7.97c, d, f D59-8.64c	D29B, E, F; D59D	11452
	5220	Non-recurrent taxes on permission to use goods or perform activities			
					11452
	5300	Unallocable as between 5100 and 5200			
6000	Other taxes				
	6100	Payable solely by business			
					1161
	6200	Payable by other than business, or unidentifiable			
			D59-8.64a, b	D59B, C	1162

A.12. Attribution of tax revenues by sub-sectors of general government

88. The OECD classification requires a breakdown of tax revenues by sub-sectors of government. The definition of each sub-sector and the criteria to be used to attribute tax revenues between these sub-sectors are set out below. They follow the guidance of the 2008 SNA and GFSM 2014.

Sub-sectors of general government to be identified

a) Central government

89. The central government sub-sector includes all governmental departments, offices, establishments and other bodies which are agencies or instruments of the central authority whose competence extends over the whole territory, with the exception of the administration of social security funds. Central government therefore has the authority to impose taxes on all resident and non-resident units engaged in economic activities within the country.

b) State, provincial or regional government

90. This sub-sector consists of intermediate units of government exercising a competence at a level below that of central government. It includes all such units operating independently of central government in a part of a country's territory encompassing a number of smaller localities, with the exception of the administration of social security funds. In unitary countries, regional governments may be considered to have a separate existence where they have substantial autonomy to raise a significant proportion of their revenues from sources within their control and their officers are independent of external administrative control in the actual operation of the unit's activities.

91. At present, federal countries comprise the majority of cases where revenues attributed to intermediate units of government are identified separately. Spain is the only unitary country in this position. In the remaining unitary countries, regional revenues are included with those of local governments.

c) Local government

92. This sub-sector includes all other units of government exercising an independent competence in part of the territory of a country, with the exception of the administration of social security funds. It encompasses various urban and/or rural jurisdictions (e.g., local authorities, municipalities, cities, boroughs, districts).

d) Social security funds

93. Social security funds form a separate sub-sector of general government. The social security sub-sector is defined in the 2008 SNA by the following extracts from paragraphs 4.124 to 4.126 and 4.147:

“Social security schemes are social insurance schemes covering the community as a whole or large section of the community that are imposed and controlled by government units. The schemes cover a wide variety of programmes, providing benefits in cash or in kind for old age, invalidity or death, survivors, sickness and maternity, work injury, unemployment, family allowance, health care, etc. There is not necessarily a direct link between the amount of the contribution paid by an individual and the benefits he or she may receive.” (Paragraph 4.124)

“When social security schemes are separately organised from the other activities of government units and hold their assets and liabilities separately from the latter and engage in financial transactions on their own account they qualify as institutional units that are described as social security funds.” (Paragraph 4.125)

“The amounts raised, and paid out, in social security contributions and benefits may be deliberately varied in order to achieve objectives of government policy that have no direct connection with the concept of social security as a scheme to provide social benefits to members of the community. They may be raised or lowered in order to influence the level of aggregate demand in the economy, for example. Nevertheless, so long as they remain separately constituted funds, they must be treated as separate institutional units in the SNA.” (Paragraph 4.126)

“The social security funds sub-sector (of general government) consists of the social security funds operating at all levels of government. Such funds are social insurance schemes covering the community as a whole or large section of the community that are imposed by government units.” (Paragraph 4.147)

94. This definition of social security funds is followed in the OECD classification with the two following exceptions which are excluded:

- schemes imposed by government and operated by bodies outside the general government sector, as defined in §3 of this manual; and
- schemes to which all contributions are voluntary.

Supra-national Authorities

95. This sub-sector covers the revenue-raising operations of supra-national authorities within a country. In practice, the only relevant supra-national authority in the OECD area is that of the institutions of the European Union (EU). As from 1998, supra-national authorities are no longer included in the *Revenue Statistics*, to achieve consistency with the SNA definition of general government which excludes them. For example, income taxes and social security contributions collected by European Institutions and paid by European civil servants who are resident of EU member countries should not be included. However the specific levies paid by the member states of the EU continue to be included in total tax revenues and they are shown under this heading.

Criteria to be used for the attribution of tax revenues

96. When a government collects taxes and pays them over in whole or in part to other governments, it is necessary to determine whether the revenues should be considered to be those of the collecting government which it distributes to others as grants, or those of the beneficiary governments which the collecting government receives and passes on only as their agent. The criteria to be used in the attribution of revenues are set out in §97 to §100, which replicate Paragraphs 3.70 to 3.73 from the 2008 SNA.

97. In general, a tax is attributed to the government unit that:

- a) exercises the authority to impose the tax (either as a principal or through the delegated authority of the principal);
- b) has final discretion to set and vary the rate of the tax.

98. Where an amount is collected by one government for and on behalf of another government, and the latter government has the authority to impose the tax, and set and

vary its rate, then the former is acting as an agent for the latter and the tax is reassigned. Any amount retained by the collecting government as a collection charge should be treated as a payment for a service. Any other amount retained by the collecting government, such as under a tax-sharing arrangement, should be treated as a current grant. If the collecting government was delegated the authority to set and vary the rate, then the amount collected should be treated as tax revenue of this government.

99. Where different governments jointly and equally set the rate of a tax and jointly and equally decide on the distribution of the proceeds, with no individual government having ultimate overriding authority, then the tax revenues are attributed to each government according to its respective share of the proceeds. If an arrangement allows one government unit to exercise ultimate overriding authority, then all of the tax revenue is attributed to that unit.

100. There may also be the circumstance where a tax is imposed under the constitutional or other authority of one government, but other governments individually set the tax rate in their jurisdictions. The proceeds of the tax generated in each respective government's jurisdiction are attributed as tax revenues of that government.

Levies paid by member states of the European Union

101. The levies paid by the member states of the EU take the form specific levies which include:

- a) custom duties and levies on agricultural goods (5123);
- b) gross monetary compensation accounts (5123 if relating to imports and 5124 if relating to exports); and
- c) steel, coal, sugar and milk levies (5128).

102. The custom duties collected by member states on behalf of the EU are recorded:

- on a gross of collection fee basis;
- using figures adjusted so that duties are shown on a “final destination” as opposed to a “country of first entry” basis where such adjustments can be made. These adjustments concern in particular duties collected at important (sea) ports. Although the EU duties are collected by the authorities of the country of first entry, when possible these duties should be excluded from the revenue of the collecting country and be included in the revenue of the country of final destination.

103. This is the specific EU levy that most clearly conforms to the attribution criterion described in §95 above. Consequently as from 1998, these amounts are footnoted as a “memorandum item” to the EU member state country tables (in Chapter 4) and no longer shown under heading 5123. However, the figures are included in the total tax revenue figures on the top line for all the relevant years shown in the tables.

A.13. Provisional classification of revenues from bank levies and payments to deposit insurance and financial stability schemes

104. The OECD have adopted the following interim approach to reporting revenue from bank levies plus deposit insurance and stability fees for the 2012 and subsequent editions of *OECD Revenue Statistics*. It is recommended that the amounts should be recorded under category 5126.

- Compulsory payments of stability fees, bank levies and deposit insurance should generally be treated as tax revenues where the payments are made to General Government and

allocated to the governments' consolidated or general funds so that the Government is free to make immediate use of the money for the purposes that it chooses. This principle would apply regardless of whether the Government is promising to make payments to guarantee the banks' customer deposits in some future contingency.

- If the compulsory payments are made to general government and placed in funds that are earmarked to be entirely channelled back to the sector of the economy that comprises the companies that are subject to the payment, they would still generally be treated as tax revenues on the grounds that the funds would be available for the government and would reduce its budget deficit, the fee is unrequited for an individual entity and the amounts raised could be unrelated to any eventual pay out to depositors or expenditure on wider support for the financial sector.
- Payments to made to the smaller long-standing schemes for insuring "retail" deposits, where the payment levels are consistent with the costs of insurance, should be classified as fee for service.
- Any payments which involve governments realising the assets of a failed institution or receiving a priority claim on its assets in liquidation in order to fund payments of compensation to customers for their lost deposits would be treated as a fee for a service as opposed to tax revenues.
- Compulsory payments that are made to funds operated outside the government sector and non-state institutions backed by the deposit takers and all payments to voluntary schemes should not be treated as tax revenues.

Notes

1. All references to SNA are to the 2008 edition.
2. See Section A.12 of this *Guide* for a discussion of the concept of agency capacity.
3. It is usually possible to identify amounts of social security contributions and payroll taxes, but not other taxes paid by government.
4. If, however, a levy which is considered as non-tax revenue by most countries is regarded as a tax – or raises substantial revenue – in one or more countries, the amounts collected are footnoted at the end of the relevant country tables, even though the amounts are not included in total tax revenues.
5. Names, however, can frequently be misleading. For example, though a passport fee would normally be considered a non-tax revenue, if a supplementary levy on passports (as is the case in Portugal) were imposed in order to raise substantial amounts of revenue relative to the cost of providing the passport, the levy would be regarded as a tax under 5200.
6. A more detailed explanation of this distinction can be found in the special feature, "Current issues in reporting tax revenues", in the 2001 edition of the *Revenue Statistics*.
7. Sometimes the terms "non-refundable" and "refundable" are used, but it may be considered illogical to talk of "refundable" when nothing has been paid.
8. A different treatment, however, is accorded to non-wastable tax credits under imputation systems of corporate income tax (§31-33).
9. This is not strictly a true tax expenditure in the formal sense. Such tax expenditures require identification of a benchmark tax system for each country or, preferably, a common international benchmark. In practice it has not been possible to reach agreement on a common international benchmark.
10. Unless based on the profit made on a sale, in which case they would be classified as capital gains taxes under 1120 or 1220.

11. In some countries, the same legislation applies to both individual and corporate enterprises for particular taxes on income. However, the receipts from such taxes are usually allocable between individuals and enterprises and can therefore be shown in the appropriate sub-heading.
12. For example, "... sufficiently self-contained and independent that they behave in the same way as corporations [...] (including) keeping a complete set of accounts" (2008 SNA, Section 4.44).
13. In Canada – a country also referred to as having an imputation system – the (wastable) tax credit for the shareholder is in respect of domestic corporation tax deemed to have been paid whether or not a corporation tax liability has arisen. As there is no integral connection between the corporation tax liability and the credit given against income tax under such systems, these credits for dividends are treated, along with other tax credits, on the lines described in §20.
14. This may also apply where a scheme for government employees existed prior to the introduction of a general social security scheme.
15. In the 2008 SNA, these are regarded as capital transfers and not as taxes (see Section A.8).
16. This is the system by which the European Union adjusts for differences between the exchange rates used to determine prices under the Common Market Agricultural Policy and actual exchange rates. Payments under the system may relate to imports or exports and where these amounts are separately identifiable they are shown under the appropriate heading (5123 or 5124). In this Report, these amounts are shown gross (i.e. without deducting any subsidies paid out under the MCA system).
17. Transfers of profits of State lotteries are regarded as non-tax revenues (see also §63).
18. See §25 c) as regards this distinction.

