

Argentina: RUT - Single Tax Registry

Process

1. The taxpayer updates the data via a single web app;
2. The Arbitration Committee and several provincial tax administrations connect to the permissioned blockchain to keep an updated replica of the database of the Federal Taxpayer Registry;
3. In addition, the Arbitration Committee and the provincial tax administrations through web services provided by the Federal Administration of Public Revenue can update the Federal Taxpayer Registry

Benefits

In addition to the usual benefits of using a blockchain, the benefits of this federal tool, which facilitates and simplifies the tasks of the taxpayers and the tax administrations, are the following:

- The taxpayer does not have to provide data to several national and sub-national tax administrations;
- The information has a better quality, thus ensuring the principle of uniqueness of the data;
- There is a reduction in the administrative management time in the event of errors and/or inconsistencies;
- The cross verification between public agencies is possible