A.1. Classification des impôts de l'OCDE

1. 1000 Impôts sur le revenu, les bénéfices et les gains en capital
 - 1100 Impôts sur le revenu, les bénéfices et les gains en capital des personnes physiques
 - 1110 Sur le revenu et les bénéfices
 - 1120 Sur les gains en capital
 - 1200 Impôts sur le revenu, les bénéfices et les gains en capital des sociétés
 - 1210 Sur le revenu et les bénéfices
 - 1220 Sur les gains en capital
 - 1300 Non ventilables entre les rubriques 110 et 1200
2. 2000 Cotisations de sécurité sociale
 - 2100 A la charge des salariés
 - 2110 Sur la base du salaire
 - 2120 Sur la base de l'impôt sur le revenu
 - 2200 A la charge des employeurs
 - 2210 Sur la base du salaire
 - 2220 Sur la base de l'impôt sur le revenu
 - 2300 A la charge des travailleurs indépendants ou des personnes n'occupant pas d'emploi
 - 2310 Sur la base du salaire
 - 2320 Sur la base de l'impôt sur le revenu
 - 2400 Non ventilables entre les rubriques 2100, 2200 et 2300
 - 2410 Sur la base du salaire
 - 2420 Sur la base de l'impôt sur le revenu
3. 3000 Impôts sur les salaires et la main-d'œuvre
4. 4000 Impôts sur le patrimoine
 - 4100 Impôts périodiques sur la propriété immobilière
 - 4110 Ménages
 - 4120 Autres agents
 - 4200 Impôts périodiques sur l'actif net
 - 4210 Personnes physiques
 - 4220 Sociétés
 - 4300 Impôts sur les mutations par décès, les successions et les donations
 - 4310 Impôts sur les mutations par décès et les successions
 - 4320 Impôts sur les donations
 - 4400 Impôts sur les transactions mobilières et immobilières
 - 4500 Autres impôts non périodiques sur le patrimoine
 - 4510 Impôts sur l'actif net
 - 4520 Autres impôts non périodiques

- 4600 Autres impôts périodiques sur le patrimoine
- 5. 5000 Impôts sur les biens et services
 - 5100 Impôts sur la production, la vente, le transfert, la location et la livraison des biens et la prestation de services
 - 5110 Impôts généraux
 - 5111 Taxes sur la valeur ajoutée
 - 5112 Impôts sur les ventes
 - 5113 Autres impôts généraux sur les biens et services
 - 5120 Impôts sur des biens et des services déterminés
 - 5121 Accises
 - 5122 Bénéfices des monopoles fiscaux
 - 5123 Droits de douane et droits à l'importation
 - 5124 Taxes à l'exportation
 - 5125 Impôts sur les biens d'équipement
 - 5126 Impôts sur des services déterminés
 - 5127 Autres impôts sur les transactions et les échanges internationaux
 - 5128 Autres impôts sur des biens et services déterminés
 - 5130 Non ventilables entre les rubriques 5110 et 5120
 - 5200 Impôts sur l'utilisation des biens ou l'autorisation d'utiliser des biens ou d'exercer des activités
 - 5210 Impôts périodiques
 - 5211 À la charge des ménages au titre de véhicules à moteur
 - 5212 À la charge d'autres agents au titre de véhicules à moteur
 - 5213 Autres impôts périodiques
 - 5220 Impôts non périodiques
 - 5300 Non ventilables entre les rubriques 5100 et 5200
- 6. 6000 Autres impôts
 - 6100 À la charge exclusive des entreprises
 - 6200 À la charge d'autre agents que les entreprises ou non identifiables

A.2. Champ couvert

Principes généraux

1. Dans la classification de l'OCDE, le terme « impôts » désigne uniquement les versements obligatoires effectués sans contrepartie au profit des administrations publiques. Les impôts n'ont pas de contrepartie en ce sens que, normalement, les prestations fournies par les administrations au contribuable ne sont pas proportionnelles à ses versements.
2. Le terme « impôts » ne couvre pas les amendes, les pénalités, ni les prêts obligatoires aux administrations. Les cas dans lesquels la délimitation entre recettes fiscales et non

fiscales est délicate à tracer, pour certains droits et taxes d'utilisation, sont examinés dans les §9 à §12.

3. Les administrations publiques comprennent l'administration centrale et les organismes dont les opérations sont sous son contrôle effectif, les administrations régionales et locales et leurs services, les organismes de sécurité sociale et les entités publiques autonomes, à l'exception des entreprises publiques. Cette définition des administrations est calquée sur celle du *Système de comptabilité nationale 2008 (SCN)*¹, où les administrations publiques et leurs sous-secteurs sont décrits dans le Chapitre 4, Section F, pages 80-84.

4. Les paiements obligatoires à des organismes supranationaux et aux organismes qui en dépendent ne sont plus compris depuis 1998 parmi les impôts sauf quelques exceptions. En effet, les droits de douane collectés par les États membres de l'Union européenne pour le compte de celle-ci sont toujours présentés à titre de rubrique « Pour mémoire » et compris dans le total des recettes fiscales, au chapitre 4, tableaux par pays (voir §94.). Dans les pays où les églises font partie des administrations publiques, les impôts sur les cultes sont inclus dans ces paiements, à condition qu'ils répondent aux critères énoncés au §1 ci-dessus. Comme les données se réfèrent aux montants encaissés par les administrations publiques, les contributions versées à des organismes privés, aux organismes sociaux ou régimes de sécurité sociale extérieurs aux administrations publiques, aux syndicats ou aux associations professionnelles sont exclues, même si elles sont obligatoires. Sont toutefois inclus les versements obligatoires aux administrations publiques dont le montant est affecté à ces organismes, à condition que l'administration ne fasse pas simplement office d'agent collecteur². On a distingué les bénéfices des monopoles fiscaux de ceux d'autres entreprises publiques et on les a considérés comme des impôts parce qu'ils reflètent l'exercice du pouvoir d'imposition de l'État par l'intermédiaire du monopole (voir §61 à §63), comme le sont les bénéfices de l'État provenant de l'achat et de la vente de monnaies étrangères à des taux différents (voir §69).

5. Les impôts payés par les administrations elles-mêmes (tels que les cotisations de sécurité sociale et les impôts sur les salaires payés par les administrations en tant qu'employeurs (2200 et 3000), les impôts sur la consommation qu'elles acquittent à l'occasion de leurs achats ou les impôts sur leur patrimoine) sont inclus dans les données présentées. Toutefois, lorsqu'il est possible de les isoler, les montants provenant de ces impôts³ sont indiqués dans la section 4.3 de cette publication.

6. Les rapports entre cette classification et celle du *Système de comptabilité nationale (SCN)* sont indiqués dans les sections A.9 et A.11. À cause des différences qui existent entre les deux classifications, les statistiques de la comptabilité nationale ne sont pas toujours établies ou classées suivant la pratique adoptée dans le présent guide. Ces différences et d'autres encore sont mentionnées dans les cas appropriés (voir par exemple §25), mais il est impossible de toutes les signaler. Il peut y avoir aussi certaines différences entre cette classification et celle utilisée par certaines administrations nationales (voir par exemple §10), aussi les statistiques nationales et celles de l'OCDE ne peuvent pas toujours être compatibles ; ces différences, cependant, sont vraisemblablement très insignifiantes dans les montants des recettes en cause.

Cotisations de sécurité sociale

7. Les cotisations de sécurité sociale, définies au §34, qui sont versées aux administrations publiques, font partie des recettes fiscales. Elles sont évidemment assimilables à des impôts puisqu'il s'agit de versements obligatoires à des administrations publiques. Mais elles peuvent différer toutefois des autres impôts du fait que le paiement des prestations de sécurité sociale dépend dans la plupart des pays du versement des cotisations appropriées, encore qu'il n'y ait pas forcément un lien entre l'importance des prestations et le montant des cotisations. La comparabilité entre les pays sera meilleure si on considère les cotisations de sécurité sociale comme des impôts ; elles figurent cependant sous une rubrique distincte de façon à permettre un traitement séparé pour n'importe quelle analyse.

8. Les cotisations de sécurité sociale qui sont volontaires ou qui ne sont pas versées à des administrations publiques (voir §1) ne sont pas considérées comme des impôts, bien que dans certains pays (comme il est indiqué dans les notes correspondantes) il soit difficile d'éliminer les cotisations volontaires et certains versements obligatoires au secteur privé. Les cotisations de sécurité sociale imputées ne sont pas considérées comme des impôts.

Droits, taxes d'utilisation et droits de licence

9. Si l'on excepte les droits perçus sur les permis de circulation des véhicules à moteur, qui sont universellement considérés comme des impôts, il n'est pas facile de distinguer les droits et taxes d'utilisation qui doivent être traitées comme des impôts de celles qui ne doivent pas l'être. Si, en effet, un droit ou une taxe est perçu au titre d'un service ou d'une activité déterminée, le lien entre ce prélèvement et la prestation fournie peut être plus ou moins important, de même que la relation entre le montant du prélèvement et le coût de la prestation. Lorsque le bénéficiaire d'une prestation acquitte un droit dont le montant est clairement lié au coût de la prestation fournie, on peut considérer que le prélèvement comporte une contrepartie, et d'après la définition donnée au §1, il ne sera pas traité comme un impôt. Toutefois, dans les cas suivants, les prélèvements seraient « sans contrepartie » :

- a) lorsque le prélèvement est très supérieur au coût de la prestation fournie ;
- b) lorsque le redevable de la contribution n'est pas le bénéficiaire de la prestation correspondante (par exemple, un droit perçu sur l'abattage du bétail pour financer un service qui est fourni aux agriculteurs) ;
- c) lorsque l'État ne fournit pas un service déterminé en contrepartie du droit qu'il perçoit, même si un permis est délivré à celui qui acquitte le droit (par exemple, lorsque l'État délivre des permis de chasse, de pêche ou de port d'armes qui ne sont pas assortis du droit d'utiliser une parcelle déterminée de terres appartenant à l'État) ;
- d) lorsque les bénéficiaires de la prestation sont les personnes qui ont acquitté le droit, mais que la prestation dont chacun bénéficie n'est pas nécessairement en rapport avec le montant de ses propres versements (par exemple, le droit de commercialisation du lait acquitté par les fermiers qui sert à promouvoir la consommation de lait.

10. Dans des cas limites, cependant, l'application des critères énoncés au §1 peut être particulièrement difficile. La solution adoptée, dans un souci d'uniformité entre les pays et eu égard aux montants relativement faibles des recettes en cause, consiste à s'en tenir à la pratique prépondérante des administrations fiscales plutôt que de laisser chaque pays décider si ces prélèvements sont des impôts ou des recettes non fiscales⁴.

11. On trouvera ci-après la liste des principaux droits et taxes en question et leur traitement normal⁵ dans la présente publication :

Recettes non fiscales : frais de justice ; droits de délivrance de permis de conduire ; droits portuaires ; redevances de passeport ; redevances de radio et de télévision lorsque le service est assuré par les pouvoirs publics.

Impôts du sous-groupe 5200 : autorisation d'exercer certaines activités telles que : distribution de films ; chasse, pêche et utilisation d'armes à feu ; organisation de spectacles ou de jeux et paris ; vente de boissons alcoolisées ou de tabacs ; autorisation de posséder des chiens et d'utiliser ou posséder des véhicules à moteur ou des armes à feu ; droit de lotissement.

12. Dans la pratique, il se peut qu'il ne soit pas toujours possible d'isoler les recettes fiscales des recettes non fiscales quand elles sont enregistrées ensemble. Si l'on estime qu'il s'agit surtout de recettes non fiscales, l'ensemble sera traité comme tel ; dans le cas contraire, les recettes seront comptabilisées et classées conformément aux règles énoncées au §27.

Redevances

13. Les redevances versées pour obtenir le droit d'extraire du pétrole et du gaz ou de mettre en valeur d'autres ressources minérales sont considérées normalement comme des recettes non fiscales, car il s'agit de revenus immobiliers procurés par des terres ou des ressources appartenant à l'État.

Amendes et pénalités

14. En principe, les amendes et pénalités portant sur les impôts impayés ou les pénalités appliquées en cas de tentative d'évasion fiscale ne doivent pas être enregistrées comme des recettes fiscales. Cependant, il se peut qu'il ne soit pas possible de séparer le versement des amendes et pénalités des recettes correspondant aux impôts auxquels ces amendes et pénalités se rattachent. Dans ce cas, les amendes et pénalités associés à un impôt particulier sont enregistrées avec les recettes correspondant à cet impôt alors que les amendes et pénalités liées à des recettes correspondant à des impôts non-identifiés sont classées comme autres impôts dans la catégorie 6000. Les amendes qui ne concernent pas des infractions fiscales (comme les infractions au stationnement), ou qui ne sont pas identifiables en tant que telles, ne sont pas non plus considérées comme des recettes fiscales.

A.3. Bases de comptabilisation

Droits constatés

15. Les données enregistrées dans cette publication pour les années récentes sont essentiellement indiquées en droits constatés, c'est-à-dire qu'elles sont enregistrées au moment du fait générateur de l'impôt. D'autres informations sont fournies dans les notes des tableaux par pays au chapitre 4 de ce Rapport.

16. Toutefois, les données des années antérieures sont encore principalement comptabilisées sur la base des décaissements, c'est-à-dire au moment où l'administration reçoit le versement. Ainsi, les impôts retenus à la source par les employeurs au cours d'un exercice, mais versés à l'administration au cours de l'exercice suivant, et les impôts dus au

titre d'une année mais effectivement versés l'année suivante, figurent les uns et les autres dans les recettes du second exercice. Les restitutions, remboursements et retraits résultant d'opérations rectificatives sont déduits des recettes brutes de la période au cours de laquelle ces opérations sont effectuées.

17. Les données relatives aux recettes fiscales sont comptabilisées, sans déduction compensatoire des dépenses administratives liées au recouvrement de l'impôt. De même, lorsque le produit d'un impôt sert à subventionner certains membres de la collectivité, la subvention n'est pas déduite du rendement de l'impôt, encore que certains pays fassent figurer dans leurs données l'impôt après déduction des subventions.

18. Pour les monopoles fiscaux (sous-groupe 5122), seul le montant effectivement transféré à l'État est inclus dans les recettes publiques. Toutefois, les dépenses des monopoles fiscaux qui sont considérées comme des dépenses publiques (par exemple, des dépenses de caractère social engagées par les monopoles fiscaux à l'instigation de l'État) sont ajoutées après coup pour calculer le montant des recettes fiscales (voir §61).

La distinction entre dispositions fiscales et dépenses directes⁶

19. Étant donné que la présente publication ne vise que les recettes publiques en faisant abstraction des dépenses, il convient de distinguer entre les dispositions fiscales et les dépenses directes. Normalement, cette distinction ne soulève aucune difficulté, car les dépenses directes sont effectuées en dehors du système fiscal et des comptes fiscaux et en vertu de dispositions législatives distinctes. Dans les cas limites, on recourt, pour établir la distinction, au principe de la comptabilisation sur la base des paiements. Dans la mesure où une disposition affecte le montant des paiements du contribuable à l'État, elle est considérée comme une disposition fiscale dont il est tenu compte dans les données figurant dans cette publication. Une disposition qui n'affecte pas ce montant est considérée comme une dépense directe dont il n'est pas tenu compte dans les données reproduites dans cette publication.

20. Il est clair que les abattements fiscaux, exonérations et déductions de l'assiette de l'impôt modifient le montant de l'impôt acquitté à l'État ; il s'agit donc de dispositions fiscales. Inversement, les formes d'aides qui ne sont pas imputables sur l'impôt et n'ont donc aucun lien avec le processus d'imposition, ne réduisent pas les recettes publiques qui sont consignées dans ce volume. Les crédits d'impôt sont des montants déductibles de l'impôt à acquitter (par opposition aux déductions, qui sont opérées sur l'assiette de l'impôt). On distingue deux catégories de crédits d'impôt : ceux (que l'on qualifiera ici de « non récupérables ») qui sont limités au montant de l'impôt à acquitter et ne peuvent donc donner lieu à un versement de l'administration au contribuable, et ceux (qualifiés ici de « récupérables ») qui n'ont pas cette limite, de sorte que l'excédent du crédit sur l'impôt peut être versé au contribuable⁷. Le crédit d'impôt non récupérable, comme un abattement fiscal, affecte évidemment le montant de l'impôt acquitté à l'État ; aussi est-il considéré comme une disposition fiscale. La solution adoptée pour les crédits d'impôts récupérables⁸ consiste à distinguer l'élément de « dépense fiscale »⁹, qui est la part du crédit utilisée pour réduire ou supprimer l'impôt dû par le contribuable, et « l'élément de transfert », qui correspond à la part excédant l'impôt dû par le contribuable et qui lui est reversée. Les recettes fiscales rapportées doivent être diminuées du montant de l'élément de dépense, mais non de l'élément de transfert. En outre, les montants de l'élément de dépense fiscale et de l'élément de transfert doivent être indiqués pour mémoire dans les tableaux par pays. Les pays qui ne sont pas en mesure de faire la distinction entre l'élément de dépense

fiscale et l'élément de transfert doivent indiquer si leurs recettes fiscales ont été ou non diminuées du montant total de ces éléments, et fournir toutes les estimations dont ils disposent concernant les montants de ces deux éléments. Des informations complémentaires figurent dans le chapitre 2 de ce Rapport, qui fait apparaître les effets des différents traitements possibles des crédits d'impôts récupérables sur les ratios impôt rapportant les impôts au PIB.

Année civile et année fiscale (exercice budgétaire)

21. Les autorités nationales dont l'exercice budgétaire ne correspond pas à l'année civile fournissent, autant que possible, leurs données sur la base de l'année civile afin de faciliter au maximum la comparaison avec les données des autres pays. Les données d'un petit nombre de pays se réfèrent à l'exercice budgétaire. Pour ceux-ci, les statistiques de PIB utilisées dans les tableaux comparatifs portent aussi sur les exercices budgétaires.

A.4. Principes généraux de classification

Les fondements essentiels de la classification

22. Les recettes sont classées par groupes principaux (1000, 2000, 3000, 4000, 5000, 6000) suivant l'assiette de l'impôt : 1000 revenus, bénéfices et gains en capital ; 2000 et 3000 salaires et nombre d'employés ; 4000 patrimoine ; 5000 biens et services ; 6000 assiettes diverses, autres ou non identifiables. Lorsqu'un impôt est calculé en fonction de plusieurs assiettes, les recettes sont, chaque fois que c'est possible, réparties entre les divers groupes (voir §27 et §77). Les groupes 4000 et 5000 ne comprennent pas seulement les impôts ayant pour assiette le patrimoine, les biens ou les services eux-mêmes, mais aussi certains impôts connexes. Ainsi, les impôts sur les mutations du patrimoine sont classés dans le groupe 4400¹⁰ et les impôts sur l'utilisation des biens, ou l'autorisation d'exercer une activité, dans le groupe 5200. Dans les groupes 4000 et 5000, une distinction est faite dans certains sous-groupes entre impôts périodiques et impôts non périodiques : on entend par impôts périodiques ceux qui sont perçus à intervalles réguliers (ordinairement tous les ans) et par impôts non périodiques ceux qui ne sont perçus qu'une seule fois (voir aussi les §42 à §45, §48, §49 et §75 pour une application particulière de cette distinction).

23. L'affectation spéciale de certaines recettes fiscales n'influe pas sur leur classification. Toutefois comme explicité au §34 sur la classification des cotisations de sécurité sociale, l'octroi d'un droit aux prestations sociales est crucial dans la définition de la rubrique principale 2000.

24. La manière selon laquelle un impôt est perçu ou recouvré (par exemple, au moyen de timbres) n'affecte pas sa classification.

Classification des contribuables

25. Dans certains sous-groupes, des distinctions sont faites entre les différentes catégories de contribuables. Ces distinctions varient d'un impôt à l'autre :

a) Ventilation des impôts sur le revenu et sur l'actif net entre personnes physiques et sociétés

La distinction fondamentale entre les impôts sur le revenu des sociétés et les impôts sur le revenu des personnes physiques est que les premiers sont perçus sur la société en tant qu'entité et non sur les personnes physiques qui en sont propriétaires, donc sans tenir compte de la situation personnelle de celles-ci. La même distinction est applicable aux impôts sur l'actif net des sociétés et des personnes physiques. Les impôts perçus sur les bénéfices des sociétés de personnes et sur le revenu de certaines institutions comme les caisses d'assurance-vie ou de retraite, sont classés selon le même principe. Ils sont compris dans les impôts sur les sociétés (1200) lorsqu'ils sont perçus sur la société de personnes ou l'institution en tant qu'entité sans que la situation personnelle des propriétaires entre en ligne de compte ; dans les autres cas, ils sont considérés comme des impôts sur les personnes physiques (1100). Ordinairement, les impôts sur les sociétés et les impôts sur les personnes physiques sont régis par des dispositions législatives différentes¹¹. La distinction qui est faite ici entre personnes physiques et sociétés ne reprend pas la classification par secteur (ménages, entreprises, etc.) adoptée dans les comptes de revenus et de dépenses du SCN. Cette dernière classification exclut du secteur des ménages certaines entreprises non constituées en sociétés¹² et les fait figurer parmi les entreprises non financières et les institutions financières. Toutefois, l'impôt sur les bénéfices de ces entreprises ne peut pas toujours être isolé de l'impôt sur les autres revenus des propriétaires de ces entreprises, ou ne peut l'être que d'une façon arbitraire. On n'a pas cherché ici à faire la distinction et l'impôt sur le revenu des personnes physiques figure globalement, quelle que soit la nature du revenu imposable.

b) Ventilation des impôts sur les biens immobiliers entre ménages et autres agents

En l'occurrence, la distinction est celle qui a été adoptée par le SCN dans les comptes de production et de consommation. On distingue, en effet, les ménages en tant que consommateurs d'une part (c'est-à-dire à l'exclusion des entreprises individuelles), et les producteurs d'autre part. Cependant, les impôts sur les logements occupés par les ménages, qu'ils soient à la charge des propriétaires qui les occupent, du locataire ou du propriétaire, sont classés comme étant à la charge des ménages. C'est la distinction faite habituellement entre les impôts sur les biens des personnes et les impôts sur les biens des entreprises. Toutefois, certains pays ne sont pas en mesure d'établir cette distinction.

c) Ventilation des permis de circuler des véhicules à moteur entre taxes à la charge des ménages et à la charge d'autres agents

On distingue ici les ménages en tant que consommateurs d'une part, et producteurs d'autre part, comme dans les comptes de production et de consommation du SCN.

d) Ventilation des autres impôts (6000) entre les entreprises et les autres agents

Il est fait la même distinction qu'au point c) ci-dessus entre les producteurs, d'une part, et les ménages consommateurs d'autre part. Les impôts qui figurent dans le groupe 6000 parce qu'ils ne comportent pas une assiette unique ou parce que leur assiette ne relève d'aucune des catégories précédentes, mais qui ne sont manifestement perçus que sur les producteurs et non sur les ménages, sont classés comme étant « à la charge des entreprises ». Les autres impôts du groupe 6000 figurent sous la rubrique « à la charge d'autres agents » ou « non identifiés ».

Surtaxes

26. Les recettes des surtaxes relatives à des impôts particuliers sont classées ordinairement avec les recettes de l'impôt correspondant, que la surtaxe ait ou non un caractère temporaire. Toutefois, si l'une des caractéristiques de la surtaxe permet de la classer sous une rubrique différente de la classification de l'OCDE, les recettes de cette surtaxe sont classées sous cette rubrique et non pas avec les recettes de l'impôt correspondant.

Recettes fiscales non identifiables et sous-groupes résiduels

27. Il arrive parfois qu'on ne puisse déterminer si des impôts relèvent entièrement d'un groupe ou d'un sous-groupe de la classification de l'OCDE ; dans ces cas on applique les méthodes suivantes :

- a) le groupe est connu, mais on ne sait pas comment répartir les recettes entre les sous-groupes ; les recettes sont alors classées dans le sous-groupe résiduel approprié (1300, 2400, 4520, 4600, 5130, 5300 ou 6200) ;
- b) on sait que l'ensemble des recettes d'un groupe d'impôts (ordinairement des impôts locaux) provient d'impôts relevant d'un groupe ou sous-groupe particulier, mais certains impôts du groupe, dont le montant ne peut être déterminé avec précision, peuvent être classés dans d'autres groupes ou sous-groupes ; dans ce cas les recettes sont comptabilisées dans le groupe ou sous-groupe dont relève l'essentiel des recettes ;
- c) il est impossible d'identifier le groupe ou le sous-groupe d'un impôt (ordinairement un impôt local) ; l'impôt est alors classé dans le groupe 6200, à moins qu'il ne s'agisse d'un impôt manifestement à la charge des entreprises, auquel cas il est classé dans le sous-groupe 6100.

A.5. Commentaires sur les postes de la liste**1000 – Impôts sur le revenu, les bénéfices et les gains en capital**

28. Ce groupe couvre les impôts prélevés sur le revenu ou le bénéfice net (c'est-à-dire le revenu brut déduction faite des abattements autorisés) des personnes physiques et des entreprises. Sont aussi couverts les impôts prélevés sur les gains en capital des personnes physiques et des entreprises et sur les gains provenant de jeux.

29. Ce groupe comprend :

- a) les impôts perçus principalement sur les revenus ou les bénéfices, bien qu'ils puissent l'être partiellement sur d'autres bases ; les impôts qui ont une autre assiette principale que le revenu ou les bénéfices sont classés selon les principes énoncés aux §27 et §77 ;
- b) les impôts sur la propriété immobilière, qui sont perçus sur la base d'un revenu présumé ou estimé faisant partie de l'assiette de l'impôt sur le revenu [voir aussi §42a), c) et d)] ;
- c) les versements obligatoires aux caisses de sécurité sociale qui sont prélevés sur les revenus mais ne donnent pas droit à des prestations sociales ; lorsque ces contributions donnent droit à des prestations sociales, elles figurent à la rubrique 2000 (voir §34) ;
- d) les recettes provenant d'impôts cédulaires sur le revenu intégrés dans le régime général qui sont globalement classés dans ce groupe, bien que certains de ces impôts soient sur le revenu brut et ne tiennent pas toujours compte de la situation personnelle du contribuable.

30. Les impôts figurant dans ce groupe sont subdivisés en deux grands sous-groupes, les impôts sur le revenu des personnes physiques (1100) et les impôts sur le revenu des sociétés (1200), une ventilation étant faite dans chacun d'eux entre les impôts sur le revenu et les bénéfices (1110 et 1210) et les impôts sur les gains en capital (1120 et 1220). Si certaines recettes ne peuvent être identifiées comme relevant soit du sous-groupe 1100, soit du sous-groupe 1200, ou si cette distinction ne peut être faite dans la pratique (parce qu'il n'y a pas de données fiables sur les bénéficiaires des paiements sur lesquels la retenue à la source est faite), elles sont classées dans le sous-groupe 1300 (non ventilables).

Traitement des crédits d'impôt dans les systèmes d'imputation

31. Dans les régimes d'imputation de l'impôt sur les bénéfices des sociétés, les actionnaires bénéficient d'une compensation totale ou partielle d'imposition sur les dividendes que la société leur a versés et pour lesquels elle a acquitté l'impôt sur le revenu des sociétés. Dans les pays¹³ qui appliquent un tel régime, une fraction de l'impôt sur les bénéfices des sociétés sert à alléger l'impôt dû par l'actionnaire. Cet allègement prend la forme d'un crédit d'impôt, dont le montant peut être inférieur, égal ou supérieur au montant total de l'impôt dont il est redevable. Si le crédit d'impôt dépasse ce montant, l'excédent peut être versé à l'actionnaire. Comme ce type de crédit d'impôt fait partie intégrante des systèmes d'imputation de l'impôt sur le revenu des sociétés, tout paiement à l'actionnaire est considéré comme un remboursement d'impôt et non comme une dépense (se référer au traitement des autres crédits d'impôt exposé au §20).

32. Puisque, dans les systèmes d'imputation, le crédit d'impôt (même lorsqu'il dépasse l'impôt dû) est censé être une disposition fiscale, on peut se demander s'il doit être déduit des recettes de l'impôt sur le revenu des personnes physiques (1110) ou de celles de l'impôt sur les bénéfices de sociétés (1210). Dans ce Rapport, le montant intégral de l'impôt acquitté sur les bénéfices des sociétés figure sous le poste 1210 et aucun impôt imputé n'est inclus dans le poste 1110. Le montant total du crédit d'impôt réduit donc le montant des recettes du poste 1110, que ce crédit se traduise par une réduction de l'impôt dû sur le revenu des personnes physiques ou par un remboursement réel du fait que le crédit dépasse le montant de l'impôt (cependant, lorsque ces crédits sont déduits de l'impôt sur les sociétés au titre de dividendes versés à des sociétés, le montant est déduit des recettes du poste 1210).

1120 et 1220 – Impôts sur les gains en capital

33. Ces postes comprennent les impôts perçus sur les gains en capital, le sous-groupe 1120 comptabilisant les impôts prélevés sur les gains des personnes physiques et le sous-groupe 1220 ceux qui sont perçus sur les gains des entreprises constituées sous forme de sociétés, lorsque ces recettes peuvent être ventilées. Ce n'est pas le cas dans de nombreux pays et les recettes de ces impôts sont alors classées avec celles de l'impôt sur le revenu. Les impôts sur les gains provenant de jeux sont aussi classés sous le poste 1120.

2000 – Cotisations de sécurité sociale

34. Figurent dans ce groupe tous les versements obligatoires qui donnent le droit de bénéficier d'une prestation sociale future (éventuelle). Ces versements sont généralement affectés au financement de prestations sociales et souvent effectués au profit d'institutions ou d'administrations publiques qui fournissent de telles prestations. Cependant, cette affectation n'entre pas dans la définition des cotisations de sécurité sociale et n'est pas nécessaire pour qu'un impôt soit classé dans cette rubrique.

Cependant, il faut qu'un impôt confère un droit pour être classé dans cette rubrique. Par conséquent, les prélèvements sur les revenus ou la masse salariale qui sont affectés aux caisses de sécurité sociale mais ne donnent aucun droit à des prestations sont exclus de cette rubrique et figurent à celle des impôts sur le revenu des personnes physiques (1100) ou des impôts sur les salaires et la main-d'œuvre (3000). Les impôts assis sur d'autres bases, telles que les biens et services, qui sont affectés à des prestations de sécurité sociale, ne sont pas indiqués ici, mais sont classés en fonction de leurs bases respectives parce qu'en général ils ne donnent pas droit à des prestations de sécurité sociale.

35. Seraient entre autres incluses les cotisations au titre des catégories suivantes de prestations de sécurité sociale : les allocations d'assurance-chômage et les compléments, les allocations pour accidents, blessures et maladie, les pensions de retraite, d'invalidité et de survivant, les allocations familiales, les remboursements de dépenses médicales et d'hospitalisation ou la fourniture de services médicaux ou hospitaliers. Les cotisations peuvent être collectées à la fois auprès des employés et des employeurs.

36. Les cotisations peuvent être assises sur les gains ou la masse salariale (« sur la base du salaire ») ou sur le revenu net après déductions et exemptions en fonction de la situation personnelle (« sur la base de l'impôt sur le revenu ») et les recettes correspondant à ces deux bases doivent être identifiées séparément si possible. Cependant, lorsque les cotisations à un régime général de sécurité sociale sont assises sur la masse salariale, mais que les cotisations de groupes particuliers (tels que les travailleurs indépendants) ne peuvent être évaluées sur cette base et que le revenu net est utilisé comme valeur rapprochée des gains bruts, les recettes peuvent encore être considérées comme assises sur la masse salariale. En principe, cette rubrique exclut les contributions volontaires à des régimes de sécurité sociale. Lorsqu'elles peuvent être identifiées séparément, elles figurent pour mémoire dans le tableau indiquant le financement des prestations de sécurité sociale. Toutefois, en pratique, elles ne peuvent pas toujours être distinguées des cotisations volontaires, et dans ce cas elles figurent à cette rubrique.

37. Les cotisations à des régimes d'assurance sociale qui ne relèvent pas des pouvoirs publics et à d'autres régimes d'assurance ou de prévoyance, aux caisses de retraite, sociétés de secours mutuel ou autres systèmes d'épargne, ne sont pas considérées comme des cotisations de sécurité sociale. Les caisses de prévoyance résultant d'arrangements aux termes desquels les cotisations de chaque salarié et celles que l'employeur verse en son nom sont comptabilisées séparément dans un compte productif d'intérêts d'où elles peuvent être retirées dans des conditions bien déterminées. Les caisses de retraite sont des régimes autonomes organisés par négociations entre salariés et employeurs, qui comportent diverses contributions et prestations, parfois liées plus directement au salaire et à la durée d'activité que dans les régimes de sécurité sociale. Lorsque les cotisations à ces régimes sont obligatoires ou quasi obligatoires (par exemple en vertu d'un accord entre organisations professionnelles et syndicales), elles sont comptabilisées dans le poste pour mémoire (voir la section 4.2 de ce Rapport).

38. Les cotisations versées par les agents des administrations et par les administrations au titre de leurs agents à des régimes de sécurité sociale relevant des pouvoirs publics sont incluses dans ce groupe. Sont aussi assimilées à des impôts les cotisations à des régimes particuliers réservés aux agents des administrations qui sont censés remplacer un régime général de la sécurité sociale¹⁴. Par contre, lorsqu'un régime distinct n'est pas censé remplacer un régime général et résulte de négociations entre l'administration, agissant en

qualité d'employeur, et ses agents, il n'est pas considéré comme un régime de sécurité sociale et les cotisations à ce titre ne sont pas assimilées à des impôts, même si le régime a été institué par des dispositions législatives.

39. Cette rubrique ne comprend pas les cotisations « imputées », qui correspondent aux prestations sociales versées directement par les employeurs à leurs salariés, ou anciens salariés, ou à leurs représentants (par exemple, lorsque des employeurs sont légalement tenus de verser des prestations maladies pendant une certaine période).

40. Le groupe comprend les cotisations à la charge des salariés (2100), à la charge des employeurs (2200), et à la charge des travailleurs indépendants ou des personnes n'occupant pas d'emploi (2300). À cet effet, on entend par salariés toutes les personnes qui exercent une activité dans des entreprises, des administrations, des institutions privées sans but lucratif, ou qui occupent d'autres emplois rémunérés, à l'exception des propriétaires et des membres de leur famille non rémunérés dans le cas d'entreprises individuelles. Sont également compris les membres des forces armées, quelle que soit la durée et la nature de leurs services, s'ils cotisent à un régime de sécurité sociale. Par cotisations à la charge des employeurs, on entend les versements qu'ils effectuent au régime de sécurité sociale pour le compte de leurs salariés. Si, en cas de chômage, les salariés ou employeurs sont tenus de continuer à effectuer ces versements, ces derniers doivent figurer respectivement dans les sous-groupes 2100 et 2200. En conséquence, le sous-groupe 2300 est réservé aux cotisations versées par les travailleurs indépendants et par ceux qui n'appartiennent pas à la population active (comme les handicapés ou les retraités).

3000 – Impôts sur les salaires et la main-d'œuvre

41. Ce groupe couvre les impôts acquittés par les employeurs, les salariés et les travailleurs indépendants, en pourcentage du salaire ou d'après un montant forfaitaire par personne, qui ne sont pas affectés aux dépenses de sécurité sociale. Parmi les impôts classés ici, on peut citer l'impôt complémentaire d'assurance nationale sans affectation (institué en 1977) au Royaume-Uni, l'impôt sur la masse salariale en Suède (1969-79), la fraction du « *Gewerbesteuer* » autrichien et allemand qui reposait sur la masse salariale (1965-78).

4000 – Impôts sur le patrimoine

42. Ce groupe couvre les impôts périodiques et non périodiques sur l'utilisation, la propriété ou la mutation des biens. Sont comptabilisés ici les impôts sur la propriété immobilière et sur l'actif net, les impôts sur les mutations par décès, les successions et les donations, et les impôts sur les transactions mobilières et immobilières. Sont exclus de ce groupe :

- a) les impôts sur les gains en capital provenant de la vente d'un bien (1120 ou 1220) ;
- b) les impôts sur l'utilisation des biens ou l'autorisation d'utiliser des biens ou d'exercer des activités (5200) [voir §72] ;
- c) les impôts immobiliers perçus sur la base d'un revenu net présumé qui tiennent compte de la situation personnelle du contribuable ; ces impôts sont classés dans le groupe 1100 en tant qu'impôts sur le revenu, avec les impôts sur le revenu et les gains en capital provenant des biens immobiliers ;
- d) les impôts sur l'utilisation de biens immobiliers aux fins d'habitation qui sont à la charge du propriétaire ou du locataire et dont le montant est fonction de la situation personnelle de l'utilisateur (salaire, personnes à charge, etc.) ; ils sont classés dans le groupe 1100 en tant qu'impôts sur le revenu ;

- e) les impôts sur les constructions dépassant la densité autorisée, les impôts sur l'extension, la construction ou la modification de certains immeubles au-delà d'une valeur autorisée et les impôts sur la construction d'immeubles ; ces impôts sont classés dans le poste 5200 en tant qu'impôts sur l'autorisation d'exercer certaines activités ;
- f) les impôts sur l'utilisation de biens immobiliers par le propriétaire à des fins commerciales particulières, comme la vente de boissons alcoolisées, de tabac, de viande, ou pour l'exploitation de sols ou terrains (par exemple aux États-Unis, les taxes de lotissement) ; ils sont classés dans le poste 5200 en tant qu'impôts sur l'autorisation d'exercer certaines activités.

4100 – Impôts périodiques sur la propriété immobilière

43. Ce sous-groupe comprend les impôts prélevés régulièrement au titre de l'utilisation ou de la propriété de biens immobiliers :

- ces impôts sont prélevés sur les terrains et les bâtiments ;
- ces impôts sont calculés en pourcentage de la valeur du bien évalué d'après un revenu locatif fictif, le prix de vente ou le rendement capitalisé, ou en fonction d'autres caractéristiques du bien, comme sa dimension ou son emplacement, d'où l'on peut déduire une valeur locative présumée ou la valeur du capital ;
- ces impôts sont à la charge du propriétaire, du locataire ou des deux ; ils peuvent également être payés par une administration à une autre administration au titre d'un bien relevant de la compétence de cette dernière ;
- il n'est pas tenu compte des dettes pour la détermination de l'assiette de ces impôts, contrairement aux impôts sur l'actif net.

44. Les impôts sur la propriété immobilière sont en outre subdivisés en impôts acquittés par les ménages (4110) et impôts acquittés par d'autres agents (4120), suivant les critères exposés au §25 b) ci-dessus.

4200 – Impôts périodiques sur l'actif net

45. Ce sous-groupe comprend les impôts prélevés régulièrement (dans la plupart des cas annuellement) sur l'actif net, c'est-à-dire les impôts perçus sur un large éventail de biens mobiliers et immobiliers, endettement déduit. Il est subdivisé en impôts acquittés par des personnes physiques (4210), et en impôts acquittés par des sociétés (4220) selon les critères exposés plus haut au §25 a). Si les recettes provenant des institutions sont comptabilisées à part, elles doivent être ajoutées aux impôts des entreprises.

4300 – Impôts sur les mutations par décès, les successions et les donations

46. Ce sous-groupe comprend les impôts sur les mutations par décès et les successions (4310) et les impôts sur les donations (4320)¹⁵. Les impôts sur les mutations par décès sont calculés soit sur l'ensemble de la masse successorale, soit en fonction de la part de chacun des bénéficiaires (« part héréditaire ») ; en outre, ces derniers impôts peuvent tenir compte du degré de parenté entre chacun des bénéficiaires et le défunt.

4400 – Impôts sur les transactions mobilières et immobilières

47. Sont compris, entre autres, dans ce sous-groupe les impôts sur l'émission, le transfert, l'achat et la vente de valeurs mobilières, les impôts sur les chèques, ainsi que les

droits perçus à l'occasion d'actes juridiques déterminés, comme la validation de contrats et la vente de biens immobiliers. Sont exclus :

- a) les impôts sur l'utilisation de biens, mobiliers ou immobiliers, ou l'autorisation d'exercer certaines activités (5200) ;
- b) les droits acquittés au titre de frais de justice, ou pour la délivrance de certificats de naissance, de mariage ou de décès, car ces droits sont considérés comme des recettes non fiscales (voir §9) ;
- c) les impôts sur les gains en capital (1000) ;
- d) les impôts périodiques sur la propriété immobilière (4100) ;
- e) les impôts périodiques sur l'actif net (4200) ;
- f) les prélèvements sur le patrimoine ou sur l'actif net effectués une fois pour toutes (4500).

4500 – Autres impôts non périodiques sur le patrimoine¹⁶

48. Ce sous-groupe comprend les prélèvements sur le patrimoine effectués une fois pour toutes (par opposition aux prélèvements périodiques). Il est subdivisé en impôts sur l'actif net (4510) et en autres impôts non périodiques sur le patrimoine (4520). Le poste 4510 inclurait les impôts perçus pour couvrir des dépenses exceptionnelles ou à des fins de redistribution. Le poste 4520 comprendrait les impôts prélevés pour tenir compte d'une plus-value prise par les terrains du fait que les administrations publiques ont autorisé l'extension ou l'aménagement d'installations locales, ainsi que les impôts sur la réévaluation du capital ou les impôts perçus une seule fois sur certains biens déterminés.

4600 – Autres impôts périodiques sur le patrimoine

49. Ils sont rares dans des pays membres de l'OCDE ; ce sous-groupe comprendrait les impôts sur des biens tels que le cheptel, les bijoux, les fenêtres et les signes extérieurs de richesse.

5000 – Impôts sur les biens et services

50. Ce poste couvre tous les impôts et droits perçus sur la production, l'extraction, la vente, le transfert, la location ou la livraison de biens et la prestation de services (5100), ou sur l'utilisation ou l'autorisation d'utiliser des biens ou d'exercer des activités (5200). Ce groupe comprend donc :

- a) les taxes cumulatives en cascade ;
- b) les taxes générales sur les ventes – perçues au stade de la production ou de la fabrication, du gros ou du détail ;
- c) les taxes sur la valeur ajoutée ;
- d) les accises ;
- e) les taxes perçues à l'importation et à l'exportation de biens ;
- f) les impôts perçus sur l'utilisation de biens et sur l'autorisation d'utiliser des biens ou d'exercer certaines activités ;
- g) les impôts sur l'extraction, le traitement ou la production de minéraux et autres produits.

51. Les cas douteux de délimitation entre ce groupe et le groupe 4000 (impôts sur le patrimoine) et le sous-groupe 6100 (autres impôts à la charge des entreprises) sont examinés au §42, §47 et §74. Des postes résiduels (5300 et 5130) ont été prévus pour

comptabiliser les recettes fiscales qui ne peuvent être ventilées respectivement entre les postes 5100 et 5200 et entre les postes 5110 et 5120 (voir §27).

5100 – Impôts sur la production, la vente, le transfert, la location et la livraison de biens et la prestation de services

52. Ce sous-groupe comprend tous les impôts perçus sur les transactions afférentes à des biens ou services, en fonction de leurs caractéristiques propres (comme la valeur, le poids du tabac, le degré d'alcool, etc.), à la différence des impôts perçus au titre de l'utilisation ou de l'autorisation d'utiliser des biens ou d'exercer des activités, qui entrent dans le sous-groupe 5200.

5110 – Impôts généraux sur les biens et services

53. Ce sous-groupe comprend tous les impôts, autres que les droits à l'importation et à l'exportation (5123 et 5124), perçus sur la production, la location, le transfert, la livraison ou la vente d'une gamme de biens ou la prestation d'une gamme de services, qu'ils soient produits dans le pays ou importés, et quel que soit le stade de la production ou de la distribution aux quel ils sont perçus. Il couvre ainsi les taxes sur la valeur ajoutée, les taxes sur les ventes et les taxes de caractère cumulatif en cascade. On a ajouté aux recettes brutes de cette catégorie les recettes provenant de la compensation à la frontière de ces impôts lorsque les biens sont importés, et déduit les remboursements d'impôts effectués lorsque les marchandises sont exportées. Ces impôts sont ventilés en : taxes sur la valeur ajoutée (5111), impôts sur les ventes (5112), autres impôts généraux sur les biens et services (5113).

54. Certains cas se trouvent à la limite entre ce sous-groupe et celui des impôts sur des biens et services déterminés (5120) lorsque ces impôts sont perçus sur un grand nombre de biens, comme dans le cas de la « purchase tax » au Royaume-Uni (abrogée en 1973) et l'impôt japonais sur les biens marchands (abrogé en 1988). Conformément aux options nationales, la « purchase tax » britannique est classée impôt général (5112) et l'impôt japonais dans les accises (5121).

5111 – Taxes sur la valeur ajoutée

55. Sont classés dans ce sous-groupe tous les impôts généraux sur la consommation prélevés sur la valeur ajoutée, quels que soient le mode de déduction et les stades auxquels ils sont perçus. En pratique, tous les pays de l'OCDE où existe une taxe sur la valeur ajoutée autorisent normalement la déduction immédiate des taxes sur les achats par tous les redevables, à l'exception du consommateur final, et imposent la taxe à tous les stades. Dans certains pays, le poste peut inclure aussi certains impôts, comme les taxes sur les activités financières et les assurances, soit parce que les recettes correspondantes ne peuvent être dissociées de celles de la taxe sur la valeur ajoutée, soit parce qu'elles sont considérées comme faisant partie intégrante de la taxe sur la valeur ajoutée, même si les taxes similaires qui existent dans d'autres pays peuvent être classées autrement (par exemple, sous le poste 5126 comme impôts sur les services ou sous le poste 4400 comme impôts sur les transactions mobilières et immobilières).

5112 – Impôts sur les ventes

56. Sont classés ici tous les impôts perçus à un stade unique, que ce soit celui de la fabrication, de la production, du gros ou du détail.

5113 – Autres impôts généraux sur les biens et services

57. Ce sous-groupe comprend les impôts cumulatifs, connus également sous le nom d'impôt en cascade, qui sont perçus sans déduction de l'impôt sur les moyens de production chaque fois qu'une opération a lieu, ainsi que les impôts généraux sur la consommation lorsqu'il s'y ajoute des éléments qui les font assimiler à la taxe sur la valeur ajoutée, à la taxe sur les ventes ou à des taxes en cascade.

5120 – Impôts sur des biens et des services déterminés

58. Ce sous-groupe couvre les accises, les bénéfices engendrés et transférés par les monopoles fiscaux, et les droits de douane et à l'importation, ainsi que les taxes à l'exportation, les opérations de change, les biens d'équipement et les paris, et aussi les impôts spéciaux sur les services qui ne font pas partie d'un impôt général du sous-groupe 5110.

5121 – Accises

59. Les accises sont perçues sur des produits particuliers, ou sur une gamme limitée de produits, qui ne peuvent être classés sous le poste 5110 (impôts généraux), 5123 (droits à l'importation) ou 5124 (droits à l'exportation). Elles peuvent être perçues à un stade quelconque de la production ou de la distribution et sont calculées ordinairement par référence au poids, au degré ou au volume du produit, mais parfois aussi à sa valeur. Cette subdivision couvre ainsi les impôts spéciaux, qui frappent notamment le sucre, la betterave, les allumettes, les chocolats, et les impôts auxquels sont soumis à des taux divers certains produits, comme ceux perçus dans la plupart des pays sur les tabacs, boissons alcoolisées, hydrocarbures et autres sources d'énergie.

60. Les accises sont à distinguer de :

- a) 5110 (impôts généraux) ; ce cas est examiné aux §53 et §54 ;
- b) 5123 (droits à l'importation) ; lorsqu'un impôt perçu principalement sur des biens importés s'applique, ou s'appliquerait, aussi légalement à un bien comparable produit dans le pays, les recettes procurées par cet impôt seront classées avec les accises (5121) ; ce principe s'applique même lorsqu'il n'y a pas de production locale, réelle ou potentielle, comparable (voir aussi §64) ;
- c) 5126 (impôts sur les services) ; le problème ici concerne les impôts sur l'électricité, le gaz et l'énergie ; ils sont tous considérés comme des impôts sur les biens et inclus dans le poste 5121.

5122 – Bénéfices des monopoles fiscaux

61. Ce sous-groupe couvre la fraction des bénéfices des monopoles fiscaux qui est transférée aux administrations publiques ou qui sert à financer des dépenses considérées comme dépenses publiques (voir §18). Les montants sont comptabilisés lorsqu'ils sont transférés aux administrations publiques ou utilisés pour effectuer des dépenses considérées comme des dépenses publiques.

62. Les monopoles fiscaux reflètent l'exercice du pouvoir d'imposition de l'État par l'intermédiaire du monopole. Les monopoles fiscaux sont des entreprises publiques non financières, qui exercent dans la plupart des cas un monopole sur la production ou la distribution du tabac, des boissons alcoolisées, du sel, des allumettes, des cartes à jouer et des produits pétroliers ou agricoles (c'est-à-dire, sur le genre de produits qui peuvent être

soumis, principalement ou accessoirement, aux accises du poste 5121), pour procurer des recettes publiques qui, dans d'autres pays, sont obtenues par le biais d'impôts frappant les transactions sur ces produits d'entreprises privées. Le monopole d'État peut être exercé au stade de la production, ou au stade de la distribution comme dans le cas des magasins de vente de boissons alcoolisées qui appartiennent à l'État et sont contrôlés par lui.

63. Les monopoles fiscaux sont différents des services publics, comme les chemins de fer, l'électricité, les postes et autres moyens de communication, qui peuvent avoir une position de monopole ou de quasi-monopole, mais dont l'objet principal est, normalement, de fournir des services essentiels et non pas de procurer des recettes à l'État. Les transferts à l'administration de ces autres entreprises publiques sont considérés comme des recettes non fiscales. La notion traditionnelle de monopole fiscal n'a généralement pas été élargie pour inclure les loteries nationales, dont les bénéfices sont habituellement considérés comme des recettes non fiscales. Cependant, ces bénéfices peuvent être considérés comme des recettes fiscales quand la raison principale de la mise en œuvre de ces loteries est l'augmentation des recettes pour financer les dépenses publiques. On distingue les bénéfices des monopoles fiscaux des bénéfices des monopoles d'exportation et d'importation (5127), qui sont transférés des offices de commercialisation ou d'autres entreprises s'occupant du commerce international.

5123 – Droits de douane et autres droits à l'importation

64. Figurent ici les taxes, droits de timbre et surtaxes qui, selon la loi sont perçus exclusivement sur des produits importés. Sont aussi inclus dans ce poste les droits perçus sur l'importation de denrées agricoles dans les pays Membres de l'Union Européenne et les montants acquittés par certains de ces pays en vertu du Système de Montants Compensatoires¹⁶. À partir de 1998, les droits de douane collectés par les États membres de l'Union européenne pour le compte de l'Union européenne ne sont plus reportés sous cette rubrique dans les tableaux par pays (chapitre 4 de ce Rapport). Sont exclues ici les taxes perçues sur les importations au titre d'un impôt général sur les biens et les services ou d'une accise applicable aussi bien aux produits importés qu'aux produits fabriqués dans le pays.

5124 – Taxes à l'exportation

65. Pendant les années 70, les droits à l'exportation étaient perçus normalement en Australie, au Canada et au Portugal, et ils étaient utilisés en Finlande à des fins conjoncturelles. Certains pays Membres de l'Union Européenne acquittent, dans le cadre du système des montants compensatoires, une taxe sur les exportations (voir la note 16 du §64). Lorsque ces montants sont identifiables, ils sont inclus dans ce poste. Ce dernier ne comprend pas les remboursements effectués au titre d'impôts généraux sur la consommation d'accises ou de droits de douane sur des biens exportés, qui doivent être déduits des recettes brutes comptabilisées, selon le cas, sous le poste 5110, 5121 ou 5123.

5125 – Impôts sur les biens d'équipement

66. Ce sous-groupe comprend les impôts perçus sur les biens d'équipement, comme les machines. Ils peuvent exister depuis un certain nombre d'années ou avoir un caractère temporaire et être prélevés à des fins conjoncturelles. Ne sont pas inclus les impôts sur les « inputs » industriels qui frappent aussi les consommateurs (comme l'impôt suédois sur l'énergie qui est classé sous le poste 5121).

5126 – Impôts sur des services déterminés

67. Sous ce poste figurent tous les impôts calculés sur la rémunération de services spécifiques, comme les taxes sur les primes d'assurance, les taxes sur les services bancaires, sur les jeux et paris (par exemple : courses de chevaux, pronostics de football, billets de loterie nationale), les transports, les spectacles, les restaurants et la publicité. Les impôts prélevés sur le revenu brut des sociétés prestataires d'un service (exemple : primes d'assurance brutes, mises de jeux encaissées par les sociétés) sont classés sous ce poste. Les recettes fiscales provenant des prélèvements sur les banques et des contributions aux mécanismes de garantie des dépôts et de stabilité financière sont provisoirement classés ici pour l'édition 2012. La classification détaillée est présentée dans le paragraphe 104.

68. Ne figurent pas sous ce poste :

- a) les impôts sur les services qui font partie d'un impôt général sur les biens et services et sont classés sous le poste 5110 ;
- b) les taxes sur l'électricité, le gaz et l'énergie (classées sous le poste 5121 en tant qu'accises) ;
- c) les taxes sur les gains personnels tirés de jeux et paris (qui sont classées sous le poste 1120, en tant qu'impôts sur les gains en capital des personnes physiques et entreprises individuelles) et les montants forfaitaires perçus sur le transfert de loteries privées ou sur l'autorisation de créer des loteries (5200)¹⁷ ;
- d) les impôts sur les chèques et sur l'émission, le transfert ou le remboursement de valeurs mobilières, (qui sont classés sous le poste 4400, en tant qu'impôts sur les transactions mobilières et immobilières).

5127 – Autres impôts sur les transactions et les échanges internationaux

69. Ce sous-groupe couvre les recettes perçues par l'État sur l'achat et la vente de monnaies étrangères à des taux différents. Lorsque l'État exerce le privilège exclusif dont il dispose pour s'assurer une marge entre le prix d'achat et le prix de vente de devises qui ne se réduit pas à la simple couverture des frais administratifs, ce bénéfice représente un prélèvement obligatoire imposé dans des proportions indéterminées à l'acheteur et au vendeur des monnaies étrangères. Il équivaut normalement au droit à l'importation et au droit à l'exportation perçus dans un système de taux de change unique, ou à une taxe sur la vente ou l'achat de monnaies étrangères. Comme les bénéfices des monopoles fiscaux et des monopoles d'importation ou d'exportation transférés à l'État, il représente l'exercice d'un monopole aux fins d'imposition et est inclus dans les recettes fiscales.

70. Ce sous-groupe comprend aussi les bénéfices des monopoles d'exportation ou d'importation, bien qu'il n'en existe pas dans les pays de l'OCDE, les impôts sur l'achat ou la vente de devises et tous les autres impôts perçus spécifiquement sur les opérations ou les échanges internationaux.

5128 – Autres impôts sur des biens et services déterminés

71. Cette rubrique comprend les impôts sur l'extraction de minéraux, combustibles fossiles et autres ressources non renouvelables provenant de gisements privés ou détenus par une autre administration, ainsi que toute autre recette non ventilable provenant des impôts sur des biens et services déterminés. Les impôts sur l'extraction de ressources non renouvelables correspondent généralement à un montant forfaitaire par unité de qualité ou de poids, mais peuvent être calculés ad valorem. Les impôts sont comptabilisés à la date

d'extraction des ressources. Les versements tirés de l'extraction de ressources non renouvelables issues de gisements appartenant à l'administration publique qui perçoit ces versements sont classés en tant que loyers.

5200 – Impôts sur l'utilisation des biens ou l'autorisation d'utiliser des biens ou d'exercer des activités

72. Ce sous-groupe comprend les taxes prélevées en raison de l'utilisation de biens, indépendamment des impôts frappant les biens eux-mêmes. Contrairement à ceux-ci (5100), les impôts du sous-groupe 5200 ne sont pas calculés d'après la valeur des biens, mais ordinairement d'après un montant forfaitaire. Sont aussi couverts les impôts perçus au titre du droit d'utiliser des biens ou d'exercer des activités, comme les taxes sur la pollution qui ne reposent pas sur la valeur de biens déterminés. Il est parfois difficile de distinguer les taxes d'utilisation et droits de licence obligatoires, qui sont considérés comme des impôts, de ceux qui ne le sont pas parce qu'ils sont assimilés à des recettes non fiscales ; les critères appliqués sont ceux indiqués aux §9 et §10.

73. Bien que le sous-groupe se réfère à l'utilisation des biens, le fait générateur de l'impôt peut être aussi bien l'enregistrement de la propriété, de sorte que les impôts relevant de ce sous-groupe peuvent viser la possession d'animaux ou de biens plutôt que leur utilisation (par exemple, les chevaux de course, les chiens, les véhicules à moteur) et même s'appliquer à des biens inutilisables (comme les véhicules à moteur ou les fusils inutilisables).

74. Les cas limites concernent :

- a) les impôts sur l'autorisation d'exercer des activités commerciales, qui sont classés selon les règles exposées au §77 lorsqu'ils ont une assiette mixte associant le revenu, les salaires versés ou le chiffre d'affaires ;
- b) les impôts sur la propriété ou l'utilisation de la propriété de biens visés par les postes 4100, 4200 et 4600 ; le poste 4100 ne vise que les impôts sur la propriété ou la location de biens immobiliers et, contrairement aux impôts du sous-groupe 5200, ils sont fonction de la valeur du bien ; les impôts sur l'actif net et les impôts sur les biens meubles des sous-groupes 4200 et 4600 visent la propriété et non pas l'utilisation des biens, couvrent un groupe d'actifs et non pas de biens particuliers et sont aussi fonction de la valeur du bien.

5210 – Impôts périodiques sur l'utilisation de biens ou sur l'autorisation d'utiliser des biens ou d'exercer certaines activités

75. Ces impôts ont pour principale caractéristique d'être perçus à intervalles réguliers et de représenter ordinairement des montants forfaitaires. Le poste le plus important, du point de vue du volume des recettes, est constitué par les permis de circulation des véhicules. Ce sous-groupe inclut aussi les taxes perçues lors de la délivrance de permis de chasse, de tir ou de pêche, ou l'autorisation de vendre certains produits, ainsi que les taxes sur la possession de chiens et sur la prestation de certains services à condition qu'elles répondent aux critères définis aux §9 et §10. Les subdivisions du poste 5210 comprennent les taxes d'utilisation de véhicules à moteur à la charge des ménages (5211) et à la charge d'autres agents (5212)¹⁸. Le poste 5213 couvre les plaques de chiens et les taxes perçues pour l'autorisation d'exercer certaines activités, comme la vente de viande et d'alcool, lorsque les prélèvements ont un caractère périodique. Il couvre aussi les permis généraux de chasse, de port d'armes et de pêche, lorsque le droit d'exercer ces activités n'est pas accordé au titre d'une opération

commerciale normale (par exemple, la délivrance du permis ne comporte pas le droit d'utiliser une parcelle déterminée de terrain appartenant à l'État).

5220 – Impôts non périodiques sur l'utilisation de biens ou sur l'autorisation d'utiliser des biens ou d'exercer certaines activités

76. Cette rubrique recouvre les taxes non périodiques perçues sur l'utilisation de biens ou sur l'autorisation d'utiliser des biens ou d'exercer certaines activités et celles qui sont prélevées chaque fois que des biens sont utilisés.

- Les impôts prélevés sur l'émission ou le rejet dans l'environnement de gaz toxiques, liquides nocifs ou autres substances dangereuses figurent ici. Les paiements au titre des permis d'émission négociables délivrés par les administrations publiques dans le cadre des dispositifs de plafonnement et d'échange doivent également être comptabilisés sous cette rubrique au moment où les émissions sont produites. Les permis délivrés gratuitement par les administrations ne donnent lieu à aucun enregistrement comptable de recettes.
- La comptabilisation en droits constatés implique un éventuel délai entre la date à laquelle l'administration perçoit le règlement des permis et la date à laquelle les émissions sont produites. Dans les comptes nationaux, ce délai se traduit pour l'administration par un engagement financier sur la période.
- Il convient d'exclure les paiements effectués au titre de la collecte et de l'élimination de déchets ou de substances nocives par les autorités publiques, étant donné qu'il s'agit là de vente de services aux entreprises.

77. D'autres impôts non périodiques qui relèvent du poste 5200 sont aussi classés dans cette rubrique. Ainsi figurent les paiements uniques effectués au titre de l'autorisation de vendre des boissons alcoolisées ou des tabacs ou d'ouvrir des guichets de « paris mutuels », à condition qu'ils répondent aux critères définis aux §9 et §10.

6000 – Autres impôts

78. Ce groupe couvre les impôts prélevés sur une ou plusieurs bases différentes de celles qui sont indiquées pour les groupes 1000, 3000, 4000 et 5000, ou sur des bases dont aucune ne pourrait être considérée comme étant essentiellement la même que l'une de celles afférentes à ces groupes. Quant aux impôts perçus sur plusieurs bases différentes, il convient si possible d'évaluer les recettes liées à chaque base de perception (par exemple, pour l'impôt allemand « *Gewerbesteuer* ») et d'inclure les montants séparés dans le groupe approprié. S'il est impossible d'évaluer les montants séparés, mais si l'on sait que la plus grande partie des recettes provient de l'impôt perçu sur une même base, la totalité des recettes sont classées en fonction de cette base. Si aucune de ces procédures ne peut être appliquée, les impôts sont classés dans le présent groupe. Les sous-groupes peuvent comprendre également les recettes provenant d'impôts que les administrations ne sont pas en mesure d'identifier ou d'isoler (voir §27). Figurent aussi dans ce groupe les recettes provenant d'amendes et de pénalités acquittées pour infraction aux réglementations fiscales, mais qui ne peuvent être identifiées comme se rapportant à une catégorie particulière d'impôts (voir §14). Ce poste est divisé en impôts exclusivement ou principalement à la charge des entreprises (6100) et en impôts à la charge d'autres contribuables (6200).

A.6. Conciliation avec les comptes nationaux

79. Cette section des tableaux permet de concilier les calculs des recettes fiscales totales de l'OCDE et l'ensemble des impôts et cotisations sociales versés aux administrations publiques qui sont enregistrés dans les comptes nationaux par pays. Lorsque le pays en question est membre de l'Union européenne (UE) la comparaison est effectuée entre les calculs des recettes fiscales totales des pays de l'OCDE et la somme des recettes fiscales et cotisations de sécurité sociale perçues par les administrations publiques et les institutions des secteurs de l'Union européenne des comptes nationaux.

A.7. Poste pour mémoire relatif au financement des prestations de sécurité sociale

80. Le rapport entre les impôts et les cotisations de sécurité sociale étant variable, et en raison des problèmes évoqués aux §34 et §40, on a réuni dans un poste pour mémoire l'ensemble des versements affectés à des prestations du type sécurité sociale, en dehors des versements volontaires au secteur privé. Les données sont présentées de la façon suivante (voir la section 4.2) :

- a) impôts du groupe 2000 ;
- b) impôts affectés aux prestations de sécurité sociale ;
- c) cotisations volontaires à l'administration ;
- d) cotisations obligatoires au secteur privé.

Les §34 et §40 ci-dessus contiennent des directives pour la ventilation entre ces quatre catégories.

A.8. Poste pour mémoire relatif aux impôts identifiables payés par les administrations

81. Les impôts effectivement payés par les administrations elles-mêmes et que l'on peut identifier sont indiqués dans un poste pour mémoire et classés suivant les grandes rubriques de la classification des impôts de l'OCDE. Dans la très grande majorité des pays, seuls peuvent être identifiées en l'occurrence les cotisations de sécurité sociale et les impôts sur les salaires, mais il s'agit là en général des impôts les plus importants acquittés par les administrations (voir la section 4.3 de cette publication).

A.9. Rapport de la classification des impôts de l'OCDE avec les systèmes nationaux de comptabilité nationale

82. Un système de comptabilité nationale (SCN) tend à fournir un cadre cohérent pour enregistrer et présenter les principaux flux relatifs à la production, à la consommation, à l'accumulation et aux transactions extérieures d'une zone économique donnée, d'ordinaire un pays ou une grande région d'un pays. Les recettes publiques sont une partie importante des transactions enregistrées dans le SCN. La version finale du SCN 2008 a été diffusée conjointement par cinq organisations internationales : les Nations Unies, le Fonds Monétaire International, l'Union européenne, l'Organisation de Coopération et de Développement Économiques et la Banque Mondiale, en août 2009. Le Système est un ensemble complet, cohérent et souple de comptes macro-économiques. Il est élaboré pour être utilisé dans les pays à économie de marché quel que soit leur niveau de développement économique ainsi que dans les pays en transition vers l'économie de

marché. De larges extraits du cadre théorique ainsi que les définitions des divers secteurs de l'économie du SCN figurent dans la classification des impôts de l'OCDE.

83. Il existe cependant un certain nombre de différences entre la classification des impôts de l'OCDE et les concepts du SCN qui sont indiqués ci-dessous. Ils proviennent du fait que l'objectif de cette classification est de permettre une ventilation aussi large que possible des données statistiques pour ce que les administrations fiscales conviennent de considérer de manière générale comme des impôts :

- a) l'OCDE inclut les cotisations obligatoires de sécurité sociale payées aux administrations publiques dans les recettes fiscales totales ; les cotisations sociales volontaires et imputées ainsi que celles versées aux caisses privées ne sont pas considérées comme des impôts (§7 et §8 ci-dessus) ;
- b) les avis diffèrent sur la question de savoir s'il y a lieu de classer certains prélèvements et redevances dans les impôts (§9 et §10 ci-dessus) ;
- c) l'OCDE exclut les impôts imputés ou les subventions résultant d'opérations de taux de change officiels multiples et ceux résultant du fait que la banque centrale paye un taux d'intérêt sur les réserves obligatoires différent des autres taux du marché ;
- d) il existe des différences dans le traitement des crédits d'impôt récupérables.

84. Comme on l'a noté aux §1 et §2, les groupes 1000 à 6000 de la classification de l'OCDE comprennent tous les versements sans contrepartie aux administrations publiques, à l'exclusion des prêts obligatoires et des amendes. On peut obtenir le total de ces versements sans contrepartie, amendes incluses, mais prêts obligatoires exclus, en additionnant les postes suivants du SCN 2008 :

- impôts du type valeur ajoutée (D.211) ;
- droits et taxes sur les importations à l'exclusion de la TVA (D.212) ;
- droits sur les exportations (D.213) ;
- taxes sur les produits, à l'exclusion de la TVA, des droits sur les importations et les exportations (D.214) ;
- autres impôts sur la production (D.29) ;
- impôts sur le revenu (D.51) ;
- autres impôts périodiques (D.59) ;
- cotisations de sécurité sociale (D.61) à l'exclusion des cotisations volontaires ;
- impôts sur le capital (D.91).

A.10. La classification des impôts de l'OCDE et le système du Fonds monétaire international (GFS)

85. Le champ d'application et l'évaluation des recettes fiscales dans le système GFS et dans le système SCN 2008 sont très proches. Par conséquent, les différences entre la classification de l'OCDE et celle du SCN 2008 (voir §83 ci-dessus) sont également valables pour le GFS. En outre, le Fonds monétaire international subdivise le groupe 5000 de la classification de l'OCDE en une Section IV (Taxes intérieures sur les biens et services) et une Section V (Taxes sur les transactions et les échanges internationaux). Cela tient à ce que le rendement de ces dernières taxes représente généralement des sommes infimes dans les pays de l'OCDE ce qui n'est pas le cas dans beaucoup de pays non membres.

A.11. Comparaison de la classification des impôts de l'OCDE et des autres classifications internationales des recettes publiques

86. Le tableau ci-dessous décrit point par point la comparaison entre la classification des impôts de l'OCDE et les classifications suivantes :

- i) système des comptes nationaux (SCN 2008) ;
- ii) système européen des comptes (SEC 2010) ;
- iii) manuel de statistiques des finances publiques du Fonds monétaire international (MSFP 2014).

87. Ces comparaisons correspondent à celles qui devraient s'appliquer dans la majorité des cas. Toutefois, en pratique il faut faire preuve d'une certaine souplesse dans leur application. En effet, dans certains cas, les pays peuvent adopter des méthodes diverses de classification des recettes dans les comptes nationaux.

	OECD Classification		2008 SNA	2010 ESA	GFSM 2014
1000	Impôts sur le revenu, les bénéfices et les gains en capital				
	1100	Personnes physiques

A.12. Répartition des recettes fiscales par sous-secteurs d'administration publique

88. La classification de l'OCDE appelle une ventilation des recettes fiscales par sous-secteurs d'administration. On trouvera ci-après la définition de chaque sous-secteur et les critères à utiliser pour répartir entre eux les recettes fiscales. Ces définitions et critères suivent les orientations qui figurent dans le SCN 2008 et le MSFP 2014.

Sous-secteurs des administrations publiques à identifier

a) Administration centrale

89. Le sous-secteur des administrations centrales groupe tous les ministères, bureaux, établissements et autres organismes qui sont des services ou des moyens d'action du pouvoir central et dont la compétence s'étend à la totalité du territoire, à l'exception de l'administration des caisses de sécurité sociale. L'administration centrale a donc le pouvoir de prélever des impôts sur toutes les unités résidentes et non résidentes exerçant des activités économiques à l'intérieur du pays.

b) Administration d'un État fédéré, d'une province ou d'une région

90. Ce sous-secteur comprend les unités administratives intermédiaires et inclut toutes les unités administratives dont la compétence s'exerce indépendamment de l'Administration centrale sur une partie du territoire englobant un certain nombre de petites localités, à l'exception des caisses de sécurité sociale. Dans les pays unitaires, les administrations régionales peuvent être considérées comme dotées d'une existence distincte lorsqu'elles disposent d'une autonomie substantielle pour percevoir une part importante de leurs recettes de sources placées sous leur contrôle et lorsque leurs agents ne sont pas soumis à un contrôle administratif externe dans l'exercice des activités de l'unité.

91. Actuellement, les pays à structure fédérale représentent la majorité des cas dans lesquels les recettes attribuées aux unités administratives intermédiaires sont identifiées séparément. L'Espagne est le seul pays à structure unitaire qui se trouve dans cette situation. Dans les autres pays unitaires, les recettes des administrations régionales sont incluses dans celles des administrations locales.

c) Collectivités locales

92. Ce sous-secteur comprend toutes les autres unités administratives exerçant une compétence indépendante sur une partie du territoire d'un pays, à l'exception des administrations des caisses de sécurité sociale. Il englobe les diverses circonscriptions urbaines et/ou rurales (par exemple les collectivités locales, les municipalités, les villes, les bourgs ou les districts).

d) Caisses de sécurité sociale

93. Les caisses de sécurité sociale constituent un sous-secteur distinct des administrations publiques. Le sous-secteur de la sécurité sociale est défini dans le SCN de 2008 par les extraits suivants des paragraphes 4.124 à 4.126 et 4.147 :

« Les systèmes de sécurité sociale sont des systèmes d'assurance sociale qui couvrent l'ensemble de la collectivité ou d'importants sous-ensembles de la collectivité : ces systèmes sont imposés et contrôlés par les administrations publiques. Ces systèmes couvrent une grande variété de programmes qui consistent à fournir des prestations, en

espèces ou en nature, au titre des circonstances suivantes : vieillesse, invalidité ou décès, survie, maladie et maternité, accident du travail, chômage, allocations familiales, soins de santé, etc. Il n'existe pas nécessairement de lien direct entre le montant de la cotisation versée par un particulier et les prestations qu'il est susceptible de recevoir » (paragraphe 4.124).

« Lorsque les systèmes de sécurité sociale ont une organisation distincte des autres activités des administrations publiques et détiennent des actifs et des engagements indépendamment de ces dernières et effectuent des opérations financières pour leur propre compte, ils peuvent être considérés comme des unités institutionnelles désignées sous le nom de caisses de sécurité sociale » (paragraphe 4.125).

« Il est possible de faire varier de façon discrétionnaire les montants prélevés et versés sous forme de cotisations de sécurité sociale et de prestations afin d'atteindre des objectifs de politique publique qui n'ont pas de lien direct avec la notion de sécurité sociale en tant que système visant à fournir des prestations à des membres de la collectivité. Ainsi, ces cotisations ou prestations peuvent être augmentées ou diminuées afin d'influer sur le niveau de la demande globale au sein de l'économie. Néanmoins, tant que ces caisses restent indépendantes, elles doivent être traitées comme des unités institutionnelles distinctes dans le SCN » (paragraphe 4.126).

« Le sous-secteur des administrations de sécurité sociale comprend les administrations de sécurité sociale opérant à tous les niveaux des administrations publiques. Les administrations de sécurité sociale sont des systèmes couvrant l'ensemble de la collectivité ou d'importants sous-ensembles de la collectivité qui sont rendus obligatoires et contrôlés par des administrations publiques » (paragraphe 4.147).

94. Cette définition des administrations de sécurité sociale est suivie dans la classification de l'OCDE à l'exception des régimes suivants :

- les régimes imposés par l'administration et exploités par des organismes extérieurs au secteur des administrations publiques, tel qu'il est défini au §3 de ce manuel ; et
- les régimes qui perçoivent des cotisations volontaires.

Autorités supranationales

95. Ce sous-secteur s'applique aux activités de collecte de recettes publiques des autorités supranationales sur le territoire d'un pays. En pratique, le seul cas d'autorité supranationale de la zone de l'OCDE est celui des institutions de l'Union européenne (UE). Depuis 1998, les autorités supranationales ne figurent plus dans les *Statistiques des recettes publiques* dans un souci de cohérence avec la définition du SCN des administrations publiques qui les exclut. Par exemple, les impôts sur le revenu et des contributions de sécurité sociale rassemblées par des Institutions européennes et payé par les fonctionnaires européens qui sont résidents de pays membres de l'Union européenne ne devraient pas être inclus. Toutefois, les prélèvements spécifiques versés par les États membres à l'Union européenne continuent à être inclus dans les recettes fiscales totales et ils sont indiqués sous cette rubrique.

Critères à utiliser pour l'attribution des recettes fiscales

96. Lorsqu'une administration collecte l'impôt et le reverse, en totalité ou en partie, à d'autres administrations, il est nécessaire de déterminer si ces recettes doivent être considérées comme étant celles de l'administration qui les perçoit et les répartit entre

d'autres administrations ou celles des administrations bénéficiaires auxquelles l'administration qui les a perçues les a transférées en simple qualité d'agent. Les critères à utiliser dans l'attribution des recettes sont indiqués aux paragraphes 97 à 100, qui reprennent les paragraphes 3.70 à 3.73 du SCN 2008.

97. En général, un impôt est attribué à l'Unité administrative qui :

- a) exerce le pouvoir de percevoir l'impôt (soit en tant que détenteur de ce pouvoir soit par délégation de l'autorité qui le détient) ;
- b) dispose du pouvoir discrétionnaire final de fixer et de faire varier le taux de l'impôt.

98. Lorsqu'une somme est collectée par une administration au profit d'une autre administration et en son nom, et que cette dernière a le pouvoir de percevoir l'impôt et de fixer et de faire varier son taux, la première intervient comme agent pour le compte de la dernière et l'impôt est réaffecté. Toute somme retenue par l'administration collectrice au titre des frais de recouvrement doit être considérée comme la rémunération d'un service rendu. Toute autre somme conservée par l'administration collectrice, notamment dans le cadre d'un accord de partage d'impôt, doit être considérée comme une subvention courante. Si l'administration collectrice s'est vu déléguer le pouvoir de fixer et de faire varier le taux, le montant recouvré doit être considéré comme une recette fiscale de cette administration.

99. Lorsque des administrations différentes fixent conjointement et sur un pied d'égalité la répartition du produit de cet impôt, aucune administration ne disposant d'un pouvoir prépondérant en dernier ressort, les recettes fiscales sont attribuées à chaque administration en fonction de sa part respective du produit de l'impôt. Si un accord permet à une unité administrative d'exercer un pouvoir prépondérant en dernier ressort, la totalité des recettes fiscales est attribuée à cette unité.

100. Dans certains cas aussi, un impôt est perçu dans le cadre des compétences d'une administration qui résulte de la constitution ou d'autres dispositions mais d'autres administrations fixent individuellement le taux d'imposition sur leurs territoires. Le produit de l'impôt généré sur les territoires respectifs de chaque administration est attribué à l'administration en question comme constituant ses recettes fiscales.

Versements effectués par les États membres de l'Union européenne

101. Les versements effectués par les États membres de l'Union européenne prennent la forme de prélèvements spécifiques qui comprennent :

- a) les droits de douane et les prélèvements agricoles (5123) ;
- b) les montants compensatoires monétaires bruts (5123 si relatifs aux importations et 5124 si relatifs aux exportations) ; et
- c) les prélèvements de la CECA, les cotisations sucre et les taxes de co-responsabilité sur le lait (5128).

102. Les droits de douane collectés par les États membres pour le compte de l'Union européenne sont comptabilisés :

- sur une base qui ne tient pas compte des droits d'encaissement ;
- en utilisant des chiffres corrigés de manière à exprimer les droits sur la base de la « destination finale » et non du « pays de première entrée » lorsque de telles corrections sont possibles ; ces corrections concernent en particulier les droits prélevés dans des ports (maritimes) importants ; bien que les droits de l'UE soient prélevés par les autorités du

pays de première entrée, ces droits doivent être dans la mesure du possible déduits des recettes du pays qui les recouvre et inclus dans les recettes du pays de destination finale.

103. Ces droits de l'UE sont le plus clairement conformes au critère d'attribution décrit au §95 ci-dessus. En conséquence, à partir de 1998, ces montants sont mentionnés dans une note de bas de page à titre de rubrique « Pour mémoire » dans les tableaux des États membres de l'UE (chapitre 4 du Rapport) et ne figurent plus sous la rubrique 5123. Toutefois, ces montants sont inclus dans les grands totaux des recettes fiscales à la ligne supérieure pour toutes les années indiquées dans les tableaux.

A.13. Classification provisoire des recettes provenant des prélèvements sur les banques et des contributions aux mécanismes de garantie des dépôts et de stabilité financière

104. L'OCDE a provisoirement adopté, depuis l'édition 2012 de ses *Statistiques des recettes publiques*, le principe suivant concernant l'enregistrement comptable des recettes issues des prélèvements sur les banques ainsi que des redevances acquittées au titre de la garantie des dépôts et de la stabilité financière. Il est recommandé que les montants concernés soient comptabilisés à la rubrique 5126.

- Les redevances de stabilité, les prélèvements sur les banques et les contributions à la garantie des dépôts, qu'il est obligatoire d'acquitter, doivent généralement être traitées comme des recettes fiscales lorsque les versements sont effectués au profit de l'administration publique et affectés au budget consolidé ou général des administrations de sorte que les pouvoirs publics soient libres d'utiliser les fonds sans délai aux fins qu'ils jugent opportunes. Ce principe s'appliquerait indépendamment du fait que l'administration promette ou non d'effectuer des versements pour garantir les dépôts des clients des établissements bancaires si la situation l'exigeait à l'avenir.
- Si les paiements obligatoires sont effectués au profit de l'administration publique et imputés à des budgets dont les ressources doivent être entièrement réaffectées au secteur de l'économie qui englobe les entreprises assujetties à ces paiements, ceux-ci seront toujours traités, en règle générale, comme des recettes fiscales étant donné que les fonds seraient disponibles pour l'administration et réduiraient son déficit budgétaire, que la redevance est sans contrepartie pour les entités individuelles et que les montants collectés pourraient être dissociés de tout versement en faveur des déposants ou de toute dépense visant à soutenir plus largement le secteur financier.
- Les contributions aux mécanismes traditionnels de moindre envergure destinés à garantir les dépôts de « détail », contributions dont le montant est aligné sur le coût de la garantie, doivent être classées en tant que redevances pour services rendus.
- Tout versement au titre de la réalisation par une administration des actifs d'un établissement en faillite ou du recouvrement par cette administration d'une créance prioritaire sur les actifs de l'établissement en cours de liquidation, effectué en vue de financer l'indemnisation des clients ayant perdu leurs dépôts, serait traité comme une redevance par opposition aux recettes fiscales.
- Les contributions obligatoires aux fonds administrés en-dehors du secteur public et aux organismes non étatiques bénéficiant du soutien des institutions collectrices de dépôts ainsi que toutes les contributions aux mécanismes volontaires ne doivent pas être traitées comme des recettes fiscales.

Notes

1. Toutes les références au SCN concernent l'édition de 2008.
2. Se reporter à la section A.12 de ce manuel pour l'examen de cette notion.
3. Il est en général possible d'identifier les montants des cotisations de sécurité sociale et les impôts sur les salaires, mais pas les autres impôts payés par les administrations.
4. En revanche, si un ou plusieurs pays considèrent comme un impôt, un droit que la plupart des pays font entrer dans les recettes non fiscales ou qui procure des recettes substantielles, les montants ainsi perçus figureront dans une note de renvoi à la fin des tableaux par pays correspondants, même s'ils ne sont pas inclus dans le total des recettes fiscales.
5. Les appellations peuvent cependant être souvent trompeuses. Ainsi, une redevance de passeport sera normalement considérée comme une recette non fiscale, alors qu'un prélèvement additionnel sur les passeports (comme c'est le cas au Portugal), qui a pour but de procurer un montant substantiel de recettes eu égard au coût de délivrance du passeport, sera considéré comme un impôt du sous-groupe 5200.
6. On trouvera des précisions sur cette distinction dans l'étude spéciale intitulée « L'information sur les recettes fiscales : Problèmes actuels », de l'édition de 2001 des *Statistiques des recettes publiques*.
7. On utilise parfois les expressions « non remboursable » et « remboursable », mais il peut paraître illogique de parler de « remboursement » lorsque rien n'a été versé.
8. Toutefois, dans les systèmes d'imputation de l'impôt sur les sociétés, les crédits d'impôts récupérables sont traités différemment (§31-33).
9. Il ne s'agit pas d'une véritable dépense fiscale au sens strict. De telles dépenses fiscales supposent que l'on identifie un système fiscal de référence pour chaque pays ou, de préférence, une norme internationale commune. En pratique, il n'a pas été possible de parvenir à un accord sur une norme internationale commune.
10. Sauf s'ils sont calculés sur le bénéfice résultant de la vente, auquel cas ils seraient classés parmi les impôts sur les gains en capital dans le sous-groupe 1120 ou 1220.
11. Dans certains pays, la même législation est applicable aux personnes physiques et aux entreprises dans le cas d'impôts sur le revenu particuliers. Cependant, les recettes procurées par ces impôts peuvent, en général, être ventilées et figurent donc dans les deux sous-groupes appropriés.
12. Ainsi, « celles qui sont suffisamment autonomes et indépendantes pour que leur fonctionnement soit comparable à celui d'une société [...] (y compris) la tenue de comptes complets » (SCN 2008, Section 4.44).
13. Au Canada – pays généralement considéré comme appliquant un système d'imputation – le crédit d'impôt (non récupérable) offert à l'actionnaire concerne l'impôt national sur les sociétés censé avoir été acquitté, qu'un impôt sur les sociétés soit ou ne soit pas dû. Comme, dans ces systèmes, il n'y a aucun lien complet entre le montant de l'impôt sur le revenu, ces crédits pour les dividendes sont traités, comme les autres crédits d'impôt, selon les principes exposés au §20.
14. Il peut en être ainsi lorsqu'un régime en faveur des administrations existait avant l'instauration d'un régime général de sécurité sociale.
15. Dans le SCN 2008, ils sont considérés comme des transferts en capital et non pas comme des impôts (voir section A.8).
16. Système selon lequel l'Union Européenne ajuste les effets des différences entre les taux de change utilisés pour fixer les prix des produits agricoles dans le cadre de la politique agricole commune, et le taux de change réel. Les paiements effectués selon ce système portent sur les importations ou les exportations; lorsqu'ils sont identifiables, ces montants figurent dans la rubrique appropriée (5123 ou 5124). Dans ce *Guide*, sont inclus les montants bruts, c'est-à-dire sans déduction d'aucune prime payée par le SMC.
17. Les transferts de bénéfices de loteries d'État sont considérés comme des recettes non fiscales (voir aussi §63).
18. Voir à ce sujet le §25 c).

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

The OECD is a unique forum where governments work together to address the economic, social and environmental challenges of globalisation. The OECD is also at the forefront of efforts to understand and to help governments respond to new developments and concerns, such as corporate governance, the information economy and the challenges of an ageing population. The Organisation provides a setting where governments can compare policy experiences, seek answers to common problems, identify good practice and work to co-ordinate domestic and international policies.

The OECD member countries are: Australia, Austria, Belgium, Canada, Chile, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Latvia, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The European Union takes part in the work of the OECD.

OECD Publishing disseminates widely the results of the Organisation's statistics gathering and research on economic, social and environmental issues, as well as the conventions, guidelines and standards agreed by its members.

ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

L'OCDE est un forum unique en son genre où les gouvernements œuvrent ensemble pour relever les défis économiques, sociaux et environnementaux que pose la mondialisation. L'OCDE est aussi à l'avant-garde des efforts entrepris pour comprendre les évolutions du monde actuel et les préoccupations qu'elles font naître. Elle aide les gouvernements à faire face à des situations nouvelles en examinant des thèmes tels que le gouvernement d'entreprise, l'économie de l'information et les défis posés par le vieillissement de la population. L'Organisation offre aux gouvernements un cadre leur permettant de comparer leurs expériences en matière de politiques, de chercher des réponses à des problèmes communs, d'identifier les bonnes pratiques et de travailler à la coordination des politiques nationales et internationales.

Les pays membres de l'OCDE sont : l'Allemagne, l'Australie, l'Autriche, la Belgique, le Canada, le Chili, la Corée, le Danemark, l'Espagne, l'Estonie, les États-Unis, la Finlande, la France, la Grèce, la Hongrie, l'Irlande, l'Islande, Israël, l'Italie, le Japon, le Luxembourg, le Mexique, la Norvège, la Nouvelle-Zélande, les Pays-Bas, la Pologne, le Portugal, la République slovaque, la République tchèque, le Royaume-Uni, la Slovénie, la Suède, la Suisse et la Turquie. L'Union européenne participe aux travaux de l'OCDE.

Les Éditions OCDE assurent une large diffusion aux travaux de l'Organisation. Ces derniers comprennent les résultats de l'activité de collecte de statistiques, les travaux de recherche menés sur des questions économiques, sociales et environnementales, ainsi que les conventions, les principes directeurs et les modèles développés par les pays membres.

Revenue Statistics
SPECIAL FEATURE: CURRENT ISSUES
ON REPORTING TAX REVENUES
1965-2015

Data on government sector receipts, and on taxes in particular, are basic inputs to most structural economic descriptions and economic analyses and are increasingly used in economic comparisons. This annual publication gives a conceptual framework to define which government receipts should be regarded as taxes. It presents a unique set of detailed and internationally comparable tax data in a common format for all OECD countries from 1965 onwards.

Statistiques des recettes
publiques
ÉTUDE SPÉCIALE :
QUESTIONS ACTUELLES
SUR LA COMPTABILISATION
DES RECETTES FISCALES
1965-2015

Les données sur les recettes des administrations publiques, et sur le produit de la fiscalité en particulier, constituent la base de la plupart des travaux de description des structures économiques et d'analyse économique, et sont de plus en plus utilisées pour comparaisons internationales. Cette publication annuelle présente un cadre conceptuel dont le but est de définir les recettes publiques devant être assimilées à des impôts et de classer les différentes catégories d'impôts. Elle constitue également un ensemble unique de statistiques fiscales détaillées et comparables au niveau international, utilisant une présentation identique pour tous les pays de l'OCDE depuis 1965.

ÉGALEMENT DISPONIBLE EN LIGNE
